Young's Strain S. C. W. Leghorns**I HAVE NO OTHER BREEDS**

My strain again for the sixth consecutive year shows its super-
iority by winning more prizes at Madison Square Garden, New
York, in the strongest competition ever known, than all others
combined, including 17 specials, and again winning the National
S. C. W. Leghorn silver cup. Two weeks later I almost duplicated
my wonderful win of last year at Boston by winning 9 prizes on
9 entries against the most prominent breeders of the east. My
winnings for 1906 at the world's two greatest shows are as follows:

BOSTON	NEW YORK
Pen—1st.	Pen—4th.
Pullets—4th.	Pullets—1st., 2nd, 5th.
Hens—st., 4th.	Hens—2nd.
Cockrels—1st, 2nd.	Cockrel—1st., 4th.
Cocks—1st, 2nd.	Cocks—1st., 3rd., 4th.

THIS RECORD has never been equalled by any other Leghorn breeder in America.

VOLUME XXV

NEW YORK, MARCH 3, 1906

NO. 640

SEBRIGHT BANTAMS

From The Feathered World—By R. Wiseman Cunningham, M. D.

In writing the following notes upon the Sebright, I tender my thanks to previous writers on the variety, to whom Sebright breeders owe so much for the valuable instruction that they have given. I feel, however, that mere writing will never satisfy those who are eager to receive accurate information, and for this reason I attach great importance to the photographic illustrations accompany my article as showing what cannot be conveyed to the mind by mere words. The photographs, of course, are taken from living birds.

Gold and silver Sebrights are undoubtedly the most beautiful and fascinating of all the Bantam tribe. The contrast in the color of well-marked birds is most attractive, and often must we marvel at the genius and artistic tastes of the man who conceived and succeeded in perfecting such an ideal. If all that is written about the Sebright is true, Sir John Sebright's Bantams were much nearer perfection than are those of the present day. This I cannot believe, for I doubt very much if the fancier of a hundred years ago were as particular in their examination and criticism of Sebrights as we now are.

The Sebright is supposed to be the outcome of various crosses and blendings of various breeds. Gold and silver Polands, Nankin and Rosecomb Bantams have all had something to do with their production. My own opinion is that gold and silver Polands and Nankin Bantams alone would produce the original Sebrights, and that Black and White Rosecombs were used afterwards to try and improve the coloring and reduce the size. Inbreeding would improve and stamp the variety as a new breed to be relied upon to reproduce its like.

At the present day there are some strains of Sebrights that approach in likeness the Golden Polands very closely, with neck and saddle hackle and a tail well furnished with long sickles; and there are only too many with white in ear-lobes and black under tails, showing the black rosecomb cross. Any cross-breeding nowadays would ruin the breed. Change of blood is easy to obtain when necessary, as there are many strains, some of them having quite their own characteristic features.

I think that for purity of ground color the Scotch Sebright cannot be beaten, and it is very rare to see the northern birds showing creaminess of color in any part of the feathering in silvers. I also consider that the many specimens of Scotch golds that I have seen are far more correct and even in

coloring than the English birds. Mr. Balmer, of Greenlaw, in Berwickshire, sent me a team of birds to look at before issuing this article in the F. W., and the ground color of all was most perfect, and these were not selected specimens, as he did not know for what purpose I desired the birds to be sent.

of the lacing in the golds, but all silvers that are the outcome of such a cross should be destroyed. A sappy yellow coloring in the feathering of quickly-moulted silvers is of quite a different shade, more lemon-yellow, and this must be allowed for in judging.

In the golds the color is a rich

MR. J. C. PRESTON'S COCKEREL AND PULLET
WINNERS OF MANY PRIZES

I consider that the Scotch judges encourage very finely-laced Sebrights far too keenly, not attaching sufficient importance to the density of black, although I admit a very finely-laced bird ought certainly to be encouraged if it has quality everywhere else—a most difficult point to attain. I have often been told by Mr. J. C. Preston, that "King of Sebright breeders," that color is the first point to consider in judging, and I quote his words:—"A Sebright is a bird of feather properties, of which color is of the first importance. All other properties must be considered as secondary."

Color.—In the silver Sebright the ground color of all the feathers proper, from the top of the head to the tail, must be of the purest silvery-white, not transparent white which shows the lacing of underlying feathers as dark lines through, but a thick, dense white.

In silvers it is common to see a creamy coloring in the secondaries and tail feathers which is to be condemned as showing a trace of gold blood in the strain. Crossing golds and silvers is sometimes resorted to in the attempt to improve the quality

golden-bay ground of exactly the same shade throughout the entire feathering. The common faults in the ground color of the golds are:—(a) Too pale in color, a sort of creamy-bay shade, or the opposite extreme, in which the color may be quite dark chestnut or brick-red. (b) Patchiness—i. e., some feathers pale golden-yellow, scattered here and there amongst feathers of the correct color, entirely destroying the general appearance of the bird, as dirty marks spoil new clothes. (c) Variation in shade of the feathers or different parts of the body, and this quite ruins the general appearance of the bird, however good the lacing may be. (d) Last, but not least, the ground color of each feather may vary in shade. This is a very common failing. Thus, from the multiplicity of failings in only this one property, and that the most important one—the ground color—we see that a gold Sebright is a much more difficult bird to breed to perfection than a silver of the same species. Ground color is the only property in which gold and silver Sebrights differ.

Lacing.—Every feather proper should be surrounded by an edging of

the most dense, shiny green-black, and this edge, or lacing, as it is called, must be very sharply defined. The finer the lacing the more beautiful is the effect, but it must be of the correct color, and perfectly even.

Very finely-laced Sebrights, at the present day, are nearly all brown-black or mossy in lacing—a most undesirable fault, and one which is next to impossible to stamp out of a strain. It is a matter of regret that many judges will have these excessively fine-laced birds without taking into consideration the quality of the lacing, and so, many Sebrights of quite the wrong type in color properties are winning, and will win, until all Sebright breeders are of the same mind.

The fluff about the roots of the feathers, the fluffy feathers covering the abdomen and thighs, should be greyish-black or grizzled, the darker the better, the soundest laced birds having the most black in the downy feathers—a good thing to remember from a breeder's point of view. Common defects in lacing, etc., are:—A white cap, with a white bib round the throat, is frequently seen in the best show birds, and gives rather an appearance of wearing a white night-cap with the strings tied around the throat. This fault is most reproductive, and therefore is one to be avoided, unless it exists only to a small degree, either in the show pen or in the breeding stock. White cap and bib exists in a very large number of very finely-laced Sebrights, and is an argument in favor of moderation in the width of the lacing. The shoulders or wing-butts often show a similar failing, the small feathers covering them often being almost devoid of lacing, and this frequently occurs in the white-throated specimens just described. Defective wing-butts and white throat very much reduce the chances of winning in good competition.

Lacing all round the secondaries comes next in importance, as any failure in the lacing of these feathers quite spoils the general appearance of a Sebright, and detracts considerably from its value as a breeding bird. It is in the lacing of the secondaries that the gold falls so far short of the silver Sebright, but they are rapidly improving in the hands of careful breeders, such as Messrs. Sergeantson, Balmer, Heywood, Airey, and others who have stuck to the task of improving their favorite under most discouraging circumstances—viz., that there is no classification for golds, except at a few of the larger shows.

Now we arrive at the tail feathers, which, next to the foregoing, most fre-

quently fail either partially or entirely in lacing. Some years ago we were quite content if we possessed a Sebright with a pure white or gold tail only tipped with black, so long as the ground color was perfectly clear. It is no longer so. We must now have a Sebright—at any rate, in the first year—with every feather of the tail well laced. To Mr. J. C. Preston we must give all credit for producing the most perfectly-laced tails that have been seen on Sebrights for many years past. His first and challenge cup Crystal Palace pullet, 1904, was perfect in this respect, and his first cockerel at the same exhibition was equally good. All Sebright breeders owe a debt of gratitude to Mr. Preston, not only for his skill in breeding Sebrights, but also for the sportsmanlike way in which he supports the Fancy, and parts with his best productions, which go to improve the quality of the Sebrights in all parts of the kingdom; and yet, notwithstanding this, Mr. Preston remains, and I hope long will remain, with us as our most dangerous rival. He does not, like so many fanciers in other varieties of Bantams, send a large team of birds to monopolize all the available prizes at a show, but sends one or two of his best, giving other men every opportunity to be in the money, even if they do not come out top. I do not wish it to be understood that other strains besides Mr. Preston's do not possess tail lacing—that would be quite wrong—but there is no other strain of Sebrights within my knowledge that has this property developed to such perfection.

Grizzling and spashing with black in the ground color of the tail is a great fault, and most difficult to eradicate. This is present in quite 60 per cent. of Sebrights, more so in golds than in silvers, and is always a good point to investigate when it is difficult to settle the winner between two birds equal in other respects. It is a failing which is evident to any novice, and cannot be argued away.

Feather lacing may still be defective in many other respects, such as:—(1) Crescent-shaped lacing—that is, lacing which is wide at the tips of the feathers, often disappearing altogether as the insertion of the feather is reached; this is an approach towards spangling. (2) Broken lacing—splashing of the ground color reaching to the very edge of the feather, giving it a broken appearance. (3) uneven lacing may present itself in yet another manner—i. e., when the lacing on one part differs in thickness from the lacing on another part—e. g., breast lacing fine, wing lacing heavy. (4) Double lacing, frequently seen in the breast feathers, and consists of an edging of white outside the black markings; this is an unsightly fault, and most difficult to eradicate by breeding. (5) The lacing may also be dense enough towards its inner margin, but show a smokiness round the very edge of the feathers. This is also a bad fault, but not so serious from a breeder's point of view as double lacing.

(To be Continued)

GREIDER'S FINE CATALOGUE
of Standard bred poultry for 1906, printed in beautiful colors, contains Fine Chromo, illustrates and describes 60 varieties. Gives reasonable prices for stock and eggs, tells all about poultry, their diseases, lice, etc. This book only 10 cents.
B. H. GREIDER, RHEEMS, PA.

WEEDS WANDERINGS.

An Old Time Fancier Favorite on the Job.

The relentless wild winds of Wednesday blew the sanctum door ajar and in swept a bunch of grey hair, a cheery face, and the rotund form of an old favorite with the readers of *The American Fancier*, and here is what he scribbled off after he had been thawed out in true Havemeyer Building style:

Well, I have got back home again, and am working for the good old standby, *The American Fancier*.

I wish to inform the readers of *The American Fancier* that I expect to visit each and every one of them before many moons have dimmed, for the purpose of securing favors in the advertising and subscription line, and, as I journey along, I shall make notes by the wayside of what I see and hear in standardbred stock features regardless of patronage, fear or favor, for I am commissioned to grind out a batch of news as I jog along, and *The American Fancier* pays the freight, lower berth, buffet car and all, and the old man feels like a broiler before it has had its neck twisted.

How does that strike you?

You don't know what a gay sort of town is little old New York until you strike the home of *The American Fancier* in this big scratching shed ycelpt the Havemeyer Building. There is Hutchings, the energetic, wide-awake business fellow; old "Drev," the reliable; Dennis, the urbane; and Carpenter, the steadfast, only thirty miles away, always on the telephone wire when wisdom is wanted, while the typewriters click a busy song as the keys are manipulated by fair fingers.

Now, don't that stir your blood?

But the Secretary says: "Weed, wander back to the woods! Smoke up, and go out on your first assignment! Take in New England, send everything in by Tuesday of each week, and may you finally rest in a feather bed in heaven and we be there to tuck you in! Good day! Turn to the right for the elevator!"

And I'm off with a happy heart, a full stomach, and joy and happiness to spread broadcast, for the President and the Editor have added a substantial Godspeed to carry me on my wanderings, of which you will hear from time to time.

GEORGE W. WEED,

Advertising and Subscription Representative.

A Strenuous Sawdust Story.

Frederick Morgan Davenport, Professor of Political Science at Hamilton College, at Clinton, New York, made a speech before the American Newspaper Publishers' Association, in this city, on the evening of Washington's Birthday.

After speaking of the newspaper as an organ of democracy, fraternity, and equality, Prof. Davenport concluded with this parable:

"Once there was a country newspaper man who mixed sawdust with the meal he fed his hens. He thought they would never know the difference. But they got even. When he came to set the eggs, half the brood hatched were woodpeckers. Whatsoever a newspaper soweth, that shall it also reap."

THE SCRANTON SHOW.

Successful Show Described by A. F. Pierce.

The Scranton show was a hummer. The average quality of the entire show was a whole block ahead of anything that I have ever had the pleasure of seeing at a first-class show. The entire management from the President down to the colored electrician at the door was "Johnny on the spot," and they thoroughly deserve the success they met with. The receipts after the first night was all velvet. The show was ably penned by Spratts. The only draw-back was the lack of size of the hall and poor light. The birds were penned three tiers high, and the judging had mainly to be done by artificial light. The boys are planning to hold the event at the Armory next year, the structure having the third largest floor space in the country.

The Exhibition Game Class was the largest we have handled this winter. The Black Red Class was good, the winners being nice colored typical shaped birds. The Second Cockerel Class was wonderfully tall, but poorly trimmed, and rather long in the body. The Brown Red Classes contained some birds of extra merit and the winning Golden Duckwing Cock, who also won in the Special for the best Exhibition game, was an exceptionally rich colored bird. Pit Games were there galore, and made a very strong exhibit. The White Leghorns were a very nice class, particularly the single combed. The winning cock was a remarkably fine specimen, and the winning pen was full of quality and exceptionally even. The Browns were of fair merit in males, the females being rather weak. Black Minorcas were of grand quality, the winning pullet being strikingly good. The Game Bantams were a show in themselves, as Scranton is the abiding place of one Ricker by name, and a Bantam crank by nature, and there are other cranks of the same specie residing in Scranton who are not far behind. The Black Red Class was, as usual, the strongest and the winning cock, hen, cockerel and pullet were all gems of the first water, the hen being the choicest of the lot. The winning Pyle Cockerel was a very tall, stylish, hard-feathered youngster, but a bit pale in color. The winning Duckwing Cockerel was as hard as nails, with nice style and reach, the color being a trifle severe. There were a lot of other good, grand birds in the different classes, but as these notes are from memory, we cannot particularize. In Ornamental Birds the Cochins were the strongest classes. The male birds were mostly of correct shade of buff, the females being exceptionally nice, an even colored bunch throughout. The pick of the entire Cochin Alley was the winning black hen. There were a few good Sebrights in gold and silver. The Buff Orpington Class was truly great, and many a good bird had to go without a ribbon. The winning cock was a particularly typical rich colored bird. The winning cockerel, hen and pullet were also magnificent. The winning pen was a very rich, even colored lot. Blacks were not a very large class, but the winning cock was simply a dream, and won the Challenge Cup for the best bird in the show.

A. F. PIERCE.

ARTIFICIAL INCUBATION.

In natural incubation examinations have show that the daily evaporation of water is on an average 0.8 per cent. of the initial weight of the eggs. With incubators the evaporation of water is either greater or less, the explanation of this being that one cannot realize to perfection the natural conditions and because the phenomena of evaporation are intimately connected with ventilation and the hygrometric state of the chamber in which the machine is placed, and to the thickness of the shell, etc. These evaporations are most harmful to the regular development of the chickens when they exceed the natural limits before indicated. One has tried to remedy this by affixing to the incubator a hygrometer which registers the state of the humidity of the atmosphere enveloping the eggs. The results were not satisfactory, and it appears that the best means of testing the state of the atmosphere is to periodically weigh the eggs. This plan is simple, easy, and practical, and within the reach of all. It is not necessary to have the weights absolutely exact, discrepancies of several grammes being of no importance. For convenience the eggs are placed in small wooden cases, exactly weighed in advance. If the diminution of the weight is very slight, it shows that the evaporation is not normal; it is sufficient then to augment the ventilation to make a little less humidity in the machine, in order to put matters right. If, on the other hand, the loss of weight is too great, one reduces the ventilation, and thus augments the evaporation. A point of great importance is to avoid the excessive evaporation of eggs during the last days of incubation. It is not necessary that the deposition of the artificial hatcher may be such that some eggs endure a greater evaporation than others; the result would be a compromise. One obviates this, more over, in practice by changing the place of the eggs in consequence of the varying temperature at the entrance of the incubator. With the aid of these purely scientific hints one ought to be able to conduct an incubator with much more security than formerly; and everything goes to show that the experiences of Zuntz render real services to the practical breeding of poultry. It is necessary to call attention to taking note of the weight of the clear eggs, if one withdraws them, as is the custom, at the end of the first week, this elimination modifying the weights.

Docile Ducks of the Chinese.

In China the duck is much esteemed as an article of diet, and what may be called duck farms are common on most of the rivers. The birds are taught to hunt for their food, and the rearing of the costs little. They are kept in boats with a platform, or deck, extending outward on each side. These boats are taken to the shallow, marshy parts by the banks of the streams, and the ducks are then driven ashore to enjoy themselves in the mud flats. So well are the birds trained that at a given signal they cease eating and follow their leader back into the boat, where they lie during the night. Ducks preserved by being salted are a favorite food with the well-to-do.

That new eagle on the title page is a pretty vigorous looking bird. Blame it on Mr. Gill of the Gill Engraving Company, New York. The new title head is the work of the latter fine concern. Nuff ced.

* * *

Now, see here, brother and sister fanciers, let's get to work and try to have a live weekly poultry paper. Send in news and, better yet, subscriptions. Get everybody interested and let us have a real old fashioned weekly chat every issue. In England there are no monthly poultry papers—they are all weeklies. In this country all are monthlies. I except one semi-monthly and The American Fancier, which has, barring some months of incubation, always been a weekly. It will always be such in the future. The price is one dollar a year—less than two cents a week. Of course, no silver spoons, fountain pens or Alaska diamonds go with this dollar offering. Publishers, editors and printers, unlike actors, are compelled to eat.

* * *

We want live agents everywhere. Good men can make good money. Write for terms.

* * *

The picture of that White Wyandotte on the title page reminds us of a visit to Rock Hill Poultry Yards last week. We saw the bird at New York and the illustration is a good one. We saw him again at the above-mentioned place and there is no doubt of his quality. As Deacon Sparks would say, "He is all to the mustard."

* * *

We arrived at Ossining, N. Y., one grey and dismal morning and found Mr. Robert T. Dennis awaiting us. After several minutes of expectation, Mr. Harry M. Carpenter drove up with a Kentucky thoroughbred and a one and a half seater of a carriage and drove the party to Rock Hill Poultry Farm.

* * *

Rock Hill Poultry Farm is well named. It is built on rocks. But it has acres of ground where grass and pasture abounds, and a lake where ducks can poach their eggs. General McAlpin, the famous light in the tobacco interest of the United States, the man that fought the trust, started this plant, and with a lavish hand, expended thousands of dollars to make it the home of thousands of the finest chickens on the continent. He secured that young and hustling fancier Mr. F. W. Corey, to manage it, and he did well in doing so. We have known Mr. Corey for some time and his judgment on birds is first class. Furthermore, he knows how to handle and show them.

The records made by Rock Hill Poultry Farm at the big shows is history. We were delighted to look over the famous White Wyandotte winners at Madison Square, the great string of beautiful Silver Penciled Plymouth Rocks, the Partridge Wyandottes, White Leghorns and White Rocks. It was a sight to please every true fancier. A full description, with illustrations, of this beautiful plant will appear in a later issue of The American Fancier.

* * *

Messrs A. O. and B. O. Schilling, of Rochester, N. Y., have sold out their entire string of Buff Cochin Bantams to Mr. Frank W. Radford, of Wisconsin. This was probably the largest and best string of Buff Cochin Bantams in the United States. Having handled and judged the Schilling team more than once we know whereof we are speaking. We are glad that they pass into the hands of such a good fancier as Mr. Radford is known to be.

* * *

Doctor Ben Thornton is building up a great string of Game Bantams at the Short Hills Poultry Farm and when the snow flies next winter there will be something doing at the big eastern shows when the Doctor enters the show arena. Mr. Fincke, the proprietor of Short Hill Farm is sparing no expense to get the best blood in the world in the Game Bantam line. Now that Mr. Fincke is Secretary of the American Exhibition Game and Game Bantam Club, we can expect a big revival in the Bantam fancy. From what we can learn there will be something doing all along the line next fall and winter.

* * *

Harry E. Drevenstedt has purchased the entire string of Brown Red Game Bantams from John C. Blunck, including his winners at the past big shows. They will be shipped to Red Bank, N. J., and installed at the Columbian Poultry Farm, where they will be bred. This is purely a fancier's deal and one of the many now in progress, that will help the entries in Game Bantams at New York, Boston and other large shows.

* * *

We call attention to the advertisement of Mr. Frank H. Hodges, of Red Bank, New Jersey. The writer of these notes and Mr. Richard Hutchings will take possession of Columbia Poultry Farm on or about April first, and conduct it on practical lines, making the production of eggs a specialty. This will require all the available room for the White Leghorns and Buff Plymouth Rocks so Mr. Hodges must remove all stock within thirty days, except his Bantams which he will continue to breed. We have inspected the stock for sale and have no hesitation in saying that many desirable bargains are included in the list. The birds are in fine condition. It is a rare chance to secure fine standard bred stock.

* * *

Mr. Charles M. Diffenderffer, of Baltimore, Md., made a shipment last week of some extra fine exhibition Partridge Cochin Bantams to one of the most prominent breeders in England. Mr. Diffenderffer's Cochin Bantams and Pigmy Pouters are among the best in the United States.

We regret that many show reports have not appeared in The American Fancier as promptly as they should have. Circumstances over which we had no control conspired to prevent the appearance of these reports. We will endeavor to make up for lost time and publish as rapidly as possible each week the delayed copy, and trust our readers will bear with us in this hour of strenuousness and transfer of a publication from one city to another.

* * *

We learn that John Brett, who for many years has been in charge of game and pheasants on Fisher's Island, N. Y., will take up a new position of a similar nature at Westwood, N. J. Mr. Brett is one of the most practical and experienced poultry, game and dog fanciers in the United States. He learned the game in England and he learned it well.

* * *

There is some talk regarding the formation of a National Poultry Association and several enthusiastic promoters have already elected themselves to office. We will wait and watch developments, and, incidentally, keep an eye on the bunch that is pushing the matter.

* * *

Mr. George W. Weed, one of the best poultry breeders and judges in America has been engaged to travel for The American Fancier. He will visit the yards of all reputable breeders and state what he saw and what he thinks, and George has plenty of thinks in his dome. His writings will be clean, vigorous, honest and convincing. Watch for George's visit. It will do you good. Mr. Weed will be general manager for outside agents for subscriptions and advertising.

* * *

Harry F. Sherwood, owner of the Compo Poultry Farm, Saugatuck, Conn., was the first visitor to the new home of the American Fancier, in the Havemeyer Building, on Monday. Mr. Sherwood is a well known breeder of Barred Rocks and Pekin Ducks, and is of that persuasion of manhood of whom we say, not that his shadow may never grow less, but may the sunshine that he radiates never diminish.

* * *

J. Albert Lewis, of the Llewellyn Park Poultry Yards, of West Orange, N. J., has been secured as photographer to The American Fancier. Mr. Lewis is not only an artist in his line, but he is a fancier of long standing, so he throws the spirit of love, as it were, in his work, which will assure to the public and the fancier perfect pose, in fact, an ideal portrait of his subject, all of which may be observed in our future issues.

* * *

By-the-way, the article on Sebright Bantams will run through three or four numbers, but they will be well worth waiting for, as the author is well posted whereof he writes, and reproductions of the original cuts will appear with each installment of the article.

* * *

The production of this number of The American Fancier is a good deal parallel to Mark Twain's description of a ship clearing for sea. Disorder and confusion have abounded, but the boys of the printery have loaned a

willing hand, and our readers will readily recognize what mountains have been overcome when it is stated that the first piece of manuscript was handed out on Thursday evening and the last copy of this issue was scheduled to be put through the press on Friday evening. This is pretty good when it is considered that everything excepting types and paper had to be shipped from Washington on Tuesday, and a rush made to get the paper in shape. As it stands, three pages of advertisements had to be left out of this issue.

* * *

There are no rewards offered to the reader who finds the largest number of errors in this issue of The American Fancier, a la the Illustrated Standard. We confess to a whole batch of errors, typographical and otherwise, but this was practically unavoidable, as the paper was put to press after many difficulties.

* * *

When we are fairly settled in our home in the Havemeyer Building, the library of The American Fancier will be open to all interested. If you want to get data about standardbred stock, just come in and you will be granted all courtesies. The American Fancier has taken steps to make its bureau of information the best in the United States.

* * *

With its issue of March 31, 1906, The American Fancier will begin the publication of a specialty number. That is, a number devoted to certain varieties of standardbred stock. The articles will be profusely illustrated, and writers thoroughly acquainted with their subjects will contribute.

* * *

The American Fancier will offer handsome cups for the best bird in the show in the most prominent exhibitions throughout the country. The cup will be awarded in each instance upon the decision of three judges, so that there can be no cry of one-man-power.

* * *

There is one feature that has not been dilated upon in this issue, but something special will be inscribed later. By this we refer to the printery of The American Fancier, which is fully equipped to execute any line of printing. Our specialty, of course, is printing for standard stock fanciers.

* * *

When we speak of printing, we want to show you four catalogues that have already been issued by The American Fancier are editions de luxe, if you please, and we ask no odds of the crack-a-jacks in the line of half-tone work.

* * *

There is another wrinkle that is open to all our subscribers. When you want a catalogue, let us frame it up for you. We have a fellow who is an adept in the art of scribbling off catalogue material, without turning a hair. Just submit your ideas and they will be licked out in shape. There is an art in getting up attractive copy, and our man has got the game down to perfection. Good copy, correctly put up, makes a great saving in printing bills.

THE NEWARK POULTRY SHOW.

The tenth annual exhibition of the Fanciers' Poultry Association was held in Bamberger's Auditorium, Newark, N. J., January 29 to February 3, and was a most successful event.

The list of awards were as follows:

A. O. C. GUINEA FOWL.—Cock 1 A. A. Stoutenburgh.

SELLING CLASS.—Cock 1 Hetfield; ckl 1, 2 F. W. Young.

GOLDEN SEBRIGHT BANTAMS.—Cock 1 Glenbrook P. Farm, 2 H. Thomas; hen 1, 2 Thomas, 3, 4, 5 Glenbrook P. Farm; ckl 1, pullet 1, 2 Thomas; pen 1 Glenbrook P. Farm.

SILVER SEBRIGHT BANTAMS.—Cock 1 Glenbrook P. Farm, 2 L. Fisher; hen 1, 2, 3 Glenbrook Poultry Farm.

S. C. BLACK BANTAMS.—Hen 1, ckl 1, pullet 1 W. Kennedy.

BUFF COCHIN BANTAMS.—Ckl 1 A. Reinhardt, 2 Isaac Wilks; pullet 1 West, 2 Wilks.

WHITE COCHIN BANTAMS.—Cock 1 Brown Bros.; hen 1 A. Reinhardt, 2 C. & F. Peters.

BLACK COCHIN BANTAMS.—Cock 1 C. & F. Peters, 2 A. Reinhardt, 3, 4 Glenbrook P. Farm; hen 1 Reinhardt, 2, 3, 4 Glenbrook P. Farm; ckl 1 Reinhardt, 2, 3 Dr. H. W. Lincoln; pullet 1, 2 Reinhardt; pen 1 Reinhardt.

LIGHT BRAHMA BANTAMS.—Cock 1, 2 W. S. Orr, 3 G. W. Hillson; hen 1 Hillson, 2, 3 Orr; ckl 1, 2, pullet 1, 2 Orr; pen 1 Orr.

A. O. VARIETY BANTAMS.—Ckl 1 John Flynn, Jr.

B. B. R. G. BANTAMS.—Cock 1, 2 F. H. Hodges, 3 George Mahr; hen 1, 4, 5 Short Hills P. Farm, 2, 3 Hodges; ckl 1, 3 Short Hills P. Farm, 2 George Mahr, 4 N. M. Shaw; pullet 1, 2 Short Hills P. Farm, 3 Hodges; pen 1 Short Hills P. Farm, 2 Hodges, 3 J. N. Sinnock.

GOLDEN DUCKWING BANTAMS.—Cock 1, hen 1 Short Hills P. Farm.

SILVER DUCKWINGS.—Cock 1, hen 1 Geo. Mahr.

R. P. GAME BANTAMS.—Hen 1, 2 Hodges, 3, 4 Short Hills Poultry Farm; cock 1 Mowl Bros., 2 Short Hills P. Farm, 3, 4 Hodges; ckl 1, 2 Short Hills P. Farm; pullet 1 Hodges, 2, 3 Short Hills P. Farm; pen 1 Sinnock, 2 Hodges.

BIRCHEN GAME BANTAMS.—All to Short Hills Poultry Farm.

PEKIN DUCKS.—Drake 1 Chas. Waring.

ROUEN DUCKS.—EMBDEN GEESE.—All to Bonniebrook Farm.

THE SCRANTON AWARDS.

Here is the list of awards, which was kindly furnished us by Superintendent George E. Stevenson, who proved to be the right man in the proper place:

LIGHT BRAHMAS.—Cock 1 E. F. Tiffany, 2 Chas. O. Miers, 3 Fred W. Hughson; hen 1 Tiffany, 2 Miers, 3 Hughson; ckl 1 Tiffany, 2 Edw. Finn; pullet 1 Tiffany, 2 and 3 Finn; pen 1, 2, 3 E. F. Tiffany.

BUFF COCHINS.—Ckl 1, pullet 1 and 3, pullet 2 Geo. J. Purton.

PARTRIDGE COCHINS.—Cock 1 Purton; hen 1 Purton, 2 Chas. Phillips, 3 Wm. C. Sticklo; pen 1 Phillips.

BARRED PLYMOUTH ROCKS.—Cock 1 Sherman Bros., 2 F. H. Castner, 3 Tiffany; hen 1 J. W. Schiebel, Jr.; 72 Castner, 3 James Clark, ckl 1 and 3 J. H. Hazeldene, 2 Schiebel, J., pullet 1 Castner, 2 Schiebel, 3 Cooper; pen 1 and 3 J. W. Brady, 2 Howard Tidd.

WHITE PLYMOUTH ROCKS.—Cock 1 Tiffany, 2 Springer Bros., 3 G. W. Swartz; ckl 1 Springer Bros., 2 Wolfe, 3 Tiffany; hen 1 Tiffany, 2 J. Potter Clark, 3 Swartz; pullet 1 and 3 Springer Bros., 2 Swartz; pen 1 Snyder, 2 J. Potter Clarke.

BUFF PLYMOUTH ROCKS.—Cock 1 Mrs. Bertha Kerlin, 2 Hughson; hen 1 and 2 Chas. Hurtt, 3 Hughson; ckl 1 Snyder, 2 James Calvert, 3 Mrs. M. M. Becker; pullet 1 Mrs. M. M. Becker, 2 Chas. E. Becker, 3 Calvert; pen 1 Hurtt.

SILVER WYANDOTTES.—Cock 1 Hughson, 2 R. F. Alden, 3 Eugene Taunler; hen 1 W. D. Kinsell, 2 W. S. Huslander, 3 Mrs. Denton Cole; ckl 1 Mrs. Cole, 2 Alden, 3 Taunler; pullet 1 H. F. Atherton, 2 and 3 W. D. Kinsell; pen 1 Atherton, 2 Mrs. Cole, 3 Alden.

GOLDEN WYANDOTTES.—Cock 1 Geo. E. Stevenson, 2 and 3 Hazel Poultry Yds.; hen 1 and 3 Hazel Poultry Yds., 2 Stevenson; ckl 1 Geo. F. Wilson.

WHITE WYANDOTTES.—Cock 1 Hazel Poultry Yds., 2 Daniel James, 3 Wm. A. Williams; hen 1 W. T. Foster, 2 and 3 Frederick Christ; ckl 1 Hazel Poultry Yds., 2 F. Christ, 3 H. J. Lloyd; pullet 1 F. Christ, 2 Daniel James, 3 John O'Malley; pen 1 Hazel Poultry Yds., 2 Sprandel.

BUFF WYANDOTTES.—Cock 1 R. G. Pensyl, 2 Hughson; hen 1 Harry Proctor, 2 Pensyl, 3 Wheeler; ckl 1 and 2 Ed. Griffith; pullet 1 Wheeler, 2 Pensyl, 3 Griffith; pen 1 C. D. Sinsabaugh.

SILVER PENCILED WYANDOTTE.—Cock 1 and 2 David Dunn; hen 1 and 2 Dunn, 3 J. J. Reif; ckl 1 John F. Eiden, 2 Dunn, 3 Reif; pullet 1 Dunn, 2 Hoffman & Yeger, 3 Reif.

PARTRIDGE WYANDOTTES.—Cock 1 and 3 W. H. Hagen, 2 L. L. Bright; hen 1 F. O. Megargee, 2 Bright, 3 Pensyl; ckl 1 Hagen, 2 Pensyl; pen 1 Megargee.

COLUMBIAN WYANDOTTES.—Hen 1 Megargee, 2 and 3 Bright; ckl 1 Megargee, 2 Bright, 3 Oliver E. Brey; pullet 1 and 2 Megargee, 3 Bright.

BLACK WYANDOTTES.—Cock 1 and 2 E. Emery.

BLACK LANGSHANS.—Cock 1 and 2 Snaith & Von Bergen, 3 Hughson; hen 1 and 3 Snaith & Von Bergen, 2 Hughson; ckl 1 Snaith & Von Bergen, 2 W. W. Wilbur, 3 J. J. Berghauer; pullet 1 Wilbur, 2 and 3 Snaith & Von Bergen; pen 1 Snaith & Von Bergen.

WHITE LANGSHANS.—Cock 1 Hughson, 2 William Snaith, Jr.; hen 1 Hughson; pullet 1, 2 and 3 William Snaith, Jr.

S. C. BUFF ORPINGTONS.—Cock 1 C. E. Vass, 2 and 3 Bennington; hen 1 Vass, 2 and 3 Bennington; ckl 1 Richard Cunningham, 2 Weddigen, 3 Bennington; pullet 1 and 3 Weddigen, 2 Bennington; pen 1 Richard Snee, 2 and 3 Bennington.

S. C. BLACK ORPINGTONS.—Cock 1 Vass, 2 Geo. Heere, 3 Hughson; hen 1 Vass, 2 E. P. Conklin, 3 Hughson; ckl 1 Conklin, 2 Vass, pullet 1 and 2 Conklin, 3 Vass.

S. C. WHITE ORPINGTONS.—Cock 1, hen 1, ckl 1, pullet 1, 2, 3 Vass; ckl 2 and 3 Thos. Brown.

R. C. BUFF ORPINGTONS.—Cock 1 Vass; hen 1 Vass; ckl 1 Weddigen; ckl 2, pullet 1 Vass.

S. C. JUBILEE ORPINGTONS.—All to F. O. Megargee.

S. C. WHITE LEGHORNS.—Cock 1 A. W. Frazier, 2 W. R. Schmoll, 3 W. Huslander; hen 1 Marcus Cook, 2 Huslander, 3 Schmoll; ckl 1 Schmoll, 2 Frazier, 3 Finn; pullet 1 Schmoll, 2 F. Christ, 3 Frazier; pen 1 F. Christ, 2 A. R. Seamans, 3 A. W. Handy.

S. C. BROWN LEGHORNS.—Cock 1 Hughson, 2 Miers; hen 1 Hughson, 2 Miers; 3 S. H. Adams; ckl 1 Adams, 2 and 3 Miers; pullet 1 and 3 Miers, 2 Hughson; pen 1 Dr. M. D. Snyder.

S. C. BUFF LEGHORNS.—Cock 1 John Derr, 2 Hughson, 3 Hurtt; hen 1 Hurtt, 2 and 3 Hughson; ckl 1 Cook, 2 B. Allord; pullet 1 Cook.

S. C. BLACK LEGHORNS.—Cock 1 Allis Bros.

S. C. A. O. C. LEGHORNS.—All to Allis Bros.

R. C. WHITE LEGHORNS.—Cock 1 Tiffany, 2 Huslander, 3 Hughson; hen 1 Huslander, 2 Hughson, 3 Tiffany; ckl 1 Huslander, 2 Tiffany, 3 R. Taft; pullet 1 and 3 Taft, 2 Tiffany.

R. C. BROWN LEGHORNS.—Cock 1 B. Oakley, 2 B. Osterhout; hen 1 Hughson, 2 Frazier, 3 Clara S. Bissell; ckl 1 R. Williams, 2 Frazier, 3 Bissell; pullet 1 and 2 Oakley, 3 Frazier; pen 1 Joseph McCabe.

BLACK MINORCAS.—Cock 1 Hazle Poultry Yds., 2 and 3 Brockway; hen 1

Brockway, 2 and 3 Hazle Poultry Yds., ckl 1 Brockway, 2 Harry Rehn, 3 Hazle Poultry Yds.; pullet 1 Brockway, 2 and 3 Hazle Poultry Yds.

WHITE MINORCAS.—Cock 1, hen 1 Hughson; hen 2, ckl 1, pullet 1 J. V. Boss.

R. C. BLACK MINORCAS.—Cock 1, hen 1 Hughson.

R. C. WHITE MINORCAS.—Cock 1, hen 1 Hughson.

GOLDEN POLISH, PLAIN.—Pullet 2 J. J. Smith & Son.

WHITE CRESTED BLACK POLISH.—Hen 1, ckl 1 Robt. Schwenk.

WHITE CRESTED WHITE POLISH.—Cock 1 G. W. Strupler, 2 Hughson; hen 1 Hughson, 2 and 3 Strupler.

GOLDEN POLISH BEARDED.—Cock 1, hen 1 C. Rippon, 2 J. J. Smith.

S. S. HAMBURGS.—Cock 1 W. J. Mayo, 2 Hughson; hen 1 Tiffany, 2 Hughson; ckl 1 Tiffany; pullet 1 Tiffany, 2 Mayo; pen 1 H. F. Atherton.

BLACK HAMBURGS.—All to H. E. Lapp.

RHODE ISLAND REDS.—Hen 1, 2, 3 H. Schiebel, Jr.; ckl 1 Schiebel, Jr., 2 O. B. Fry, 3 Henry L. Fox; pullet 1 and 3 Schiebel, Jr., 2 Aaron Powell; pen 1 Aaron Powell.

R. C. R. I. REDS.—Cock 1 Schiebel, Jr., 2 Carlisle B. Huff, 3 Clara Bissell; hen 1 Hughson; ckl 1 Heumann, 2 Fox, 3 Geo. Breck; pullet 1 Fox, 2 Heumann, 3 Breck; pen 1 Adams, 2 Snyder.

HOUDANS.—Cock 1 Jacob Grill, 2 Tiffany, 3 Geo. Stevenson; hen 1 and 2 Stevenson, 3 Grill; ckl 1 Tiffany, 2 Atherton, 3 Stevenson; pullet 1 Tiffany, 2 Atherton, 3 Stevenson; pen 1 Stevenson.

SILKIES.—Cock 1, hen 1 William Smith, Jr.

BLACK RED PIT GAMES.—Cock 1 Pendered & Bloomer, 2 Jas. Barton, 3 E. B. Avery; ckl 1 and 2, pullet 1 and 2 Barton.

A. O. C. PIT GAME.—Cock 1 Jas. Oakford, 2 Fox, 3 Pendered & Bloomer; hen 1 and 3 Oakford, 2 Fox; ckl 1 Pendered & Bloomer, 2 and 3 Oakford; pullet 1 Fox, 2 and 3 Oakford; pen 1 and 2 Oakford.

INDIAN GAMES.—Hen 1 James Calvert.

WHITE INDIAN GAMES.—Cock 1, hen 1 Hughson.

B. B. R. STANDARD GAMES.—Cock 1 J. Clark, 2 D. Dunn; hen 1 and 2 Dunn, 3 Clark; pullet 1 Clark, 2 Dr. Winbrake, 3 Dunn; ckl 1 Dunn, 2 Winbrake, 3 Clark.

B. STANDARD RED GAMES.—Cock 1 Clark, 2 F. G. Boufuct; hen 1 Clark, 2 Dunn, ckl 1 and 2 Dunn, 3 Clark; pullet 1 Clark, 2 Dunn.

SILVER DUCKWING STANDARD GAMES.—All to Clark.

GOLDEN DUCKWINGS.—Cock 1, pullet 1 John Borthwick.

RED PYLE STANDARD GAMES.—Cock 1 Bouquet; pullet 1 Clark.

A. O. V.—Cock 1 and 2 Mrs. M. D. Snyder; hen 1 Mrs. Snyder, 1 Stevenson; ckl 1 Stevenson; pullet 1 Stevenson.

GUINEA FOWL.—1 Tiffany, 2 and 3 Stevenson.

B. B. R. GAME BANTAMS.—Cock 1 and 2 E. C. Richer, 3 C. Smith; hen 1 Richer, 2 Dunn; ckl 1 Richer, 2 and 3 Smith; pullet 1 Brown, 2 and 3 Richer; pen 1 Geo. Richline.

BROWN RED GAME BANTAMS.—Cock 1, hen 1 and 2 Pendered & Bloomer.

R. PYLE GAME BANTAMS.—Cock 1 J. J. Smith & Son; hen 1 Richer, 2 Tiffany; ckl 1 Richer, 2 C. Smith, 3 David Dunn; pullet 1 Smith, 2 Dunn, 3 J. J. Smith & Son.

SILVER DUCKWING G. BANTAMS.—Cock 1 Dunn; hen 1, ckl 1, pullet 1 E. C. Richer.

BUFF COCHIN BANTAMS.—Cock 1 J. J. Smith & Son, 2 Chas. Rippon; hen 1 J. J. Smith & Son, 2 Tiffany, 3 H. Von Bergen; ckl 1 and 3 Hoffman & Berger, 2 H. Von Bergen; pullet 1 Hoffman & Berger, 2 J. J. Smith & Son, 3 H. Von Bergen.

WHITE COCHIN BANTAMS.—Cock 1, hen 1, ckl 1, pullet 3 J. J. Smith & Son, cock 2, hen 2, ckl 2, pullet 2 Tiffany, pullet 1 Thos. Brown.

BLACK COCHIN BANTAMS.—Cock 1 J. J. Smith & Son, 2 Chas. Rippon, 3 Tiffany; hen 1 Smith & Son, 2 Alonzo Coburn, ckl 1 Smith & son, 3 Thos. Rowe; pullet 1 Smith & Son, 2 Tiffany, 3 Rowe.

PARTRIDGE COCHIN BANTAMS.—Hen 1 Rippon; ckl 1, pullet 1 Tiffany.

GOLDEN SEBRIGHT BANTAMS.—Cock 1 W. W. Kohler; hen 1 Stevenson, 2 Miers; ckl 1, pullet 1 Miers.

BROWN'S BUDGET

The pullets are singing their song of spring.

* * *

Time to get a new wick for your incubator.

* * *

Take good care of the male bird at the head of the pen. Sometimes they are so gallant they don't get enough feed. Feel their crop at night to see if they are well suppered. If not, teach them to eat by lantern light. It's a little trouble, but it is a paying investment.

* * *

Make arrangements the coming season to plant some rape seed if you are not well provided with good, well established grass runs. It is a quick grower and fowls and chicks are exceedingly fond of it. It can be cut off and it will grow up again. In very rich ground that is clean of weed the seed can be broadcasted. On moderately rich soils it is best to plant in drills and cultivate same as corn.

* * *

If you anticipate setting out any trees this Spring for shade in your poultry yards, use fruit trees of some kind. If you want a very rapid growing tree, and one that grows with a broad area or expanse, plant wild goose plum. The plums are fine either for eating or preserving, and when in the chicken yards yield well.

* * *

Sometimes there are small runs or yards entirely covered with wire netting. It's nice to plant grape vines of a good variety on the outside and train them so they will run up and over the top of the runs. The grape will provide shade and fine crops of fruit.

* * *

Sun-flowers are good to plant where young broods of chicks are to run. They can be planted early and the chicks will not bother them. After awhile they will give just the pleasant shade, not dense, so desirable for young chicks. Later on the crops will mature and be good as a help to balance winter rations.

* * *

It is said the A. P. A. has been invited to hold its next annual meeting at Auburn, N. Y. If it does there will be poultry institutes held there during the same time. New York takes great interest in poultry and the poultry institute meetings are a prominent feature there. The next meeting should be in the East and Auburn seems like a pretty good place to hold it.

* * *

Incubators on the farm are getting to be quite common. It shows how the poultry industry is growing and how the farmers are learning that it is necessary to use "New Fangled Things" to keep up with the progress procession. Why shouldn't the farm use all the improved methods of poultry culture!

"Please advise in The American Fancier about buckwheat, is it good for poultry? Subscriber, Newark, N. J."—Yes, it is an excellent food for fowls, either to alternate or feed with wheat or corn. It has heating qualities same as corn. Where it is the habit to occasionally boil oats and wheat together for fowls it is a good plan to add buckwheat. Use equal quantities of each grain.

* * *

Brush up your ideas about the cares of young chicks. Be ready before the chicks come. Remember the troubles of last season. Mistakes that are made twice should be called negligent blunders.

* * *

Something causes every trouble that the poultryman experiences with his fowls. The best remedy is to avoid the cause. If there was more careful investigation to learn the source of ailments, there would be less call for remedies.

* * *

There is too much poultry kept in cold storage while they are alive. Farmer Slowgo believes in "lettin' of 'em roost in their trees—it hardens 'em." He should be made to sit on a cake of ice and suck an icicle for his breakfast and see how he would like the hardening process.

* * *

The Poultry Show at Belair, Md., was a fine success. Mr. M. E. Ridgely showed some excellent light Brahmas, and some good Buff Plymouth Rocks, P. H. McCormie some very nice Black Longshaus; Alex. M. Falford a good string of Black Minorcas. A farmers' institute was held the same days of the poultry show. The writer gave a poultry talk at the farmers' institute, illustrating it with "living and moving pictures"—fowls from the show room.

Twelve years ago the question came up about maintaining a weekly journal devoted to standard bred stock. The Farm-Poultry, of August 1, 1895, a monthly journal admitted that The American Fancier was the only paper that could be successfully conducted as a weekly, and emphatically stated that this would not be possible if it were not for the ability and reputation of its editor, J. H. Drevenstedt. The Farm-Poultry further said that so long as Mr. Drevenstedt so ably filled the bill that it would be useless for any other publisher to try the plan, adding that it is quality that counts in making a standard bred journal a success. The fact that The American Fancier is alive to-day attests the worth of Mr. Drevenstedt, and more strength has been given him through the new deal that has been consummated, a deal which means a square deal to one and all, for the American Fancier plays no favorites.

RHODE ISLAND RED CLUB.

The Annual Meeting Held on January 17th.

The annual meeting of the Rhode Island Red Club of America was called to order at 3 P. M., January 17th, in the Music Hall, at Cincinnati, with the Hon. C. M. Bryant in the Chair.

In the absence of the Secretary, Dr. G. D. Wilcoxon was elected Secretary pro tem. Secretary's report read and accepted. It was moved by Dr. Wilcoxon that there be spread upon the Club's minutes a resolution noting the organization of the National Single Comb Rhode Island Red Club and expressing the gratification of this Club thereat. Seconded by Dr. Aldrich. Motion carried.

Treasurer's report read and accepted. Philip Caswell calls the attention of the members to the extreme importance of all American Poultry Associations' members being present at that Association's meeting. Mr. Miles moves the composition of a resolution by the Secretary urging the admission of the Rose Comb Rhode Island Reds to the Standard of Excellence and protesting against the admission of the American Reds. It was so ordered. Mr. J. M. Clonston, of West Virginia, requested information of the Club's work during the past year. A brief synopsis of the work was given by President Bryant. At the request of the Western members, a discussion of color took place. Question discussed by Drs. Aldrich and Benton, C. C. Murray and C. N. Hansen.

Nomination for the Club's officers for the ensuing year being next in order, it was moved, seconded and carried that all nominations be made by acclamation and the following officers were elected:

President—Philip Caswell, Newport, R. I.; First Vice-President—Hon. C. M. Bryant, Wollaston, Mass.; Second Vice-President—Oscar E. Miles, Columbus, Ohio; Third Vice-President—C. F. Ward, Winter Park, Fla.; Secretary-Treasurer—E. L. Prickett, Hazardville, Conn.

Executive Committee—Philip Caswell, R. I.; Hon. C. M. Bryant, Wollaston, Mass.; E. L. Prickett, Hazardville, Conn.; Dr. N. B. Aldrich, Fall River, Mass.; S. J. Tetley, Farmington, Mo.; Lester Tompkins, Concord, Mass.; Vernon L. Stafford, Fall River, Mass.

It was moved, seconded and carried, that the appointment of Honorary State Vice-President be referred to the Executive Committee.

The meeting was marked for its utter lack of any feeling, except enthusiasm for the breed and desire for its success. The members present representing widely different sections, expressed their determination to bring out classes as large in quantity and as fine in quality as the class at the Cincinnati Show.

The members were: Wm. Tobin, Indianapolis, Ind.; Wm. Hoswell, Huntington, W. Va.; Philip Caswell, Newport, R. I.; B. H. Scranton, Rising Sun, Ind.; C. C. Murray, Clowersport, Ky.; Dr. Geo. Benton, Elkart, Ind.; Lester Tompkins, Concord, Mass.; S. J. Tetley, Farmington, Mo.; R. C. Tuttle, Warsaw, Ky.; J. M. Clonston, Huntington, W. Va.; D. P. Shove, Fall River, Mass.; J. H. Valliere, Cedar Rapids, Iowa; Hon. C. M. Bryant, Wollaston, Mass.; Oscar E. Miles,

Columbus, Ohio; Dr. N. B. Aldrich, Fall River, Mass.; Dr. G. D. Wilcoxon, Freeport, Ill.; Dr. C. E. Hostetter, Point Pleasant, Ohio; E. A. Howe, Brightwood, Mass.; J. O. Stratton, Hartford, Conn.

Respectfully submitted,
G. D. WILCOXON,
Secretary pro tem.

Soil on Which to Rear Poultry.

Fowls dread most of all cold and damp. The soil on which to breed ought, therefore, to be dry, exposed to the sun, and permeable. If its permeability is not absolute, it is necessary to have recourse to drainage. When the ground is too earthy it is necessary to add a little gravel, of which fowls are very fond. As to shade, if there are not any large trees close by, it can be produced by planting some large potatoes, of which the thick foliage provides at the same time shade, coolness, and insects. One can also plant some shrubs or young trees of a certain size, which at the end of two seasons will embellish the enclosures, and render them more agreeable to the poultry. Some plantations of cabbage, sorrel, and endive which were preserved while young from the beaks of the fowls by means of wirework, constitute the best green food which can be given to poultry. No rule is fixed for planting trees for giving shade, but the more shade there is, intermingled with light sunlit clearings, the better the birds are pleased. It is necessary to prevent any poisonous plants from growing. These plantations of small shrubs and perennial plants have a double utility. In addition to the shade and coolness which they provide, their flowers and their foliage attract insects which provide a feast for the fowls. The vegetables draw a quantity of slugs, which the birds catch without any trouble. A hedge of yoke elms has the peculiarity of attracting cockafers, which, benumbed every morning, allow themselves to be gobbled like pills. The aromatic plants, such as fennel, are constantly covered with flies of all colors. It is thus that, by cultivating certain vegetation, one provides the fowls with enchanted parks. But, you will tell me, "Fowls like to ravage!" They will ravage nothing if the parks are sufficiently extensive, and it is necessary that the park should be spacious if anything at all.

Subscribers and advertisers should bear in mind that with this issue of The American Fancier there comes a new deal. All moneys due to the Howard Publishing Company should be forwarded to Washington, D. C., as The American Fancier Printing and Publishing Company assumes nothing in this line previous to the date of this issue of The American Fancier, Saturday, March 3, 1906.

There will be some mistakes and misunderstandings through this, but The American Fancier asks its patrons to notify us at once of such oversights. By doing so, trouble may be mutually avoided.

The number of new poultry associations springing up throughout the country shows that the poultry industry is rapidly increasing.

A Weekly Journal Devoted to Standardbred Stock.

SUBSCRIPTIONS.

Subscription, \$1.00 per year.
Foreign subscription, \$1.50 per year.
All subscriptions payable in advance.

NOTICE TO SUBSCRIBERS.

Subscribers will be notified when their subscription expires. If a subscriber wishes his subscription to the paper to be continued he must so notify this office and send the amount in payment for the same, otherwise the subscription will be discontinued.

THE AMERICAN FANCIER PRINTING AND PUBLISHING COMPANY.

Havemeyer Building, 26 Cortlandt Street.

New York City.

SALUTATORY.

The business announcement following these brief remarks indicate what is in store for the genuine fanciers and dyed-in-the-wool chicken cranks. I have been called to perform a duty, viz.: To assume absolute editorial control of The American Fancier beginning with this issue. Although deep in the poultry business, in a practical way, there will be sufficient time left to look after the destiny of the paper that I started in 1893, and which, notwithstanding all the shaking of heads by doubting Thomases, has survived the ordeal. It was thought impossible to make a success of a weekly poultry paper as there were so many fine and beautifully printed monthlies, which could be sold at a cheaper subscription price. It was hard sledding at times, but The American Fancier is still on earth. The demand for a live weekly poultry paper published in the metropolis of the world—New York—was so great that steps were taken early in January to bring about such an undertaking. The response from the best fanciers when the call was issued was so prompt, enthusiastic and convincing, that the incorporators felt highly encouraged, and, to tell the truth, I felt mighty good myself to think that the time was at hand and the good will of the boys so hearty, for the work of giving American fanciers a paper that will represent their interests as they have never been represented before. In assuming editorial control, I wish to state or rather reiterate what I said when the paper was started some years ago. It was to be the organ of the real fanciers and poultry breeders, not a commercial vehicle for the purpose of bringing lucre to the coffers, at the expense of the subscriber and small advertiser. It was to publish the show reports in full and give credit to every man or woman that won a prize at a show, regardless whether he or she were advertisers or not.

ADVERTISING.

The advertising rate in The American Fancier is fifty cents per inch for each insertion. Five per cent. discount for payment in advance for six months insertions, and ten per cent. for payment in advance for one year's insertion.

CLASSIFIED AD RATES.

Forty-two words or less one time fifty cents; three times, \$1.00; thirteen times, \$4.00; twenty-six times, \$6.00; fifty-two times, \$12.00. Additional words at the rate of two cents each for one insertion, or one cent each for each insertion when run thirteen times. PAYABLE IN ADVANCE.

It was to bar out dishonest advertisers regardless of their prominence.

It was to call attention to crooked dealings in the show-room and we believe The American Fancier was the only poultry paper ever sued for \$5,000 on a libel suit. But two trials in the Supreme Court demonstrated the fact that the Eagle screamed successfully and there is a new one on the title page this week. The business editor of The American Fancier, Mr. Robert T. Dennis, is a born newspaper man, started from the case up and has been connected with the metropolitan dailies and monthlies for years. He will have sole charge of the make-up of the new American Fancier, and will be at the New York office every day to look after business and meet the visiting fanciers. I will be in New York on Monday and Wednesday each week, the rest of the time at Red Bank, N. J. The latch-string is out at either place to every reader, subscriber and advertiser of The American Fancier. The glad hand will be ever ready.

As to The American Fancier, I will say that it will be conducted on pretty strong American ideas beginning with Davy Crockett's famous lines, "Be sure you are right, then go ahead," followed up by the immortal saying of Thomas Jefferson, "Equal rights for all, with special privileges to none." And The American Fancier will appear every week in the year on time.

THE AMERICAN FANCIER PRINTING AND PUBLISHING CO.

There seems to be a semi-patriotic strain connected with the career of The American Fancier, all of which has been evinced in the light of recent events.

The American Fancier was born on July 4, 1893, by John H. Drevensedt, so universally known by his Faber signature of J. H. Drevensedt, and better known to his legion of friends and acquaintances among the true fanciers as plain, every day "Drev," a man who appears to be deigned to romp continuously in the Garden of Youth, despite his years that go to make up the age of forethought and wisdom. So, the editor of The American Fancier is likely to come into his heritage, for the rejuvenation of the paper will largely depend upon his individual efforts, coupled with the assistance of a bunch of fanciers of the true spirit, amply backed by the capital so necessary in any undertaking of to-day.

The introduction is somewhat of a digression from the original line of thought, but it is intended to convey the idea that The American Fancier is American to the core. Therefore, it is merely necessary to state that the Board of Directors of the American Fancier Printing and Publishing Company was duly organized at a meeting held in the Herald Square Hotel, in New York City, on Lincoln's Birthday, and the Howard Publishing Company, of Washington, D. C., formally transferred the publication to the American Fancier Printing and Publishing Company, on Washington's Birthday.

The officers of the American Fancier Printing and Publishing Company are: President, Richard L. Hutchings, of Rutherford, N. J.; Vice-President, John H. Drevensedt, of Red Bank, N. J.; Treasurer, Harry M. Carpenter, of Ossining, N. Y.; Secretary, Robert T. Dennis, of Ossining, N. Y.

It was mutually understood in the transfer of The American Fancier by the Howard Publishing Company to the American Fancier Printing and Publishing Company that the stock of the new corporation was to be placed at a popular price, so that the backyard poultry fancier will have his innings with the fancier of means, thus affording each and every one an opportunity of being interested in the publication of what is intended to be the premier publication of its class in the United States, a journal solely devoted to standard bred stock.

To this end, the corporation was duly incorporated under the laws of the State of New York, the capitalization being \$10,000, divided into shares of ten dollars each. This has given all an opportunity to subscribe, and the stock has been liberally taken, so that the success of the project is assured as far as finances are concerned, it now being necessary to demonstrate that the paper will merit the confidence of those interested, and The American Fancier Printing and Publishing Company will reap the benefit and glory of producing a paper that will be without a competitor in its class in the country.

The fact that small ownings are to maintain makes it apparent that The American Fancier will have a large backing of fanciers who are individually interested in its welfare, thus augmenting its influence through a medium that cannot be secured in any other manner.

The number of excellent brooders on the market supply the demand for less death-traps and more chicken raisers.

SPECIAL ANNOUNCEMENT.

The home of The American Fancier Printing and Publishing Company is in the Havemeyer Building, No. 26 Cortlandt street, New York City. Look up Room 321, and you will find us.

This announcement is made in order to save trouble for our good friend, William V. Russ, of the Excelsior Wire and Poultry Supply Company, of Nos. 26-28 Vesey street, New York City, who allowed The American Fancier to receive its mail at his headquarters while the corporation was in the course of organization.

Therefore, our friends will kindly remember to address their correspondence to us at the above address or to drop in at Room 321, Havemeyer Building, No. 26 Cortlandt street, when they want to see us personally.

Office hours from 9 A. M. to 4 P. M.

The article on Sebright Bantams appearing in this number, was lifted bodily from a recent issue of the celebrated English publication, The Feathered World. The individual in charge of the office shears hereby gives notice that the instrument in question will be used upon the least provocation, especially when the matter to be appropriated is of sufficient merit to warrant such a course. In every instance due credit will be given to the source from which the article was secured, for we thoroughly believe in the policy of the New York Sun of using the other fellow's stuff if it is clever, but religiously giving credit to whom credit is due.

The "Backyard Fanciers' Column" will soon be a feature of The American Fancier. The chief contributor will be a true American boy, who will tell his story in his own way. Photographer Lewis is to take a snap shot of the boy, his coop and his chickens, and the boy will frame up his tale. There are lots of other boys that the boy is going to tell of, and perhaps he will deal out an article once in a while about some girls who rear standardbred stock.

Try to vary making mash for your chickens. For instance, use salt and pepper at one time, onions at another. Water in which meat has been boiled is excellent, and is heartily enjoyed by the fowls. Powdered charcoal put in the mash absorbs poisonous gases in the intestines and is a fine medicine for indigestion.

We hope that some of our readers who have tried cloth windows during the past season will give us an article upon the outcome of their experiments. The best article will obtain The American Fancier free for one year to the writer.

Kill or market the egg-eating or feather-pulling hen at once. Such a hen teaches a bad fault to the rest of the flock.

The old notion that old hens will produce better and stronger chicks than a young hen has been exploded.

Culling is one of the most important requisites in successful poultry breeding.

We have a White Leghorn Fancier in this community who has about solved the winter egg question, from less than three hundred hens a daily output of ten dozen eggs has been reached. This ought to be a consoling item to those whose flocks have not laid ten dozen during the winter.

GEORGE E. HOWELL,
Howell, N. Y.

Advantages of the Trap Nest.

Among the foremost aids which contribute greatly to further the desired ends of the modern poultryman must be counted the trap nest. Its worth to all classes of poultrymen can scarcely be overestimated. Its adoption is fully as significant an event to the poultry world as was the utilization of electricity to the scientific world. With its coming the dark ages of poultrydom are brought to a close and a new era is ushered in. The ancient way of keeping poultry in a haphazard manner is rapidly being supplanted by the accurate scientific method. The trap nest is advantageous to all classes of poultrymen—the fancier, the market poultryman and the farmer. It has passed the experimental stage and is rapidly being adopted by many poultrymen.

The trap nest is, to the market poultryman, an indispensable aid. The egg farmer should know the laying qualities of each individual hen. This can be accomplished only with the aid of the trap nest. It tells which hen lays the most eggs, it enables one to pick out the hen which lays the fewest and it points out the drone. The poultryman should base his poultry breeding on the old axiom that like produces like. It is only by breeding from birds in which the best qualities have been intensified that any progress can be made and perfection nearer approached. How, then, is the market poultryman to know the birds from which to breed if he is totally ignorant of the laying qualities of the individual birds? It is impossible to make much progress by breeding in this haphazard, time-honored fashion. The heavy laying hen should be used for breeding purposes and the drone sent to the block. When breeding fowls in this manner, the breeder should mate to his best hens a male bird which is a direct descendant of heavy laying fowls. By breeding from fowls of known laying value, a strain that would be valuable acquisition to any market poultryman may be established in a few years.

The fancier will profit much by the use of a practical trap nesting system. It will enable him to breed from the fowls whose eggs produce the greatest number of exhibition birds. He may also detect the hen which lays the infertile eggs and remove her from the breeding pen. By pedigreering his birds he may, in time, build up an excellent strain of standardbred birds.

One erroneous idea which is prevalent among poultrymen is that trap nests require a great amount of time which necessitates greatly increased labor. This is not the case. It is claimed by a good authority that one man can, during the busy season, care for two thousand to two thousand five hundred hens using trap nests. With good trap nests, situated in convenient portions of the poultry house, it is a very easy task for the average poultryman to care for them—release the

hen and note the number of her leg band.

Where the trap is used the hens are prevented from engaging in the aggravating habit of egg eating. The first hen which begins to eat eggs may be removed from the remainder of the flock and the other members of the flock thus prevented from beginning the habit.

Hens do not shun a good trap nest; on the contrary they take kindly to it. The trap nest being darkened gives the hen seclusion and prevents the other members of the flock from annoying her. The nests will also prevent many eggs from being broken by several hens crowding on the nest at the same time.

For the poultryman who hatches his eggs with sitting hens, the trap nest is a great aid. With each hen given a separate nest and the remainder of the flock kept from them, the chances for a favorable hatch are greatly increased. The sitting hens are prevented from leaving the nest which, in cold weather, would chill the eggs. It is much less trouble to care for sitting hens kept in this manner than in any other.

By using the trap nests the fowls will become accustomed to handling and will become less excitable. The breeder can readily note any birds which may not be in the best condition and can promptly remove them from the pen. By the frequent removing of the hens from the nest, broodiness in the heavy varieties of fowls may be discouraged.

When a poultryman is thinking of installing trap nests he should carefully investigate the various makes and mentally weigh their merits. The amount of time required to care for trap nests will amount to considerable in the aggregate, therefore it behooves the poultryman to select the most convenient trap nest on the market. The trap nest should be accurate; an unreliable trap nest is worse than one at all. The nest should not be complicated in construction or in operation. While the cost of the nest should be taken into consideration, the lowest price nest is not always the cheapest in the end. It is best to consider the more important points first. A nest with double compartments is the best. With such a nest it is impossible for the hen to break the egg. This is a great advantage and will prove satisfactory to any poultry raiser.

The writer has had practical experience with trap nests for several years and is convinced of their manifold advantages. To many poultryman the advantages are evident for there are many breeders who are enthusiastic in their praise of them. There is a superabundance of proof of the trap nest's worth. To many, no doubt, will come this thought: "What is the use of all this extra amount of work made necessary by the trap nest?" It this: The poultryman who would command top prices for his products and who would derive returns from his poultry must, of necessity, keep abreast of the times, for the moment he becomes lax in his work some more enterprising competitor will forge ahead of him to the front. The breeder who installs trap nests will have taken a most important step forward.

R. H. JONES,
Hillsboro, Illinois.

Defends the Score Card.

Editor of The American Fancier:

I have been a breeder and exhibitor of pure bred poultry in a small way for my own pleasure for fifteen years and a subscriber to the good old American Fancier nearly half that time. I have been much interested in the articles which appear from time to time by the advocates of score card and comparison judging. Now, Brother Drenstedt it seems to me you pick out the defect in score card judging and overlook some very similar ones in Comparison Judging. You say no two Judges can score the same bird alike. Can the Comparison Judges do any better? Look in the November 5, 1905 issue of The American Fancier in the report of the St. Louis Show. For instance, D. Lincoln Orr on White Wyandottes says: "2d cock could have change places with the 1st hen was in the writers opinion the best in the show. 3d cockrel was worthy of a higher place. 2d pullet would prefer to 1st." Edwin H. Morris says of Buff Opringtons: "A good display but badly handled by Judge, an unnoticed cockerel being far ahead of the lot, and in hens if 2d was 1st and 5th and 6th was 3d and an unnoticed one 4th, true merit would have got its due." And so on through the list. Now, if a beginner had taken your advice and paid a good price for some good stock and had raised a nice lot of youngsters and had sent that unnoticed cockerel there and then had read Mr. Morris's report, wouldn't he have wondered what defects it was the Judge saw, but if he had a card he would have compared the cut with the different sections of the bird and got the Judges' ideas.

D. D. HAINES.

This is the season of the year when secretaries of county fairs begin to look about for judges, and they should be careful in their selection. The friend of a politician don't go now-a-days. The fellow who is a true fancier is the fellow for judge.

The fellow who runs a standardbred stock paper for the ads he can get and forgets the true mission of his paper will sooner or later be sorry. The American Fancier is run for the benefit of its readers and advertisers, thus benefiting the paper.

John Jay Cohen, Jr., manager of the Cohen Crest Poultry Farm, of Augusta, Ga., is one of the oldest breeders of standardbred poultry stock in the South, making a specialty of White Plymouth Rocks and White Wyandottes.

Many people who send in their subscriptions give us their autograph signature. The plainer you write your name, the more sure you are of getting your paper.

Some fanciers say that pieces of old iron put in the drinking water is a good tonic for fowls.

A good canvasser can make big money with The American Fancier. Write us for terms.

South Dakota is rapidly coming to the front in poultry culture.

The poultry interest during the past season has been especially favored, good prices for eggs and table poultry has put money in the pockets of the hen keepers, and given them a sort of independent demeanor.

The natural effect has been a boom in fancy poultry keeping, a reflection of which is the extreme high prices being paid all over the country for choice specimens.

The standardbred has crowded out the old barn-yard hen, and where formerly she flourished you now see something more in keeping with the times.

In this quiet hamlet where dame fortune has dropped us, I often note the different flocks and their uniform appearance as against the monstrosities of the past.

They have learned the best market comes to the uniform quality, and such can only be had from a uniform flock.

But let me again say, the greater profit for good, extra good products comes from the private customer, be your own middle man and retailer, and make all three profits; keep looking higher, improve the quality of your products; improve your method of packing and preparing for market. Make the products more attractive in order to draw a customer with more money in his pocket to give up when convinced he is getting value received.

The storage people have been good friends to the egg producers, insofar as they have sustained prices during the flush of eggs, and removed a surplus from the market that would otherwise have been bound to cause a drop of many cents a dozen.

There is however, not a great enough margin between the price of fresh eggs and the stored ones.

Those who produce winter eggs should have customers for them independent of regular trade channels and should ask and receive twice as much as the seller of the eggs of days long gone by.

Later I shall tell you how I succeeded with the winter egg problem.

The camera seems to be playing an important part in the new style poultry journalism. Under its baneful influence the space writer of the good old days has ceased to exist, and where he formerly held sway we find a few pictures to amuse the children and rest the eyes of the elders.

Speaking of children recalls the following hot one handed out to us by the youngest member of the Howell family on a recent egg-gathering trip, to wit: "Why does a brown hen lay a white egg, and why does a white hen lay a brown egg?"

It is needless to add the answer has not been forthcoming as yet.

OTSELIC POULTRY YARDS

Established 1886

Over 1,500 birds to sell. Can furnish anything you want in Ornamental, Exhibition or Utility Stock in Poultry:

Waterfowl, both domestic and wild; Swan, Peafowl, Guinea fowl, Pigeons, Pheasants, Rabbits, Ferrets, Cavies or Guinea Pigs. I can fit you out with anything you want in this line. Any quality you want at right price.

Correspondence promptly and cheerfully answered. 07-tf

Curing the Birds

MR. HUGO FREESE, of Rochester, N. Y., who is himself a practical poultryman, has a sure roup cure which is at once effective and simple in its application. All that is necessary is

to put the directed amount of his preparation in the drinking water, and every time the birds take a drink they take their own medicine along with it, and a speedy cure follows. Mr. Freese also also manufactures an egg producer for making hens more prolific layers. Elsewhere in this paper he has an advertisement of these articles. Mr. Freese is quite well known as a fancier, his specialty being Rose Comb Rhode Island Reds. Parties desiring eggs from these choice fowls or further information concerning his remedies should address

MR. HUGO FREESE, Rochester, N. Y.

Keeps Poultry Healthy

VIGER'S
Crushed
Charcoal

Prevents Disease

Chemically pure, keeps poultry strong, healthy and in good laying condition. Corrects wrong feeding. Not a drug, but Nature's own purifier. Coarse or fine granulated, also pulverized for soft feed. 50-lb. trial bag \$1.00; special price for quantities. Samples free. Viger's Coal & Wood Co., 20th St., Detroit, Mich.

GINSENG

is a money making crop—room in your garden to grow hundreds of dollars worth annually. Thrives throughout the U. S. and Canada. We sell roots and seed during spring and fall planting seasons, and buy the dried product. You can get started in this profitable business for a small outlay. Send 2c stamp to-day for illustrated literature telling all about it. T F

The St. Louis Ginseng Co., St. Louis, Mo.

CHICAGO, ILL.

WHAT YOU RAISE,
not the chicks you can hatch, marks your success. It's altogether a matter of feeding. We've worked out the solution in a baby feed for baby chicks.

DARLING'S CHICK FEED
is adapted to new, weak stomachs. It avoids little chick "ailments." It makes rapid growth, better chicks, more of them. Every sack used returns its cost many times over. The following Darling Specials in 100 pound bags, f. o. b. Chicago or New York, cash with order.

Chick Feed.....\$2.50	Forcing Food.....\$2.00
Laying Food.....\$2.00	Oyster Shells......50
Scratching Food.\$2.00	Mica Crystal Grit... .65

It pays to feed for a purpose. Address our nearest office.

Young's Strain S. C. W. Leghorns**I HAVE NO OTHER BREEDS**

My strain again for the sixth consecutive year shows its super-
iority by winning more prizes at Madison Square Garden New
York, in the strongest competition ever known, than all others
combined, including 17 specials, and again winning the National
S. C. W. Leghorn silver cup. Two weeks later I almost duplicated
my wonderful win of last year at Boston by winning 9 prizes on
9 entries against the most prominent breeders of the east. My
winings for 1906 at the world's two greatest shows are as follows:

BOSTON

Pen—1st.
Pullets—4th.
Hens—st., 4th.
Cockrels—1st, 2nd.
Cocks—1st, 2nd.

NEW YORK

Pen—4th.
Pullets—1st, 2nd, 5th.
Hens—2nd.
Cockrels—1st, 4th.
Cocks—1st, 3rd, 4th.

SEBRIGHT BANTAMS

From The Feathered World—By R. Wiseman Cunningham, M. D.

II.

In gold Sebrights the difficulty of getting sharp, green-black lacing is greater than in silvers, as golden-bay and black are by no means so great a contrast as white and black. There is no such color as true black in na-

Challenge Cup Winner.

ture, black being in reality a mixture of various shades very closely allied to brown. Still, taking all this into consideration, gold Sebrights, with few exceptions, are not nearly so good as silvers in quality of lacing, and there is a wide field for gold Sebright breeders to produce a strain of really soundly-laced golds.

The gold cocks especially fail terribly in lacing, and I advise breeders to get golds even too heavy in lacing, if it is of the correct green-black color, before trying to breed for the very lacing which is so often brown-black or mossy. Mr. S. Bowler exhibited the best gold Sebright at the Crystal Palace, 1904, I have ever seen.

Shape of the Body Feathers.—In all past descriptions of the feathering of Sebrights, the feathers have been described as short and well rounded at the tips. Does such a strain as this exist, which possesses quality in any other respect? All I have seen are more or less uneven in lacing, if properly examined. Members of the Sebright Club are agreed that the feathers should be as wide and short as possible, but almond or wedge-shaped. This shows the contrast between the ground color and its black edging to most advantage, and the lacing up the sides of the feathers will bear much closer inspection than that in the round-feathered specimens. Narrow feathering, however, is much to be condemned, as it is usual for such Sebrights to be too long and sharp in the neck hackle, saddle hackle, and to possess sickle feathers in the tail, besides long backs and long legs.

In shape the feathers of the cock

and hen should be exactly the same, the cock being what is called hen-feathered. The first or upper two tail feathers may be a little longer than the remaining feathers, but this is an advantage rather than otherwise in the breeding pen. These slightly sickle-tailed cocks are invariably the best stock-getters. The wider the tail feathers are the better. Very often cocks with the best show tails—i. e., short and square—are absolutely no use in the breeding pen, but there are many exceptions to this rule.

Head Properties.—The head should be short from back to front, and of moderate width; small and perky-looking. The comb broad in front, tapering gradually backwards into a spike of moderate length and substance, which follows the shape of the back of the head, but ought not to lie on the skull like the comb of a Wyandotte. Helmet-shaped is the expres-

Finely Laced Breast.

sion used to describe this formation of comb. The surface of the comb is well serrated, and not spiky. Spiky combs take away from the cobby appearance of the Bantam. In cocks the combs are crimson-red in color; in hens, dark purple or mulberry. Hen Sebrights frequently have combs which are red in color, but preference must be given to the mulberry comb. The iris of the eye should be very dark brown, almost black or bull-eyed.

The face and ear-lobes are smooth and fine in texture, dark red in the cocks, with the exception of the cere, which ought to be a mulberry color,

and mulberry colored in the hens. White patches in the ear-lobes are considered a great blemish, although fifty or more years ago great efforts were made to get white ear-lobes on

White Cap and Bib, With Defective Shoulder Lacing.

Sebrights by introducing rosecomb blood. We have quite enough properties to breed for without the addition of white ear-lobes. The wattles are of medium size, fine, smooth, well rounded, red in the cocks, mulberry in the hens. Very large combs and wattles take away from the smart look of a Sebright, and are not to be encouraged. The beak is short, moderately stout, curved slightly downwards, and horn colored.

The neck should be short and thick, small at the junction with the head, rapidly thickening out towards the breast, which is broad and prominent. The back should be short and flat, broad across the shoulders, narrowing in a short and graceful curve towards the tail, the setting of which is also proportionately thick. Narrow-shouldered, long-backed Sebrights are far too common, and usually are long in neck and leg.

The wings are large in proportion to the size of the bird, held firmly to the sides, and are carried drooping towards the heels, as in rosecombs. The thighs and legs are short and fine in bone; the feet four-toed, of moderate size. The legs and feet are covered with fine, smooth, slaty-blue colored scales, and quite devoid of feathering. The toe-nails horn-colored.

In shape the Sebright is cobby all over, and in carriage quite distinct from any other breed of Bantam. The head is well carried back, the breast very prominent, showing the lacing on the feathers distinctly from the throat right down to the thighs. The tail is well carried over the back, almost

touching the back of the head, well spread out, showing every feather, resembling very much the carriage of a Fantail pigeon. He is a vain little bird, but as plucky as he is vain, and without a moment's hesitation will tackle the largest fowl that comes within sight.

In size there is a great difference of opinion. Personally, I believe in moderation in size, as very small birds are of no use for stock purposes. About one pound and a half is the outside limit for cocks, less, of course, for hens. Apparent size is the best guide in judging. A perfectly-shapen, short-legged bird will pass with much more weight than a long-legged, unshapely specimen.

In judging Sebrights, do not imagine that you can select the winners by walking up and down in front of the pens and poking at the birds with a judging-stick. Every one of the exhibits that looks at all well on the first glance through must be handled and faults looked for, beginning with the head, and ending with the tail feathers, where blemishes are most frequently passed over. Reporters who have to give their opinion on the exhibits frequently criticise adversely the awards given by the judge. They, in most cases, are not allowed to handle the birds, and cannot see why an apparently good bird to all outward appearances has not been placed in the money. In judging, it is also important to bear in mind the difference between the feathering in young Sebrights as compared with that of mature birds. Cockerels and pullets in their first year are more heavily and not so sharply laced as they are likely to be in their second year. The lacing usually gets finer with each successive moult. In aged birds the lacing loses its density and sheen, and looks quite faded.

(To be Continued)

The lazy hen occupies about the same position in the hennery that the lazy man does in the hennery. The only distinction is that the lazy man usually goes to the almshouse and the lazy hen should be mixed up in a pot pie.

The lack of vitality in eggs is often due to the breeding stock, the parents lacking vitality, or the conditions surrounding them being such as to impair the strength of the germs.

The successful fancier has many obstacles to contend with, but "stick to it-tiveness" will go a long ways to swing success.

A good S-say for the poultry yard: System, Sobriety, Satisfaction, Skill, Success, Snug, Seek, Seasonable, Study, Service, Sentiment, Sagacity, Sympathy, Superiority, Score, Sand, Strain, Scope, Sanitary.

Conveniences and handy devices are always a source of both satisfaction and economy. Little things are the factors in the cog wheel of success in all branches of poultry industry, the neglect of one may put out of gear the entire machinery.

An authority says he does not trust the religion of the Deacon who is a shrewd horse trader. Miller Purvis has declared he "would not thank the man to pray for him who lets his fowls roost out doors or in a cold house." A colored camp meeting in a neighborhood enables the hardware store to dispose of all pad-locks on hand, and all ancient firearms are re-loaded.

It's enough to disgust the hens as well as the poultrymen. The idea of eggs selling at 12 cents a dozen whole-sale in February. Prices of feed high, as usual. That's what cold storage and the open winter accomplished. Can't the poultrymen make a combine to corner these cold storage egg dealers?

Remember now if you are managing a brooder that you can cause losses by too much heat as well as too little. When a heat of 98 degrees is wanted for young chicks to brood in at night, it means that degree of heat is what is wanted after the heat of the bodies has increased the temperature all it will in the brooders. Consequently an allowance should be made as to how much heat is really necessary before the chicks go in. It might be 75 or 80 degrees. After chicks have been in for half an hour, see what the temperature is and then lower or raise flame of lamp to secure the desired temperature.

An old English authority says, "All hens that are inclined to set should be allowed to hatch and bring up one brood of chickens a year; for, if altogether restrained from sitting, a hen suffers much in moulting, and is restless and excited for the remainder of the season." If this is so the non-incubating breeds must have a time of it in moulting. Perhaps, just only perhaps, this is the reason for the fall starving of birds to induce rapid or early moulting.

Anyone can set a hen, some people say. Of course they mean if the hen is willing. Trying to make a hen sit on eggs when she does not conclude to be accomodating will make the best man a backslider. An Irishman tried to make a contrary hen set and declared, "She would only sit standing." Be patient and gentle with broody hens, make no quick motions around them. Let them take their own time to settle down on a new nest you may have removed them to. The surroundings are strange, she must realize she

is in no danger. If you have been banging her off the nest because she was broody, she hasn't got any settled opinion of your actions, and is justly suspicious.

Protect the early hatched chicks from the winds. March winds are too severe on young chicks. If they are put out with a hen, arrange to have the coop face the South. In front of the coop use boards eight inches wide, set up, so to lay a window sash on them. This will make a nice little sunny run out of the wind. Sunshine means health and happiness to the little chirpers.

There should be no such thing as wild domestic fowls. What makes fowls, any breed, so scary or wild is the way they have been cared for. Leghorns are a breed that are active, always lively, and ready to forage for food. Some people say they are nervous. Well, we have seen some flocks that were nervous—but the way they were handled (cared for), would have crazed wooden decoy ducks. We have seen women keeping Brown and White Leghorns that had them so tame they could pick up any bird at will.

Progress in poultry raising—well, I guess so, when you hear farmers discussing about incubators, and are as "glib" on the subject as they are about farm crops. Some farmers are "getting on" to poultry raising in a great way. At a recent farmers' club meeting in this State a woman declared that she had made more money from her small flock of fowls than from their dairy cows. Instead of pin money or grocery supplies the returns from the fowls becomes a handsome income of profit.

The writer would like to have the circulars of all incubator makers. Address, G. O. Brown, Parkville, Md.

I have just read reason No. 329 why chicks die in the shell. There seems to be so many reasons, there is no wonder they can't live. Then again there is a chance that these advanced theories are, after all, somewhat theories or different ideas of different people. "Doubtful things are mighty uncertain."

Perhaps the man who has been feeding his hens all winter, forcing egg production, and then along in March sets hens should expect trouble. Eggs from hens that have been thus forced contain many reasons for not hatching. When they do hatch, strong chicks should not be expected. You can not force nature too far. Strong chicks should not be expected from eggs laid in the spring by hens that have been forced to produce winter eggs also.

The question is often asked how much grain should be fed to a dozen hens each day, etc. It is difficult to determine the proper amount. Besides it is not best to feed each day just exactly the same allowance. Watch the flock and note whether you think they require more or less than a certain stipulated quantity. It is always preferable to feed more than one kind of grain at night feed. Some hens have a preference. Mix common sense with your feeding.

TUMBLERS.

Frillback in the Kennel, the Farm, the Poultry Yard.

The first named variety has gone down very considerably in favor among Irish fanciers of late years, and nowadays very few representatives of it are to be met with at any of our shows. One reason why this is, I think, should be attributed to the fact that, as a general rule, beards are usually classed along with balds. The classification of all, or nearly all, our shows reads "balds or beards," and nine out of every ten judges will give the bald the preference, so that fanciers have no chance with this pretty bird. It would certainly be better to relegate it to the many different varieties found in the "any other variety" class, where it would almost stand a better chance of distinguishing itself.

Beards are to be found both short and long-faced, but the few that are to be met with in our midst belong chiefly to that latter variety. I really don't think we have a good short-faced beard in Ireland, and even in England the fanciers of the short-faced beard are few and far between.

The beard is met with in all the colors of the bald, such as blacks, blues, reds, yellows, silvers, etc. The marking or "beard" from which the variety has been named is a small patch of white at the throat, just below the beak. This "patch" must be nice and evenly formed, and extend from eye to eye; that is, commencing under one eye and running underneath (under the beak it should be about half an inch wide) right around to the other eye. It must be exactly the same on both cheeks, and the edges cannot be too even; any raggedness spoils the whole appearance.

Some of the early fanciers advocated a line of colored feathers running down the centre of the beard, thus dividing it equally into two parts. This certainly would make the breeding of this variety very much harder, but it never found any favor, so that what is wanted is a nice white patch, without any colored feathers appearing in it whatever. The flights are the next. These should be just as in the bald, they should be ten each side, but this they seldom are. Eight a side is considered good, yet ten a side has been got before now, so that it is not an impossibility. Fanciers of this variety therefore should not be content without trying to reach the highest standard, viz., ten a side.

The tail ought also to be white, and not showing any colored feathers, but this point does not present much difficulty. The beard differs from the bald in the next point, viz., the marking on the legs. Whereas the latter should be quite clean thighed, the beard should be only white on the stockings, that is, the lower extremity of thighs should be white, and all the rest marked the same as the upper portion of its body.

The eye of the beard ought to be a nice clear pearl, and the beak and beak wattle fine. The color of the beak depends upon the color of the birds—in blacks and blues the upper mandible should be black or nearly so, and the lower one flesh colored; while in reds and yellows, and also in silvers, the whole beak is usually flesh colored.

The beard is a very hardy variety, and is a capital bird for the young

fancier to make a start with. They are very prolific, and good nurses, and make grand feeders for some of the more delicate varieties, as they are of gentle disposition. I need scarcely say anything with reference to their color, as my remarks on the bald will apply equally well here.

Another very handsome variety of the Tumbler family, and one that is cultivated to a considerable extent by a great number of fanciers, is that commonly called "Selfs." As the name implies, they are the one color throughout the entire body; they are also to be found both short-faced and long, but I will deal only just now with the latter, the principal points of which are color and shape.

The face, as it is generally called, must be neither too long nor too short, but a happy medium, which is termed pleasant faced. The color, no matter what shade it is, must be of a very deep hue, and run consistent all over the body. It is hard to get the tail and flights of the same rich color as the remainder of the body.

In breeding this point must be kept constantly in view, and no two birds both deficient in this point ought to be mated together. The principal colors in which this variety is met are blacks, reds and yellows. The blacks should present that nice metallic lustre all over the body, which gives this color a very handsome appearance; the other shades ought to be as deep as it is possible to get them.

Selfs are a variety that here in Ireland have made great headway during the last few years. The display they made at the late Rotunda show will be still green in the minds of such Tumbler fanciers as attended that show. Both numerically and from the point of view of quality the turn out made by them on that occasion was very creditable indeed.

The tumbling propensities of this variety also is a thing of the past, with very few exceptions indeed, as it is a thing that cannot be tested in a show pen, therefore the fancier's whole attention is directed to the production of the deepest color procurable in connection with good shape and carriage.

A NUTMEG STATE STORY.

Policeman Joseph Lussier, of Williamantic, Conn., has a queer freak chicken. The question which perplexes the observer is whether the freak is a hen or a duck. The hen-duck was hatched last May, and it has always borne the eccentricities herewith described. Its breed is the White Wyandotte. It has the head of a pullet and other characteristics, but its walk, posture, &c., are like the duck's. When walking its body assumes the upright position. Its tail is short and stubby, and has that peculiar wag such as only the duck can give it, and its legs and feet resemble those of a duck, though the feet lack a web. When it tries to cackle it makes a sound which is seemingly a mixture of a cackle and a quack. It eats from the ground like a duck and drinks a great amount of water. As yet the freak has not laid an egg or essayed to swim, and these may determine later to which family it belongs.

A poor incubator will sometimes hatch good eggs, but a good machine will never hatch poor eggs.

For Sale: 20,000 New York Farms

State Agricultural Department Wants to Aid Buyers in Selecting and Working Them

(N. Y. Tribune, March 4th.)

Desirable homes and healthful, profitable employment at man's primeval occupation, the tilling of the soil, can be obtained in New York State for thousands at bargain counter rates. More, the State itself is willing to help in the choice of homes and the obtaining of employment, while any politician will tell you that the "farmer is the State's particular pet."

Under these conditions, there would seem to be little reason why farms should go a-begging, and yet Commissioner Wieting, of the State Department of Agriculture, says that twenty thousand farms in this State are for sale. Most of them are unoccupied, and the prices asked are sometimes much less than the worth of the buildings on them. And the opportunities offered by these farms, he declares, are equal to any of the much vaunted farm lands in the West.

So serious does the State consider this question of abandoned farms, with its economic and political ramifications, that the Department of Agriculture is maintaining as a side issue a department of information regarding these farms, in connection with which is a sort of self-help bureau. The department prints bulletins giving all details in regard to these farms and agricultural conditions in the different parts of the State. The department will aid in the obtaining of tenants for farms, and when possible, help laborers to find farms they may work on shares.

"There's no reason why any man should go West for farms," said Commissioner Wieting to a Tribune correspondent, in discussing the subject. "Right here in New York State we can give him farms as desirable in every way, save, perhaps, in actual size, as anything the West can show, and we have in addition advantages in the way of railroads, roads, postal deliveries and educational facilities which surpass most agricultural regions of the West.

"Great portions of New York State, with rolling hillsides and fertile land, are just as available for grazing and stock farming as any other part of the United States. New York has fame as a dairy State. There's no reason why she shouldn't be as famous for sheep raising, except, perhaps, for the cur dogs which infest most country regions. I wish the bill which was put in a few days ago for the licensing or killing of dogs could be passed and enforced.

"The department is making an earnest effort," went on the Commissioner, "to repopulate the deserted farms and to let their advantages be known. We are trying systematically to induce agricultural people to settle in these regions. There's no mystery about the desertion of the farms—the expansion of business in all lines in the last ten years, mercantile, manufacturing and all kinds of improvements, have drawn the young men and the women alike from the farms and semi-rural districts. Many have deserted New York State and other States in the East, attracted by the

advertisements of the railroad companies telling of the beauties and advantages of the Western States and Canada. They have turned westward even the aliens who naturally would have come to interior New York.

"Now the State is going to try a little publicity on its own account. Probably fifty thousand farm workers can find immediate employment on the farms in this State, either as laborers or to work on shares. Anybody who wants to buy a farm, no matter what size or price, can be suited from the assortment we have catalogued and the additions which we obtain from time to time. And the advantages we put forth as arguments are not mythical.

"You can buy in some of the hill country land for, say, \$5 an acre, \$5,000 for 1,000 acres, a farm big enough for anybody to start on, which would be very profitable for sheep raising almost from the very beginning. You have your water, your grass, all the wood necessary on your farm; all you need is care and knowledge and a warm place to bring out early mutton and protection against the cur dogs. Then you get your profit. I'd like to take some of the land myself under those conditions.

"There's an excellent opportunity for the formation of small syndicates to take up this land—a good business proposition in any way. And grazing is not the only variety of farming which we can offer. You can get your fruit farms down around Poughkeepsie, or your mountain lands up in the Adirondack region. We'll point out dairy farms, poultry farms, hay farms, grain fields, and farms, just plain, general utility farms, of all sizes and prices. To use the advertising phrase, we aim to please.

"No one need fear to apply because we might not suit him. The difficulty now is to get the applicants. The aim of the department is to urge and encourage the better class of immigrants to settle on these farms, either as laborers or owners. We want especially the people from the north of Europe, the Swedes, the Norwegians and the North Germans—natural agriculturalists. They can find here conditions they never dreamed of at home, and we can give them better advantages than Minnesota, for instance, or the Dakotas, where so many of the Scandinavians settle.

"The department is making systematic effort to induce them to settle with us. We are working in co-operation with the various church mission societies and the immigrants' industrial organizations. We let our information spread around among these organizations, and answer their inquiries. We try to obtain employment and homes for any of the immigrants they may refer to us. The advantages we can show to them seem so apparent that it looks like only a question of time when we will get our farms occupied.

"Occupied they must be, for it's an important part of the State's economic system—this farming industry. Any sensible farmer with a decent farm is

MY S. C. REDS HAVE WON

New York State Fair, 5 Firsts, 5 Seconds.
Great Eastern Show, N. Y. C. 5 Firsts (Ribbons only.)
Gloversville, N. Y., 5 Firsts, Exhibit Special.
Springfield, Mass., 5 Firsts & Cup.
Auburn, N. Y., 5 Firsts, N. Y. State Cup.
Madison Square Garden, 2 Firsts and Second Pen.
Boston, Mass., 2 Firsts, Shape Special.
Schenectady, N. Y., 5 Firsts, 5 Seconds, \$50. Sweepstake Special.

World's Champion Wyandottes

GOLDEN, PARTRIDGE, WHITES AND COLUMBIANS

Madison Square Garden, 1906

I WON

The President's Solid Silver Cup, value \$100, for Best Wyandotte Cock, Hen, Cockerel and Pullet in Show—810 Wyandottes Shown

I HAVE furnished winners in Whites three years in succession, Partridge three years, and have won three years on Golden, making a clean sweep this year. Birds direct from my yards have won more prizes at Madison Square Garden, St. Louis, Boston and Chicago the past three years than from any other breeder. My birds have free range on twelve different farms

WHY NOT COME TO HEADQUARTERS?

Four pens White Wyandottes of America's best and the kind that breed winners

Six pens Partridge, as good stock as there is bred

Eight pens Golden, open laced all over

Two pens Columbians; Extra fine. Shown twice; Won all firsts

Single birds, trios or breeding yards

Eggs by the setting or hundred

A pleasure to show stock

Stock shipped on approval

All infertile eggs replaced free of charge

Telephone

641-642

Circular

Chas. H. Brundage, Danbury, Conn.

BARRED PLYMOUTH ROCKS

Grand matings; 7 for cockerels, 5 for pullets; 22 years a breeder, and for the past 10 years B. P. Rocks exclusively. Eggs, \$3. per 13 straight. Birds scored by Felch from 93½ to 95. Stock for sale at all times.

The Rosemer Running Water Fountain

For pigeons, poultry and live stock of all kinds. The biggest labor-saver of the day in the poultry line. Made by the L. W. Norton Co., 11 First St., New Brighton, L. I., N. Y. For sale by all dealers. Send for catalogue. tf

as prosperous as the city man with a good trade; he lives as well, as far as material comforts go; he's likely to be healthier morally and physically, and he's far more independent."

FULL LIST OF AWARDS GIVEN AT THE LENOX EXHIBITION.

The twelfth annual exhibition held at Lenox, Mass., January 9-11, was a grand success, both as to the number of birds and the financial outcome. There were over eight hundred entries, and the competition was of the keenest in some of the classes.

The classes were penned as follows: Light Brahmas, 15; Orphingtons, 32; White Plymouth Rocks, 44; Buff Plymouth Rocks, 45; Barred Rocks, 40; White Wyandottes, 39; Buff Wyandottes, 23; Rhode Island Reds, 85; Brown Leghorns, 40; Hamburgs, 20; Indian Games, 26; Standard Games, 45; Bantams, 104.

One of the notable exhibits was that of tiers of bears, eagles, foxes, raccoons, owls, pheasants, and Irish squirrels, all of which were alive and in their own skins.

The following were the awards:

LIGHT BRAHMAS—Cock 1 R. C. Congdon, 2 Elmcourt Farm; hen 1, 2 Elmcourt Farm, 3, 4 Congdon; pullet 1 Congdon; pen 1 P. Tyer.

BUFF COCHINS—Cock 1 A. L. Cutting, 2 H. H. Demont; hen 1 Cutting, 2 Demont; pullet 1 Cutting.

BUFF ORPINGTONS—Ckl 1, 2, 3 Griswold & Adams, 4 L. C. Pinney; pullet 1, 2 Griswold & Adams, 3 Pinney; pen 1 Griswold & Adams, 1 Valley Gate Farm, 3 Robt. Whitaker.

BLACK ORPINGTONS—Ckl 1, pullet 1, pen 1 Valley Gate Farm.

PARTRIDGE COCHINS—Cock 1, hen 1, ckl 1, 2, 3, pullet 1, 2, 3, pen 1 R. M. Dowd.

BLACK LANGSHANS—Cock 1 P. Tyer; hen 1 Tyer, 2 Jos. Keefer; pullet 1 Keefer.

RHODE ISLAND WHITES—Ckl 1, pullet 1 R. C. Congdon.

AMERICAN DONNUGUES—Hen 1 W. M. Shaylor; ckl 1, 3, 4 Shaylor, 2 L. A. Austin; pullet 1 Austin, 2 Shaylor.

HOUDANS—Cock 1 N. H. Hyde; hen 1 Jos. Keefer; ckl 1 M. J. Towney; pullet 1 Towney, 2 Keefer.

WHITE P. ROCKS—Cock 1 James Tetlow, 2 W. H. Shaylor, 3, 4 N. C. Messo, 4 S. P. Briggs; hen 1 Briggs, 2, 3 Tetlow; ckl 1 Messo, 2 Weston Wade, 3 Thos. Post, 4 Briggs; pullet 1, 3 Messo, 2 Tetlow, 4 Briggs; pen 1 N. C. Messo, 2 Briggs.

BUFF P. ROCKS—Cock 1 B. N. Duclos, 2 Thos. Briant, 3 Wilson & Hall; hen 1 Duclos, 2, 4 Briant, 3 Wilson & Hall; pullet 1, 2, 4 Briant, 3 Duclos; pen 1 Briant, 2 Duclos, 3 Wilson & Hall.

BARRED P. ROCKS—Cock 1, 3 S. W. Woodward, 2 R. H. Messenger; hen 1 Elmcourt Farms, 2, 4 Woodward, 3 Wm. J. Welsh; ckl 1, 3 Woodward, 2 Messenger, 4 W. D. Curtis; pullet 1, 2 Woodward, 3 Welsh, 4 Curtis.

WHITE WYANDOTTES—Cock 1 C. H. Willis, 2 Sam. M. Fox, 3 Harry M. Albro, 4 John W. Knowles; hen 3, 4 Willis; ckl 1, 2 Fox, 4 Albro; pullet 1, 2, 4 Willis, 3 Fox; pen 1 Valley Gate Farm, 3 Albro, 3 C. W. Hale.

BUFF WYANDOTTES—Cock 1 Chas. Berndt, 2 Mrs. Geo. Wilcox, 3 R. M. Dowd, 4 N. W. Hyde; hen 1 Berndt, 2 Dowd; ckl 1, 2 Berndt, 3 Hyde; pullet 1, 2 Berndt, 3, 4 Wilcox; pen 1 Berndt.

GOLDEN WYANDOTTES—Cock 1 S. P. Briggs; hen 1 Fernbrook Farm, 2 Briggs; ckl 1 John Baker, 2 Briggs; pullet 1 Briggs, 2 Baker, 3 Fernbrook Farm; pen 1 Briggs.

COLUMBIAN WYANDOTTES—Cock 1 H. G. Oles; hen 1 Oles; ckl 1 Oles, 2 Briggs; pullet 1 Oles, 2 Briggs.

PARTRIDGE WYANDOTTES—Cock 1, 2, 3, hen 1, 2, 3, ckl 1, 2, 3, pullet 1, 2, 3, pen 1 S. P. Briggs.

ANCONAS—Pen 1 Geo. Crew.

R. C. R. I. REDS—Cock 1 Glenburvine Farm, 2 John Baker, 3 W. A. Dickinson & Son; hen 1 W. D. Curtis, 2, 4 Glenburvine Farm, 3 Dickinson & Son; ckl 1 Curtis, 2 Pinecroft Farm, 3 W. J. Welsh, 4 Dickinson & Son; pullet 1 Pinecroft Farm, 2 T. W. Broderich, 3 Dickinson & Son, 4 Welsh; pen 1 Curtis, 2 Glenburvine Farm, 3 Dickinson & Son.

S. C. R. I. REDS—Cock 1, 3 S. P. Briggs, 2 M. R. Cunningham, 4 W. A. Dickinson & Son; hen 1, 3 Briggs, 2 S. C. Burghardt, 4 Dickinson & Son; ckl 1 Dickinson & Son, 2 Burghardt, 3 Briggs, 4 N. W. Hyde; pullet 1, 2 Burghardt, 3 Briggs, 4 Curtis; pen 1 Briggs, 2 Dickinson & Son.

R. C. WHITE LEGHORNS—Ckl 1, 2, 3 Sam. L. Bartlett.

S. C. WHITE LEGHORNS—Cock 1 Elmcourt Farm; hen 1 Elmcourt Farm; ckl 1 A. L. Cutting; pullet 1 Elmcourt Farm, 2 Cutting, 3 Fernbrook Farm.

S. C. BROWN LEGHORNS—Cock 1 Ben. F. Clark, 2 N. W. Hyde; hen 1 Clark, 2 J. L. Burt; ckl 1 David Mackey, 2 Elmcourt Farm, 3 T. K. Chaffee; pullet 1 Chaffee, 2, 3, 4 Elmcourt Farms; pen 1 Chaffee, 2 Clark.

R. C. BROWN LEGHORNS—Cock 2 John P. Kirby; hen 1 A. L. Cutting, 2, 3 Kirby; ckl 1, 2, 3 R. E. Engleman; pullet 1 W. Peck.

S. C. BUFF LEGHORNS—Hen 1 S. P. Briggs, 2, 3 J. H. Knowles; ckl 1 Briggs; pullet 1 Geo. E. Blake, 2 Briggs; pen 1 Briggs.

S. C. BLACK MINORCAS—Cock 1 Elmcourt Farm; hen 1 Elmcourt Farm, 2, 3 Fernbrook Farm, 4 W. A. Dickinson & Son; ckl 1 H. M. Albro; pullet 1 Dickinson & Son.

R. C. BLACK MINORCAS—Cock 1 R. M. Dowd, 2 N. W. Hyde; hen 1 Dowd; ckl 1 Dowd, 2 S. P. Briggs; pullet 1 Briggs, 2 Dowd; pen 1 Briggs.

GOLDEN P. HAMBURG—Cock 1, hen 1, 2, 3, ckl 1, pullet 1, 2, 3 R. M. Dowd.

S. S. HAMBURG—Cock 1 M. R. Cunningham, 2 Elmcourt Farm, 3 C. E. Humes; hen 1 Cunningham, 2 Elmcourt Farm; ckl 1 Elmcourt Farm, 2 Cunningham; pullet 1 Elmcourt Farm, 2 Humes, 3 Cunningham.

W. C. BLACK POLISH—Cock 1 Jos. Keefer; hen 1, 2 W. H. Demont, 3 Keefer.

BUFF L. POLISH—Cock 1 Paul S. Palmer.

COLOR DORKING—Hen 1 R. M. Dowd.

WHITE INDIAN GAMES—Cock 1 John Baker; hen 1, 3 Elmcourt Farm, 2 Baker; ckl 1 Thos. L. Sedgwick, 2 Baker, 3 Elmcourt Farm; pullet 1 Baker, 2, 3 Elmcourt Farm, 4 Sedgwick.

CORNISH INDIAN GAMES—Cock 1 C. H. Willis; hen 1, 2 Willis; ckl 1, 3 Paul S. Palmer, 2 Elmcourt Farm; pullet 1 Willis, 2, 3 Palmer.

PIT GAMES—Cock 1 Clarke Bros., 2, 3 Elmcourt Farm; hen 1, 3 Elmcourt Farm, 2 Clarke Bros.; ckl 1 Clarke Bros; pullet 1 Clarke Bros.

B. B. R. GAMES—Cock 1 J. H. Harder; hen 1 Harder; ckl 1, 2, 4 L. B. Gunn, 3 P. Tyer; pullet 1, 3 Gunn, 2 Tyer.

RED PYLE GAMES—Cock 1 J. D. Harder; hen 1, 2, 3 Harder; ckl 1 Tyer; pullet 1 Tyer, 2, 3, 4 Gunn.

BROWN RED GAMES—Hen 1, 2, 3 J. D. Harder.

GOLDEN D. GAMES—Cock 1, hen 1, ckl 1, pullet 1 J. D. Harder.

SILVER D. GAMES—Ckl 1, pullet 1 J. D. Harder.

BLACK GAMES—Ckl 1, pullet 1 J. D. Harder.

SPANGLE GAMES—Ckl 1, pullet 1 P. Tyer.

FRIZZLES—All first to Tyer.

PEA FOWLS—All first to Tyer.

B. B. R. GAME BANTAMS—Cock 1 R. Englemen, 2 R. M. Dowd, 3 C. H. Willis; hen 1, 2, 3 Englemen, 4 Dowd; ckl 1, 3, 4 Englemen, 2 Jas. Ellis; pullet 1 Ellis, 2, 3 Englemen, 4 C. W. Hale; pen 1 P. Tyer.

RED PYLE GAME BANTAMS—Cock 1 R. M. Dowd, 2 H. M. Albro, 3 P. Tyer; hen 1 Dowd, 2 Tyer; ckl 1 Albro, 2 Tyer; pullet 1 Albro, 2 Tyer.

BUFF COCHIN BANTAMS—Cock 1 A. L. Cutting, 2 F. F. Stevens; hen 1 Stevens, 2 R. M. Dowd, 3 Cutting; ckl 1 R. Englemen; pullet 1 C. W. Hale; pen 1 P. Tyer.

WHITE COCHIN BANTAMS—Cock 1, hen 1, ckl 1, pullet 1 R. M. Dowd.

PARTRIDGE COCHIN BANTAMS—Pullet 1 R. M. Dowd.

W. C. WHITE POLISH BANTAMS—Cock (Bearded) 1, ckl 1, pullet 1 Mrs. Robt. Whitaker.

R. C. BLACK BANTAMS—Cock 1 R. M. Dowd; hen 1 Dowd, 2 A. L. Cutting; ckl 1 Dowd; pullet 1 Dowd.

LIGHT BRAHMA BANTAMS—Cock 1 W. M. Shaylor; hen 1 Shaylor, 2 P. Tyer; pullet 1 Shaylor.

S. S. BANTAMS—Cock 1 R. M. Dowd, 2 W. H. Demont; hen 1 Dowd, 2 Demont; ckl 1 Dowd.

G. S. BANTAM—Cock 1, hen 1 M. R. Cunningham.

BARRED P. ROCK BANTAMS—Cock 1, hen 1, pullet 1 W. M. Shaylor.

SILKIES—Cock 1, pullet 1 Robt. Whitaker.

GOLDEN D. GAME BANTAMS—Pen 1 P. Tyer.

PEKIN DUCKS—1 pair Fernbrook Farm, 2 pair P. Tyer, 3 pair H. E. Heebner.

ROUEN DUCKS—1 pair Glenburvine Farm.

INDIAN RUNNER DUCKS—1 pair P. Tyer, 2 pair Jos. Keefer.

COLOR MUSCOVY DUCKS—1, 2 pairs P. Tyer.

WHITE MUSCOVY DUCKS—1 pair P. Tyer.

BLUE MUSCOVY DUCKS—1, 2 pairs P. Tyer.

WILD DUCKS—1, 2 pair P. Tyer.

TOULOUSE GEESE—1 pair P. Tyer, 2 pair Elmcourt Farm.

ENIDEN GEESE—1 pair P. Tyer.

AFRICAN GEESE—1 pair P. Tyer.

BROWN CHINA GEESE—1 pair P. Tyer.

WHITE CHINA GEESE—1, 2 pair P. Tyer.

BRONZE AND BUFF TURKEYS—All went to P. Tyer.

BELGIAN HARES—1 pr young P. Stickle, 2 pr young M. R. Cunningham, 3, 4 pr young P. Tyer; 1 pr old Stickle, 2 pr old Tyer.

PIGEONS—MAGPIES—1 pair Robert Whitaker, 2 pr W. M. Shaylor.

TRUMPETERS—1, 2, 3 pr R. Engleman.

JACOBINS—All to Duclos.

HOMERS—All to Tyer.

CATS—BLUE ANGORA—1 prize Jessie McLeod.

RACCOON—1st prize Mrs. Edwards.

ANGORA, YELLOW—1st prize P. Tyer.

BLACK CAT—1st prize P. Tyer.

CARIES—All to P. Tyer.

WISCONSIN STATE

POULTRY SHOW.

The ninth annual exhibition of the Wisconsin State Poultry Association was held January 15-20, at Oshkosh. It was by far the largest and most successful show ever held in the State. Over one thousand two hundred head of poultry were on exhibition, and the quality was of the very finest. The large Armory Building was full to overflowing, and Judges McClave and Lambert were busy three days in placing the awards.

In addition to the large display of poultry there were good displays of the leading incubators, brooders and poultry supplies, made by local and out-of-town firms. A most pleasing feature of the show was the large attendance of fanciers from all parts of the State. Many of them were exhibitors, others were present to renew acquaintances, and still others came as buyers. Excellent sales were reported.

Barred Rocks were the leading class with 185 entries. Specimens fit for any competition were on exhibition, and the winners, as well as many that were unplaced, can be counted top notch birds.

White Rocks brought out 125, all pure white well shaped birds. Here again the winners are of first quality.

Buff Rocks, a small class with average quality.

White Wyandottes numbered about 100. Honors were hotly contested, and the winners had to be good ones.

Buff, Golden Laced, Silver Laced, Silver Penciled, Partridge, and Columbian Wyandottes were well represented with some fine birds.

The Light Brahma alley was filled with large typical birds, that scored way up. Partridge Cochins class was strong, and the Black Langshans loomed up as strong as ever. Here were specimens that rank with the best in America.

The display of Leghorns was unusually large. In S. C. and R. C. Whites, S. C. and R. C. Browns, Buffs, and Blacks there were some of the very finest specimens, and quality was uniformly good throughout. The Minorca class is always well filled, this year being no exception to the rule. The winners were large, well shaped birds with good sound color.

The Cornish Indian alley should receive special notice for numbers and quality. After looking at the fine birds on exhibition it was not hard to understand the growing popularity of the breed.

Silver Spangled and Black Hamburgs were of fine quality.

The Rhode Island Reds were out over 100 strong. Many of the winners were of great merit, and the class as a whole was a credit to the breed.

Bantams are always shown in large numbers at the Wisconsin State Show. This year 225 of the little fellows were shown. In Games, Cochins, Sebrights and Japanese the exhibits were excellent. Many of the Bantams shown here have many winnings at the largest shows to their credit. Undoubtedly this was the largest display of the best Bantams in the West this season.

Turkeys and geese were of good quality, though few in numbers.

The complete list of awards follows.

BARRED ROCKS—Cock 1, 2, 3, 4 King Bros., 5 Silver Spring Farms; hen 1 G. W. Oaks, 2 J. H. Bierne & Son, 3 King Bros., 4, 5 Silver Spring Farms; ckl 1, 3, 5 King Bros., 2 Oaks, 4 Dr. Culham; pullet 1, 4 Robt. Adams, 2, 5 King Bros.; pen 1, 3 King Bros., 2 Oaks, 4 Robt. Adams, 5 Silver Spring Farms.

BUFF ROCKS—Cock 1 Bay View Poultry Association; ckl 1 Bay View Poultry Association, 2 N. C. Briester & Son; pullet 1 Bay View Poultry Association, 2, 3 N. C. Briester & Son.

PARTRIDGE ROCKS—All to Henry J. Hunt.

WHITE ROCKS—Cock 1 Carl Krippene, 2 A. J. Shannon, 3 C. M. Rene, 4 Henry Hunt, 5 Chas. Rose; hen 1, 3 Henry Hunt, 2 Chas. Rose, 4 M. C. Gerrard, 5 Carl Krippene; ckl 1 Krippene, 2 E. H. Korner, 3 C. M. Rene, 4 Rose, 5 Hunt; pullet 1, 2, 3 Krippene, 4, 5 Hunt; pen 1 Krippene, 2 Hunt, 3 Gerrard, 4 A. C. Hathaway.

BLACK JAVAS—All to Gerald Townsend.

SILVER PENCILED WYANDOTTES—All to Bay View Poultry Association.

PARTRIDGE WYANDOTTES—Cock 1 Wm. Mertz; hen 1, 2 Mertz; ckl 1 A. M. Wilson, 2, 3, 4 C. M. Barney; pullet 1, 2, 3, 5 Wilson, 4 Barney; pen 1 Wilson.

SILVER LACED WYANDOTTES—Cock 1, Wm. Harvy 2, 3, 4, A. M. Shaw, hen 1, ckl 1, 2, 3, 4 Harry Simpson, 5 Wm. Lutz, pullet 1, 3, 4, Shaw, 5 Lutz.

WHITE WYANDOTTES—Cock 1, GEO. Finch 2 A. F. Griebel, 3, 5, E. A. Schiller, 4, A. M. Shaw hen 1, 2, 4, Schiller 3, Griebel ckl 1, L. W. Kemnitz 2 Bay View Poultry Assn., 3 Otto B. Jordan, 4, Borne & Rice, 5 John Ross, pullet 1, 2, 3, 5 Schiller, 4, Borne & Rice, pen 1, 2, Schiller.

BUFF WYANDOTTES—Hen 1, 2 Wm. Mertz, 3 Frank Blood; ckl 1 Blood, 2 Mertz; pullet 1 Blood, 2, 3 Mertz.

COLUMBIAN WYANDOTTES—Ckl 1 Wm. Roesner, 2 H. C. Hunt; pullet 1 Hunt, 2 Roesner; pen 1 Hunt.

GOLDEN LACED WYANDOTTES—All to Ernest Lang.

AMERICAN DOMINIQUE—Hen 1, 2 John Haynes; ckl 1 Bay View Poultry Assn.; pullet 1, 3 Haynes, 4 Bay View Poultry Assn.

S. C. RHODE ISLAND REDS—Hen 1, 2, 3, 4, 5 Fred Badger; ckl 1, 3, 5 W. E. Holmes, 4 B. F. Philbrook, 2 Badger; pullet 1, 3 Holmes, 2 Bay View Poultry Assn., 4, 5 Homer Squab Co.

BUFF ORPINGTONS—Hen 1, 2, 4 John Haynes, Sr., 3 H. E. Rosenow; ckl 1 Rosenow, 2, 3 Bay View Poultry Assn.; pullet 1, 2, 3 Bay View Poultry Assn., 4 Rosenow.

WHITE ORPINGTONS—Cock 1 L. Strueburg; hen 1, 2, 3, 4 Strueburg; ckl 1, 3 Strueburg, 2 Bay View Poultry Assn.; pullet 1, 2, 3 Strueburg, 4, 5 Bay View Poultry Assn.

LIGHT BRAHMAS—Cock 1 Ed. Morris, 2, 3, 4, 5 E. H. Orvis; hen 1, 2, 3, 5 Orvis, 4 Morris; ckl 1, 2, 3, 4, 5 Orvis; pullet 1, 2, 3, 5 Orvis, 4 Morris.

PARTRIDGE COCHINS—All went to Mrs. V. M. Stewart.

BLACK LANGSHANS—Cock 1, 3, 4 W. H. Laabs, 2 M. O. Braaten; hen 2, 4, 5 Laabs, 1, 3 Braaten; ckl 1, 3, 5 Laabs, 2, 4 Braaten; pullet 1, 3 Braaten, 2, 4, 5 Laabs; pen 1, 3 Laabs, 2 Braaten.

WHITE LANGSHANS—Hen 1 W. H. Laabs.

CORNISH INDIANS—Cock 1 A. M. Schultz, 2, 3 J. H. Bierne & Son, 4 E. H. Orvis; hen 1 Schultz, 2, 4, 5 Orvis, 3 Bierne & Son; ckl 1, 4 Bierne & Son, 2, 3, 5 Orvis; pullet 1, 2, 3 Bierne & Son, 4 Orvis, 5 Schultz; pen 1 Bierne & Son, 2 Orvis.

S. C. BLACK MINORCAS—Cock 1, 2 Lee & Son, 3 Hassman Yaeger; hen 1, 2, 3, 4, 5 Lee & Son; ckl 1, 2, 3, 4 Lee & Son, 5 Bay View Poultry Assn.; pullet 1, 2, 3, 4, 5 Lee & Son; pen 1, 2 Lee & Son, 3 Bay View Poultry Assn., 4 Hassman Yaeger, 5 N. A. Bissonett.

R. C. BLACK MINORCAS—Ckl 1 Bay View Poultry Assn.

S. C. BUFF LEGHORNS—Hen 1 H. E. Rosenow; ckl 1, 2 Geo. Oaks, 3 Rosenow, 4 O. H. Becker, 5 Fred Reicht; pullet 1, 2, 3 Oaks, 4 Reicht, 5 Rosenow.

R. C. BROWN LEGHORNS—Cock 1, 2, 5 Fred Alger, 3 Bay View Poultry Assn., 4 J. C. Schultz; hen 1, 2, 3, 4, 5 Fred Alger; ckl 1, 2, 3 Alger, 4, 5 Schultz; pullet 1, 2, 3, 4, 5 Alger; pens 1, 2 Alger.

S. C. WHITE LEGHORNS—Cock 1, 2 W. B. Rieder, 3 G. E. Greenwood, 4 Albert Zier; hen 1 J. G. Walwood, 2, 5 Greenwood, 3 Zier, 4 S. F. Taylor; ckl 1 W. E. Holmes, 2 Greenwood, 3 Bay View Poultry Assn., 4 G. H. Becker, 5 A. H. McIntyre; pullet 1, 3 Walwood, 2 Greenwood, 4 Taylor, 5 Becker; pen 1 Walwood, 2 Greenwood, 3 Ernest Lang, 4 Taylor.

S. C. BLACK LEGHORNS—Cock 1 F. A. Allen; hen 1 T. A. Reynolds, 2, 3 Allen; ckl 1 Allen, 2 Reynolds; pullet 1, 3, 4 Allen, 2 Reynolds.

S. C. BROWN LEGHORNS—Cock 1 G. W. Lansman, 2 J. H. Bierne & Son; hen 1, 2 A. J. Klein, 3, 5 T. W. Umbrecht, 4 Bierne & Son; ckl 1 Bierne & Son, 2 Klein, 3 S. F. Taylor, 4 G. W. Lansman 5 Umbrecht; pullet 1 Bierne

& Son, 2 Taylor, 3, 4 Klein, 5 Umbrecht; pen 1 Bierre & Son, 2 Klein, 3 Taylor, 4 Homer Squab Co.

R. C. WHITE LEGHORNS—Hen 1 P. Simsen, 2, 3, 4, 5 W. F. Sommerfield; ckl 1 Simsen, 2, 3, 4, 5 Sommerfield; pullet 1, 3, 4, 5 Sommerfield, 2 Simsen; pen 1, 2 Sommerfield.

S. C. WHITE MINORCAS—Cock 1 C. Behrend; hen 1 W. B. Rieder, 2 Behrend; ckl 1 Bay View Poultry Assn., 2 Rieder; pullet 1 Bay View Poultry Assn., 2 Behrend, 3 Rieder.

HOUDANS—All to John Haynes, Jr.

SILVER SPANGLED HAMBURGS—Cock 1 Julius Kircheis; hen 1, 2, 3, 4, 5 Kircheis; ckl 1 Kircheis, 2 Bay View Poultry Assn.; pullet 1, 2, 3, 4 Kircheis, 5 Bay View Poultry Assn.; pen 1, 2 Kircheis.

BLACK HAMBURGS—All to Hassman & Jaeger.

YACKE BREASTED RED GAMES—All to James Prosser.

GOLDEN DUCKWING GAMES—Cock 1, 2 James Prosser; ckl 1 Bay View Poultry Assn.; pullet 1, 2 Bay View Poultry Assn.

GOLDEN POLISH—All went to Albert Damuth.

WHITE CRESTED BLACK POLISH—Cock 1, hen 1, 2, pullets 1, 2, pen 1 Frank Radford & Co.

SILKIES—Hen 1, 2 F. W. Radford & Co.; ckl 1, 2 Radford; pullet 1, 2, 3, 4, 5 Radford; pen 1 Radford.

BLACK RED GAME BANTAMS—Cock 1, 2 Fred Y. Parfrey, 3 F. W. Radford & Co.; hen 1, 3, 4, 5 Parfrey, 2 Radford & Co.; ckl 1, 4 Parfrey, 2, 3 Radford, 5 Boots & Stier; pullet 1, 2, 3 Parfrey, 4 Boots & Stier, 5 Radford & Co.; pen 1 Parfrey, 2 Radford & Co.

BROWN RED GAME BANTAMS—Hen 1 Fred Y. Parfrey; ckl 1, 2 Parfrey; pullet 1, 2 Parfrey.

GOLDEN DUCKWING GAME BANTAMS—Cock 1 Boots & Stier; hen 1 Fred Y. Parfrey, 2 Boots & Stiers, ckl 1, Parfrey, pullet 1 Boots & Stiers, 2 Parfrey.

SILVER DUCKWING GAME BANTAMS—Cock 1 L. Ruenzel; hen 1 Fred Y. Parfrey, 2 Ruenzel; ckl 1 Boots & Stiers; pullet 1 Parfrey, 2 Boots & Stiers.

BIRCHEN GAME BANTAMS—Cock 1, 3 Fred Y. Parfrey, 2 Boots & Stiers; ckl 1 Boots & Stiers, 2 Parfrey; pullet 1 Boots & Stiers, 2 Parfrey.

RED PYLE GAME BANTAMS—Cock 1 Frank W. Radford & Co.; hen 1, 3 Fred Y. Parfrey, 2, 5 Radford, 4 Boots & Stiers; ckl 1 Radford, 2, 3 Parfrey; pullet 1, 2 Radford, 3, 4, 5 Parfrey; pen 1 Radford & Co.

CORNISH INDIAN BANTAMS—All to Boots & Stiers.

GOLDEN SEBRIGHT BANTAMS—Hen 1 Fred Y. Parfrey, 2 Mayne McDonald; ckl 1 Parfrey, 2, 3 L. Shruburg; pullet 1, 2, 3 Shruburg.

WHITE JAPANESE BANTAMS—Cock 1 Frank Radford & Co.; hen 1 Radford & Co.; pullet 1, 2, 3, 4, 5 Radford & Co.; pen 1 Radford & Co.

BLACK JAPANESE BANTAMS—Ckl 1 pullet 1, 2, 3, 4, 5, pen 1 Radford & Co.

BLACK TAILED JAPANESE BANTAMS—Cock 1, 2, hen 1, 2, 3, 4, 5, ckl 1, 2, 3, 4, 5, pullet 1, 2, 3, 4, 5, pen 1, 2, 3, 4 Radford & Co.

SILVER JAPANESE BANTAMS—Cock 1, 2, hen 1, 2, pullet 1 Radford & Co. —Cock 1, hen 1, pullet 1 N. W. Radford & Co.

BUFF COCHIN BANTAMS—Cock 1 Boots & Stier, 2, 3 R. C. Williams; hen 1, 2 Boots & Stiers, 3, 4, 5 Williams; ckl 1, 2 Boots & Stiers; pullet 1, 2 Boots & Stiers, 3 F. C. Briester.

BLACK COCHIN BANTAMS—Cock 1, 2 G. M. Wells; hen 1, 2, 3, 4, 5 Wells; ckl 1, 2, 3 Wells, 4 R. C. Williams, 5 L. Shruburg; pullet 1, 2, 3, 4 Wells, 5 Williams; pen 1 Wells.

PARTRIDGE COCHIN BANTAMS—Hen 1, 2 Walter Brouk.

WHITE COCHIN BANTAMS—Cock 1 Irving M. Nelson; hen 1, 3 R. C. Williams, 2 Nelson; ckl 1 Nelson, 2 Geo. M. Wells, 3 L. Shruburg; pullet 1, 3, 5 Wells, 2, 4 Nelson.

WHITE HOLLAND TURKEYS—Cock 1 S. C. Radford; hen 1, 2, 3, 4, 5 Radford; ckl 1 Walton Pyre; pullet 1 Pyre.

BRONZE TURKEYS—All went to L. C. Jordan.

PEKIN DUCKS—Cock 1 L. C. Jordan; ckl 1 E. H. Orvis, 2 J. H. Bierre & Co., 3 A. M. Shaw; pullet 1 Orvis, 2 Bierre & Co., 3 Jordan.

MUSCOVY DUCKS—Ckl 1 A. M. Shaw. WHITE CALL DUCKS—1 pair Silver Spring Farm.

WHITE GUINEAS—1 pair Mrs. W. E. Holmes.

PHEASANTS—1, 2 pair Golden, 1 pair Silver, 1 pair Ringheads

WORKING HOMER PIGEONS—1, 2, 3, 4, 5 young pairs, 1, 2, 3, 4, 5 old pairs.

SHOW HOMERS—All to Ernest Lang. FANTAIL PIGEONS—All to Ernest Lang.

POUTERS—All to Ernest Lang.

OWLS—All to Ernest Lang.

SWALLOWS—All to Ernest Lang.

TURBITS—All to Edward Ziebell.

FRANK W. RADFORD.

DeGRAFF POULTRY FARM EXHIBIT AT SCHENECTADY, N. Y.

The exhibit of the DeGraff Poultry Farm, of Amsterdam, N. Y., is a fitting climax to the most successful year's work ever accomplished in the winning of first premiums at all the largest shows of the country on any one breed.

He advertises to have the best Rhode Island Reds in America, and as he never sells a prize winner, and is always ready to buy all extra fine specimens of his favorite breed, the following record will substantiate his claim to anyone's perfect satisfaction:

Single Comb Rhode Island Reds owned by this farm, and now in their breeding yards, have won the following prizes and cups and specials:

Five firsts at New York State Fair. Five firsts at Great Eastern Show, New York City. Five firsts at Gloversville, N. Y. Five firsts and Cup at Springfield, Mass. Five firsts and New York State Cup at Auburn, N. Y. Two firsts and one second at Madison Square Garden, New York City. Two firsts at Boston, Mass.

The Red Class is always the largest and most popular class in our local, Schenectady, N. Y., show (100 birds); still he wins nearly every prize competed for as follows:

First and second on pen of old; first, second and fourth on pen of young, second, third and fourth on cocks; first, second and third on hens; first, second, third and fourth on cockerels; first, second and third on pullets. All National Red Club Ribbons for shape and color. Grand Sweepstake Special (\$25 in gold) for best exhibit of show. Single Comb Rhode Island Reds' Special for best exhibit (\$25 in gold). Special for best exhibit of both breeds of Reds. Kerste Gold Lined Loving Cup for the best cock, hen, cockerel and pullet, five pairs of gloves besides several other specials.

His first prize hen is undoubtedly the best Red hen on earth, as she has won first at New York City, first at Boston, and shape special at both shows, defeating the winners of many of the other largest shows.

The Boston winner defeated both New York City and Springfield pullets, winning the color special at both shows. The first prize cockerel was also first at Auburn, N. Y., and defeated the Springfield, Madison Square Garden and the Albany, N. Y. winners, and was pronounced the best cockerel for breeding purposes that has been shown for a long time.

It is doubtful if there ever was an exhibit of Reds ever made by one exhibitor in this country that would compare in quality with this exhibit as a whole.—Schenectady Gazette, February 1, 1906.

OF INTEREST TO RED BREEDERS.

"A new day has dawned for the Reds." That sentence spoken by a prominent breeder, an authority on Red matters, at the close of the American Poultry Association meeting at Cincinnati, most aptly expresses the feelings of the Red breeders in attendance at the Cincinnati Show.

What called forth that remark?

First, the fact that the "Red Alley" contained 324 birds, the largest class ever shown outside of Boston, and the warmest ever show, Boston not excepted.

Second, the fact that the breed club,

the American R. I. Red Club, had endorsed the variety club, the National S. C. R. I. Red Club.

The fact that the Executive Committee of the National had been instructed to have printed a monthly paper, the Red Breeders Bulletin, devoted exclusively to matters of interest to Red breeders. To the fact that the two Clubs were working together for the welfare of the breed and without friction. To the fact that Mr. Baerman in the A. P. A. meeting had withdrawn his motion made at Minneapolis for the admission of the American Reds, and the fact that because of the cordial relations of the two Clubs the Baerman amendments providing for changes in color and weights of the present Standard, had been defeated. The breeder who made that statement was well within the truth. Mr. Baerman, notwithstanding his former endeavors deserves well at the hands of every Red breeder for his course, despite his convictions, and his courtesy in withdrawing his amendments.

That this is fully appreciated by his opponents is shown by the motion introduced by the Hon. C. N. Bryant, tendering him the thanks of the Association. With the American Red incident closed, the Baerman amendments defeated, and two active clubs, breed and variety, in the field, working in the utmost harmony, pushing the Reds, with a monthly paper devoted exclusively to the Reds, and with the Reds themselves, the grandest utility and fancy fowl of the century to build on, all at Cincinnati felt that a new day, indeed, had dawned for the Reds.

G. D. WILCOXON,

Secretary.

N. S. C. R. I. Red Club of America.

AWAY DOWN IN GEORGIA.

Burke County Fanciers Make a Successful Start.

The first annual exhibition of the Burke County Pet Stock Association was held at Waynesboro, Georgia, on February 1-3. H. H. Verdery, of Augusta, Georgia, was the judge. The awards were as follows:

BLACK MINORCAS—Cock 1, 2, ckl 1, hen 1, pullet 1, 2, 3, hen 3 S. L. Sullivan, hen 2 J. H. Whitehead; pen 3 W. C. Sandeford, Jr.

BANTAMS—Cock 1, ckl 1, hen 1 (11 years old), pullet 1 R. L. Phelps.

LIGHT BRAHMAS—Ckl 2 Mrs. Sim Bell; pullet 1, 2, 3, hen 2, 3 W. C. Hill.

WHITE PLYMOUTH ROCKS—Ckl 1 N. H. Bostick; pullet 2, ckl 3, hen 3 C. L. Rowland; cock 1, hen 1, 2 Gray Quinney.

WHITE WYANDOTTES—Ckl 1, hen 1, 2 Hamp Blount; cock 2, pullet 1, 2, ckl 2, hen 3 S. V. Bell.

BUFF WYANDOTTES—Ckl 1, pullet 1, cock 1, hen 2 S. V. Bell.

BUFF ORPINGTONS—Cock 1, hen 1, 2, ckl 1, pullet 1 J. H. Blount.

PARTRIDGE WYANDOTTES—Ckl 1, pullet 1 Mrs. Sim Bell.

BUFF PLYMOUTH ROCKS—Ckl 1, hen 1, pullet 1 R. B. Blount; ckl 2, pullet 2 W. C. Sandeford.

WHITE LEGHORNS—Cock 1 T. F. Buxton; pullet 1, 2, 3, ckl 2 N. H. Bostick.

BROWN LEGHORNS—Cock 1, hen 1, 2, 3 N. H. Bostick.

BARRED PLYMOUTH ROCKS—Pullet 2, cock 3 N. C. McNorrill; hen 1 Hamp Blount; hen 3, pullet 1, hen 2, pullet 3, ckl 3 W. W. Johnson.

BRONZE TURKEYS—Pen 1 W. C. Hill-house, pen 2 S. Schwarzwelss.

GEES—Gander 1, goose 1 G. A. Ward.

MUSCOVY DUCKS—Ducks 1, 2, 3 T. F. Buxton.

FANTAIL AND HOMING PIGEONS—Pair 1 J. B. Thomas.

BELGIAN HARES—Hutch 1 Julian Ellison.

This is an age of progress, but the poultry business is in the van.

BUFF WYANDOTTES

AT NEW YORK.

Editor American Fancier:—

Would you allow me enough of your valuable space to reply to an article on "Buff Wyandottes at New York," by Andrew Riddell, which appeared in February 10th issue of The American Fancier. Being a breeder of that variety and a beginner, as an exhibitor, I do not like to remain silent and see such an article go unanswered.

In the first place he partly describes the winning cock birds, but goes on to say that No. 1077, owned by Pensyl, is a model in type and should have been an easy winner, but was left out on account of "rough" legs.

For hens, he says 1st, 2d, 3d and 4th were all good ones, but says that 5th, owned by Pensyl, was easily the best hen in the class, except that neck hackle was a little small, caused by hackle feathers not being fully out.

For cockerels, he says 1st, 2d and 3d were all good birds with very little to choose between them, but goes on to say that 3d cockerel had the best type head and surface color.

The point I wish to bring out in this is that he could not see any good birds in the class except Pensyl's cock bird, Pensyl's hen, and 3d cockerel (Pensyl's). Why?

Simply because he sold Pensyl the cock, hen and cockerel, and of course wanted to see them win.

In conclusion, let me say that I don't like to see a breeder like Mr. Riddell begin to squeal in the poultry papers about the judging, simply because he does not like the judge that pudged the class, and, because his birds (the ones he sold to Pensyl) did not make as good a winning as he thought they should.

GEORGE M. BELL,

Voorheesville, N. Y.

THE CHICAGO SHOW.

Editor Frank Heck is responsible for the following:

There should be at least three poultry shows in the United States each season, each having an entry of more than five thousand specimens. We have two. They are Boston and New York. Chicago should be the third. It is up to the fanciers in the midwest states to say why it is not. Chicago like some other cities has for the past few years been trying to hold two shows each season. There have been two associations both striving for supremacy with the result that both have lost in prestige as well as financially. One has regularly failed to pay in full the premiums offered and the other has failed in other ways to give exhibitors a square deal. There has been only one show in Chicago this year and that has been one too many of its kind. It is said that comparisons are odious. This is especially true from the viewpoint of those who suffer on account of them. But those who allow themselves to be placed in such positions should not complain of the results. The Chicago show when compared with that of Boston and New York looks like a county fair as compared with a real show. Statements like this lay us open to ostracism and charges of heresy in certain quarters but these things cannot alter the facts in the case nor contribute even a mite toward influencing those who know from experience and observation that what we say is true. It is customary for the poultry press to throw sop to the management of poultry shows and tell the public with three column heads and stereotyped phrases what grand exhibitions have been pulled off and how everybody was delighted and well pleased. We are not going to do anything of the kind. The hundreds of small shows throughout the country get just as much consideration from

Successful Poultry Journal as the larger ones and none that fail to do the right thing by exhibitors will find Successful Poultry Journal ready to smooth things over for them. The main cause for complaint in cases where legitimate cause exists is that the interests of exhibitors are made subordinate to the personal interests of those behind the show. A poultry show should be conducted by those who are familiar with the interests of breeders and who know how and will cater to their welfare; success cannot be attained along any other line. The territory within a radius of three hundred miles of Chicago is the greatest poultry producing center in the country. Chicago should have the largest poultry show in the United States but the exhibition held last month was made up of less than 1,300 head of poultry and there would have been a much smaller number had it not been for the special efforts of two or three specialty clubs. Something is wrong somewhere and a part of this something is the disposition of breeders to sit quietly by and make no effort to better the conditions. There is more or less talk each season but it lasts just long enough to be well forgotten before the time rolls around for another show.

This is a pretty strong arraignment of the powers that are behind the throne at the Chicago Show. There is much food for reflection in what Mr. Heck says. It is his opinion and must be accepted on its face value. We do not believe Mr. Heck capable of misrepresenting the facts in the case. Our esteemed contemporary Poultry, seems to think that the Chicago Show was a great success, in fact, Editor Purvis plainly says so. What constitutes a real financial and realistic success of a poultry show is well demonstrated in the management of the New York and Boston Shows. We have been at several Chicago shows

and at one there were thousands of birds, but badly cooped and not well arranged. The low entry fee of fifty cents caused big entries and compelled the management to huddle a lot of birds in one coop, also double and triple tier some coops. This destroyed the artistic effect and made judging of birds a rather difficult matter. The late show with only 1,300 entries must have been far better in this respect. The scarcity of entries, no doubt, was caused by the two dollar entry fee. This may seem high to some of our Western friends but it is really the only safe financial scheme to make a big show pay. The New York Show can pay its premiums and all expenses before the doors are thrown open to the public. So can Boston. It is not our desire to criticize the management of the Chicago Show, but we believe as Mr. Heck does, that a little trip to New York and Boston and a week spent at each of the shows held in these cities would do the officers of the Windy City Show a great deal of good.

Chicago should and can have the biggest poultry show in the United States and there are men in the East who will undertake to manage such a show whenever the opportunity arises. This is no idle dream. It is a solemn fact. It is purely a business proposition and requires men of experience and backbone to carry it out. Petty squabbles among stockholders who are also breeders of poultry must be religiously avoided.

The success of New York and Boston Shows is greatly due to the fact that the principal officers have no axe to grind, no birds to show, and are free to treat all exhibitors alike.

Furthermore there should be one system of judging, either comparison or score card, not a combination of both. In large shows the score card is out of place. Birds must be judged the first day and all awards should appear in printed catalogues the following evening. This is business pure and simple. It enables the exhibitor to sell his stock on the strength of his winnings and satisfies the public. People that pay fifty cents to visit a poultry show have a right to know what they are looking at and who won the prizes. Prompt judging and a catalogue of entries and winners is the only and just way to do this. Get a move on Chicago!

The American Fancier confesses to having been a day or so late in getting out its first issue in Gotham. This issue is also several hours late, but hereafter all of our subscribers will receive their copy of the paper before the time to go to early church on Sunday.

A feature of The American Fancier will hereafter be the resuming of the Pilsener articles, which consist of some dissertations in broken English, as observed by an imaginative Dutchman.

The American Fancier is always yours to command. If you want advice, do not consider that it is cheap simply because you get it gratis. This is sort of an Irish bull way of putting it, but our readers will probably recognize that we do not want them to believe that the offer comes under the category "Advice is Cheap!"

COLD STORAGE BILL UP AGAIN.

Somebody seems to be playing the same old confidence game that has maintained at Albany for so many years.

The foregoing is merely an introduction to the announcement that it has been found that poultry lying in cold storage and not drawn is dangerous to eat. Such was the charge made before the Assembly Committee on Agriculture one fair afternoon last week. The occasion was a hearing on Assemblyman Fish's bill compelling the drawing of all poultry within forty-eight hours after the fowls have been killed. The cold storage interests of the State are up in arms against the bill, for, they say, it would ruin their business completely, for fowls that are drawn cannot be kept in cold storage, as they will decay.

Dr. H. Cavani, of Oneida, spoke in favor of the bill and said he was interested in it on account of a friend of his having died from potomaine poisoning as a result of eating a cold storage chicken. Dr. R. L. Crockett, of Oneida, also spoke in favor of the bill and said he and Dr. Cavani had made experiments on rabbits and other animals. They had found, he said, that poultry suffering from diseases of the stomach, became affected throughout the entire carcass after death, explaining that the disease seemed to leave the stomach and spread into the flesh after death, and rabbits, who had been fed the meat, died.

Thirty members of the Cold Storage and Hotel Men's Association of New York City, and George W. Brown, of the Game and Poultry Association of New York City opposed the bill. Mr. Brown made the argument against it and showed that it would be impossible to preserve a fowl that had been drawn.

The American Fancier urges its friends throughout the Empire State to get up in arms against the passage of this bill, which appears to be merely a strike against the interests of an industry, if you please, that has done much to promote the poultry business throughout the United States. If you have not done so, just put a word to your representative at Albany to vote against the passage of the measure.

While we do not impute the motive of Assemblyman Fish in introducing the bill, still we believe that Dr. Cavani is an alarmist of the first quality. There has been hundreds of people killed by potomaine poisoning through eating ice cream. Why not shut down on disposing of ice cream at church sociables? There is just as much sense in the argument as that put up by the learned physician who reared in favor of the bill.

Our traveling representative, Mr. George W. Weed, will be pleased to visit anybody in trouble in relation to standardbred stock, the mating and selection of stock and advising the best method to start to insure success, or in cases of disease or where fowls are not showing well. The charge will be simply for traveling expenses.

Never breed from a weak bird. Not a little of the good success of many breeders has come from observing this admonition. Then there is another injunction: Don't breed from immature pullets!

From The Editor's Perch

The American Fancier of March 3d was late in appearing but it got there as fast as human hands and brains could do it. This issue will be ready on time and after the machinery is properly oiled and all employees are up to their jobs, readers of this weekly publication can rest assured that they will be able to look over the contents each and every Saturday night or Sunday morning.

Look out for the "Boys and Girls Column." Cousin "Bob" Dennis is preparing a feast for the young fanciers and invites each and every one under twenty years of age to contribute articles for this department.

"Andy" Riddell makes a killing at Indianapolis with his Buff Wyandottes. He cleaned the deck and swiped all the blue ribbons. Shushon, New York, is all to the buff.

They do say some of the poultry editors are jealous of Grant M. Curtis because he was elected president of the American Poultry Association. "What fools these mortals be," to use a well-known but slightly transposed saying. Give President Curtis a fair chance to prove his worth, and do not criticise his actions before activity begins, and that is July the one, nineteen hundred and six.

Talk is cheap, but actions speak louder than words. That is why some fellows in the poultry business with swelled shirt fronts dominate at meetings and "ruinate" afterwards. The hot air bag of poultrydom is plainly in evidence at all times, but the advancing brigade of intelligent fanciers will make his existence less congenial in the future. The American Fancier will strive to puncture a few of these human airships from time to time. What we want is facts from practical poultry raisers and fanciers, not gibberish from inflated fakirs that are educated beyond their intellect.

We want every good chicken raiser, male or female, to write his or her experience. Never mind the spelling or grammar. State facts in your good old natural way. We will put them in shape.

"Deacon Ivory" Sparks, of Scranton, New Jersey, informs us that he has a goodly bunch of White Wyandotte chicks out and expects to have something pretty strong for the early shows. The story that he is going on the stage to do his famous stunt of changing a yellow dog into a pure white Wyandotte is a fake. The only real stunt the Deacon ever did was when he went in bathing at Atlantic City with a pair of umbrella covers in the place of the usual bathing suit.

We regret to learn that the old veteran, T. C. VanWyck, Superintendent of the famous Poughkeepsie Poultry Show Department of the Dutchess County Fair, has been seriously ill, but late advices indicate that he will soon be himself again and ready for the next big show in the old and historic Hudson River City.

Among the first of the new advertisers in the new American Fancier is Mr. C. W. Shaylor, of Lee, Mass. We have known Mr. Shaylor a long time, had the pleasure of handling and judging his birds on numerous occasions and feel it a duty to state that the Barred Plymouth Rock fancy is all the better for such men as he is known to be to his friends and neighbors. He represents the bone and sinew of what makes up a real fancier and breeder.

Mr. Joseph Shull, of Johnstown, N. Y., will take the road for The American Fancier and cover New York State, from Albany to Buffalo, in the next month. We have known "Sir Joseph" a very long time and also know him to be a chicken fancier from toe to crown. He knows a good bird when he sees it and what is more he can breed some mighty good ones himself.

The half-tone illustration on our title page gives a good idea of the quality of Columbian Wyandottes bred by Mr. Edward DeGraff, of Amsterdam, New York. It is safe to say that when snow flies again next winter there will be many fine clusters of the new Columbians at Mr. DeGraff's Yards. He has the material to work with and the ability to make the most intelligent use of it. As Columbian Wyandottes have been admitted to the Standard, we look for a decided boom in this new and handsome variety of American bred fowl.

Our big and genial old friend from Missouri, Theodore Hewes, writes us that he will quit judging after this. "Theo" has been at the game for eighteen years and judged at hundreds of shows, made hundreds of friends and tried to do the right thing wherever he went. We are sorry to see him leave the field he so ably handled but the increasing business of the Inland Poultry Journal requires his time from now on. He and "Happy Hooligan" Pierce are going to start a school for poultry judges at Indianapolis, Ind., and will endeavor to educate the aspiring candidate for poultry judge-ships in true and ancient form. More of the school later on. It is a good scheme, handled by responsible men.

The borrowed bird question, like Banquo's Ghost, "will not down." We have received a number of letters, heard many caustic remarks at shows, regarding what we have always deemed a rank injustice to honest exhibitors and a positive evil in the American poultry fancy, viz., borrowing birds to show. It is even worse; it is a curse. When John Doe shows a string of birds at Podunk and wins the blue ribbons, and Richard Roe takes the same birds to Oshkosh and makes a similar killing, and then allows Peter Poe to exhibit the same string at Tallalopolousa, there is something rotten in Denmark. The Does, Roes

and Poes all advertise their winnings and sell eggs and stock. Yet who owns the birds? It is not a square deal and no decent fancier will ever sanction such methods. In England exhibitors who are found guilty of such practices are debarred from showing for a period of years. The Poultry Club out there is more strenuous evidently than our American Poultry Association. The latter has a fine field to work to purify the show business. The time is at hand.

George W. Weed

WEED'S WANDERINGS.

Making Merry Meanderings in Massachusetts.

Spent Friday at the yards of R. M. Dowd, Lee, Mass., a past master in the poultry business, through years of experience in the cause of breeding standardbred stock. Mr. Dowd has a big aggregation of Buff Cochins, together with Buff Wyandottes, Rose Comb Black Minorcas and Golden Pencilled Hamburgs, and feels rather chesty over his collection of silver cups that he has taken by exhibiting his feathered beauties.

Then I hied me to the possessions of H. E. Heebner, also of Lee, and delighted my old optics by having a look at some of the finest Buff Plymouth Rocks as ever came from dreamland. Then I hiked to Master R. Gilmour's yards, who makes a specialty of Black Minorcas and White Leghorns, which take the ribbon off the shrubbery. Then away again, three miles or more, to the farm of Mr. D. Garnham, who thinks Barred Rocks good enough for him, and I certainly think the same way.

And the harmonica plays "Home, Sweet Home."

We got an early start for the home of William Shaylor, on Friday morning, but as he was not at home, continued on to Charles H. Shaylor's, in whom we found a true and tried friend of The American Fancier. This farm is one of the finest in Berkshire County, if not in the Commonwealth of Massachusetts, and is a grand contradiction of "Farming don't pay." Yes, Mr. Shaylor has a fine farm in a beautiful location, conducted on thorough business principles, which, of course, has placed it on a paying basis. But it is with the fowls that we have to do, so away with us to the poultry yards, and we shall see some of the finest Barred Plymouth Rocks in America. Here we find several pens headed by sons of Madison Square winners. One pen in particular took our fancy, a pullet mating and headed by the best pullet breeding male it has ever been our good fortune to handle. Mr. Shaylor has been a poultry enthusiast for twenty-two years, and for the last ten years has bred Barred Plymouth Rocks exclusively. His many winnings at our leading shows prove the quality of his stock.

GEORGE W. WEED,

Subscription and Advertising Representative.

Keep a strict account of everything, and you will learn that standardbred stock raising pays.

CHICKEN CROQUETTES.

Odds and Ends Left Over From Sunday Dinner.

Nest boxes should be put in the most secluded and darkest part of the house.

The earth floor is considered better than a wooden one, for the latter is usually damp.

Don't have holes in the side of your hen house, and you will not have a hole in your pocket.

This is the season when advice is free as to how to set a hen. Many overcome it by buying an incubator.

Ten hens are enough for one active rooster, so that the chanticleer need not be accused of being a Mormon.

The present prices being paid for standardbred stock, makes poultry raising a business of pleasure and profit.

The constantly increasing demand for beef scraps has caused the price to advance to almost a prohibitive figure.

The turkey crop grows annually less. It seems as if turkey growing on a large scale could be made very profitable.

There is a fascination in showing birds and taking a prize from a dozen competitors. Moral: Get busy for the next show season.

Don't be cruel to the old hen that wants to set. She is simply trying to carry out "Teddy" Roosevelt's ideas against race suicide.

Read The American Fancier regularly, whether you are a fancier, market poultryman, or look strictly after the egg basket.

The simple life on the farm will have to be abandoned for the time being, for the strenuous days of the hatching season are on.

Encourage your sons and daughters to take an interest in poultry. Along with the American mother, the American hen is the backbone of the country.

When you blow about your chickens, don't give eleven hens an average of twenty-four eggs a day. There are some people who will not believe the story.

The fellow who says, "Well, I didn't expect to win, for my birds were just picked out of the yard," is the biped who makes trouble for the man in the duster.

Do not overfeed your fowls and make them lazy. There are enough gourmets on earth in other walks of life, and man is the chief being in this particular.

The main trouble in poultry culture comes from the fact that few of the thousands who take up the industry have a correct idea of the conditions that bring success.

More incubators have been sold this season than ever before. This is not inscribed as a news item, but merely to fill space. Everybody knows that the standardbred stock industry is increasing, year after year.

When anything goes wrong about the poultry yards, find the cause. People who talk about "luck" and "bad luck," are usually the ones who do not try to ascertain how success came about or how the difficulty arose.

CLASSIFIED ADS

PLYMOUTH ROCKS.

COREY'S BUFF ROCKS AGAIN VICTORIOUS! At the Big Springfield Show, December 4-9, 1905, 1st cock, 1st, 3d hen, ckl., 2d 5th pullet, 1st pen; challenge cup for best display. Address Wayside Poultry Yards; M. J. Corey, proprietor, Springfield, Mass. 90-41

BUFF ROCKS EXCLUSIVELY.—We have mated up for this season's breeding our best birds selected from our Auburn winners, nice, rich, even buff, and will book a few egg orders at \$2.50 per 15. See Fancier for Auburn awards. Stephen Westlake, 17 Union St., Auburn, N. Y. 96-47

BARRED ROCKS.—14 GRAND MATINGS, 7 for ckl., 7 for pullets; Madison Square winners in both matings. Birds scored at 1905 show, by leading judges, from 93 1-2 to 95 1-2 for females. Eggs, \$3 straight, per setting. C. H. Shaylor, Lee, Mass. 94-45

BLUE BARRED PLYMOUTH ROCKS, exclusively Bradley Brothers' strain, double matings, prize winners. We aim to please our customers. Eggs from choicest matings, \$3 for 15; \$5 for 30. 60 per cent hatch guaranteed or duplicated at half price. Incubator eggs, \$5 per 100. S. D. York, Deposit, Broome Co., N. Y. 52tf

WHITE PLYMOUTH ROCKS. FISHEL'S are the best in the world, winning more prizes at World's Fair than any other two White Rock Exhibitors. My new 48-page catalogue is the finest poultry catalogue ever issued. Send three 2-cent stamps for a copy. 5,000 birds to sell. Address U. R. Fishel, Box D, Hope, Ind. 532tf

BUFF PLYMOUTH ROCKS.—THREE pens headed by three grand males. Winners of 15 firsts, 6 seconds, 3 thirds and 11 specials. You are sure to get winners from these matings. Eggs, \$2. A. E. Raymond, Erie, Pa. 80-tf

EDDY'S BUFF ROCKS EXCLUSIVELY.—I have three hundred breeders mated for best results. Extra good layers. Eggs, special mating, three dollars per thirteen; regular \$2 layers, \$1. Discount on large orders. The Poplars, D. B. Eddy, Prop., Somerset, Mass. 94-tf

RIDGELEY'S BARRED PLYMOUTH ROCKS, won at Herald Square and Madison Square. Birds and Eggs for sale; eggs, \$3 per 13. Joseph Phipps, Mgr., Towson, Md. 01-52

Raise Every Chick

If every Chick hatched last season had reached maturity in 60 to 90 days—hardy, strong and vigorous—how much extra money would you now have in the bank? You could have SAVED these Chicks—every one—if you had used

Purina Poultry Feeds

—for one kind—Purina Chick Feed, is made on purpose to save the lives of little Chicks, and make them grow like weeds. And it DOES IT. Brings up the highest percentage of every hatch EVERY TIME.

The other Purina Feeds MAKE EGGS—make your hens lay all the year 'round—make zero weather eggs EASY. They do this EVERY TIME, and with EVERY HEN, too. These may sound like "broad statements."

But don't take OUR WORD for it—try it—prove Purina Feeds yourself by feeding them to your hens or chicks at OUR EXPENSE. If the RESULTS don't come, just tie up the bag and write us, and we will return every penny of your money, and tell you what to do with the unused feed. You are not out a cent in making the trial, for we will supply you through your dealer or direct.

FREIGHT PAID, EAST OF THE ROCKIES. and the feed used in testing will cost you nothing. Send us your dealer's name. This is the Money Back line. Ask for particulars about our FREE TEST Plan. Write today—you can't afford to wait. Purina Mills, K St., St. Louis, Mo. Pacific Coast orders filled by Acme Mills Co., Portland, Ore. Canadian orders by The Tillson Co. Ltd., Tillsonburg, Ont.

Keeps Poultry Healthy

VIGER'S

Crushed Charcoal

Prevents Disease

Chemically pure, keeps poultry strong, healthy and in good laying condition. Corrects wrong feeding. Not a drug, but Nature's own purifier. Curing the Birds

MR. HUGO FREESE, of Rochester, N. Y., who is himself a practical poultryman, has a sure roup cure which is at once effective and simple in its application.

All that is necessary is to put the directed amount of his preparation in the drinking water, and every time the birds take a drink they take their own medicine along with it, and a speedy cure follows. Mr. Freese also also manufactures an egg producer for making hens more prolific layers. Elsewhere in this paper he has an advertisement of these articles. Mr. Freese is quite well known as a fancier, his specialty being Rose Comb Rhode Island Reds. Parties desiring eggs from these choice fowls or further information concerning his remedies should address

MR. HUGO FREESE, Rochester, N. Y.

D. & H. ANNOUNCEMENT

THE D. & H. CORPORATION, J. H. Drevenstedt, President and Treasurer, and R. L. Hutchings, Secretary, will take possession of Columbia Stock Farm, at Red Bank, New Jersey, on April 2nd, 1906.

This finely equipped plant will be run as a practical poultry farm, the production of choice eggs and meat for market being a specialty.

J. Frank Hiller, formerly of Fort Plain, N. Y., will be the poultryman. The plant itself will be under the personal supervision of J. H. Drevenstedt and will be used as an experimental farm for the AMERICAN FANCIER.

The varieties are: American, Buff Plymouth Rocks; Italian, White Leghorns; French, La Fleche. These were selected for their superior excellence as the most profitable producers of their respective races.

The Buff Rocks represent the best blood in America. The White Leghorns, the best and hardiest egg laying strain obtainable. The La Fleche, the best selection of Canadian and French birds.

We will state right here that we will advertise no eggs for sale or compete in any way with advertisers in THE AMERICAN FANCIER.

This is purely a business proposition based on carefully prepared lines. It is the intention of the D. & H. corporation to do all it can to help the poultry business in the United States and plans have been made to send teams of representative birds next fall to the great shows of England and Canada, each individual exhibitor showing his birds in his own name. We simply act as agents.

Mr. George H. Burgott, the well known expert judge and fancier, has been engaged to take charge of the exhibits. The scheme is as broad as it is large and it will result in much good to all concerned.

The above is a partial explanation of the D. & H. advertisement in the poultry papers of "The Square Deal" and "Ask Drev."

More later.

Young's Strain S. C. W. Leghorns**I HAVE NO OTHER BREEDS**

My strain again for the sixth consecutive year shows its superiority by winning more prizes at Madison Square Garden, New York, in the strongest competition ever known, than all others combined, including 17 specials, and again winning the National S. C. W. Leghorn silver cup. Two weeks later I almost duplicated my wonderful win of last year at Boston by winning 9 prizes on 9 entries against the most prominent breeders of the east. My winnings for 1906 at the world's two greatest shows are as follows:

BOSTON	NEW YORK
Pen—1st.	Pen—4th.
Pullets—4th.	Pullets—1st., 2nd., 5th.
Hens—1st., 4th.	Hens—2nd.
Cockrels—1st., 2nd.	Cockrels—1st., 4th.
Cocks—1st., 2nd.	Cocks—1st., 3rd., 4th.

THIS RECORD has never been equalled by any other Leghorn breeder in America.

I WON

The President's Solid Silver Cup, value \$100, for Best Wyandotte
Cock, Hen, Cockerel and Pullet in Show—810 Wyandottes Shown

I HAVE furnished winners in Whites three years
in succession, Partridge three years, and
have won three years on Golden, making a
clean sweep this year. Birds direct from my yards
have won more prizes at Madison Square Garden,
St. Louis, Boston and Chicago the past three years
than from any other breeder. My birds have free
range on twelve different farms

WHY NOT COME TO HEADQUARTERS?

Four pens White Wyandottes of America's best
and the kind that breed winners

Six pens Partridge, as good stock as there is bred

Eight pens Golden, open laced all over

Two pens Columbians; Extra fine. Shown twice;
Won all firsts

Single birds, trios or breeding yards

Eggs by the setting or hundred

A pleasure to show stock

Stock shipped on approval

All infertile eggs replaced free of charge

SEBRIGHT BANTAMS

From The Feathered World—By R. Wiseman Cunningham, M. D.

III.

Breeding.—In the breeding pens it is natural that we should all like the inmates to be perfect. This cannot be so, so we must content ourselves, as far as our pocket will allow, in procuring the best specimens which are suitable to be mated together. Very

Finely Laced Cock.

good birds naturally cost a considerable sum of money. Better possess yourself of one really good pair, bearing some blood relationship to each other, than a number of Sebrights of inferior quality which will never produce any chickens worth looking at.

Avoid the faults in your breeding birds which are most reproductive—white throats and bad tails especially. Failings must be corrected by judicious matching. A cock weak in breast lacing requires to be mated with hens exceptionally good in the breast lacing. The produce of two Sebrights defective in lacing on the same part more than likely will be chickens with that defect exaggerated. Too heavy lacing is corrected by mating with very finely-laced birds of the opposite sex. All this sounds very simple in theory but it is by no means so easy a matter in practice when you have a limited stock to select from. By studying the influence of sex on the progeny, I quite agree with the theory that the male has the most influence on color properties, the female on shape and size.

Do not take the advice that is frequently given, to mate a small cock with large hens. Let the hens be small in size, and the cock excel in feather properties.

Nowadays it is usual to recommend a cockerel breeding pen and a pullet breeding pen. My experience is that in most cases all your best show birds are the produce of one pen. However, it may be as well to describe the mating which is usually advised for the

production of exhibition birds of each sex from different pens.

The Cockerel Breeding Pen.—The cock or cockerel should have a good comb. His lacing should be sound and inclined rather on the heavy side, particular attention being paid to the throat, wing butts, and tail; the latter especially should have the ground color perfectly clear and every feather heavily laced. The secondaries also should have every feather well laced, but this is nearly always the case in birds with well-laced tails. The cock should show as much mulberry color as possible in the face.

The hens for this bird should preferably all be of one age, and excel in shape and carriage, and be also small in size, so far as is conducive to good health. They should be three or four in number, and of the exhibition type, very finely laced, and clear in tail. Any slight failing in the density of the lacing in the hens will in the majority of the chickens be corrected by the

An Old Palace Cup Winner.

excellent coloring of the cock bird.

From this pen I should expect a number of chickens, both cockerels and pullets, to be just too heavily laced for exhibition purposes in their first year, but some of the cockerels will certainly be up to exhibition standard.

The Pullet Breeding Pen.—The cock or cockerel again here must have good head points. His lacing should be very thin and even throughout, including the secondaries and tail. The latter I should particularly recommend to be perfectly white, without any grizzling or splashing on the ground color. I am afraid that, in writing, it is easy to advise one not to use Sebrights with bad tails, but perfect tailed birds are almost impossible to procure, and one can only use the best available.

The hens suitable for this pen

should preferably all be of one age, as in the cockerel breeding pen, unless one can remember their quality of lacing as moderately young birds. They should be just too heavily laced to make good show birds, and the lac-

Another Prize Winner.

ing must be very dense green-black, sharp and even all round every feather right up to the throat; the tail and secondaries clear in ground color and heavily laced. From this pen you would certainly take a number of exceptionally fine cockerels and pullets, with a small percentage of wasters.

With many other Sebright breeders, I agree that the fine lacing is best on the cock in the breeding pen, and certainly for anyone desiring to breed from a single pen I should select a finely-laced cockerel with heavily-laced pullets.

All the hens used for breeding purposes should be mulberry-colored in comb and face; this is a point which we are rather apt to overlook, so many of the winning birds having a very poor apology for a gipsy face.

Sebrights, being birds of "feather properties," will not stand indiscriminate crossing of different strains; nothing is more disastrous to breeding for color than the introduction of new blood. Inter-breed your own birds until weakly chickens and other evidences of bad health show you that you have gone too far; then introduce new blood of the same strain as your own from another fancier. This advice has been drummed into readers of the Feathered World thousands of times, and yet we get letters from men who ought to know better, asking for a Sebright cock and two hens which must not be related to each other in any way. Of course, if you intend to inbreed the produce, sire to the pullets and cockerel to the old hens, then you

are on the right track; but it is a long way round to get to the goal.

Once in four or five years is sufficiently often to introduce new blood. Write to a well-known fancier; tell him what you intend to give for a trio of breeding birds, which, of course, are sent on approval, provided you deposit the money, or give some guarantee of your respectability. Get some friend who knows a Sebright to advise you as to their value, or if you have no such friend, do as I have done—trust the vendor. Do not do as I once did when a boy—copy the description of a pair of Sebrights out of a book, and ask the vendor to send you such a pair for the colossal sum of £2. Mr. M. Leno was the vendor on that occasion, and wrote me that he had not yet seen such a pair, but would let me have his best for £20. That cured my Sebright fever; but later on I had a serious relapse balanced with common sense.

Sometimes we may pick up first-class Sebrights extremely cheap, but, as the number of fanciers in this variety is rapidly on the increase, more extensive classification at a number of shows is provided and guaranteed by the Sebright Club. Sebrights will become more and more the fashionable Bantam, and prizes are likely to keep up. Selling classes at the larger exhibitions always contain a few good birds worth buying.

Having alluded to the Sebright Club, I may mention that a society of fanciers devoted entirely to this variety of Bantam existed in Sir John Sebright's time, but for some reason or other was allowed to become extinct. The present society has only had four years in which to gain the confidence of fanciers, but now consists of twenty members, and has a considerable sum of money to its credit. All that its expenses consist of are the guaranteeing of classes at a number of shows, printing and stationery. Our hard-working secretary, Mr. Heywood, is a man of sterling worth and sound moral character, and every effort will be made by the society to promote the well-being of our favorites, and all dishonorable practices will be immediately suppressed by the club.

Hatching and Rearing.—Cross-bred Silky-Pekin hens are amongst the best for sitting purposes. Eleven eggs are sufficient to set under each hen. It is better, if possible, to have two or three sittings put down at the same time. At the end of a week the eggs should be examined for fertility. The fertile eggs may then all be given to one hen, if they are few in number, and new sittings given to the remaining hens,

thus gaining time and space. I much prefer hens to incubators, unless you have a lot of time to attend to the incubators personally. Neither do I care for artificial brooders for Bantams; one or the other of the chickens is always being left out in the cold. A hen is always busy attending to every want of her little ones, and rushes off at once to attend to any calling out in distress. I have used incubators with success, but have never done well with artificial brooders.

Twenty-one days is the period of incubation for Bantams' eggs—the same as in large fowls. At the end of that time, and not till then, should the sitting hens be disturbed to examine the eggs. All broken egg-shells left by hatched chickens should be removed, and the remaining eggs examined to see if they are chipping. I always give the remaining eggs twelve hours' grace; at the end of that time I enlarge any opening in the egg to see if the chicken is ready to emerge, and if so help it into the world. Any eggs which show no indication of chipping should also be opened gently at the large end, and their contents inspected. For the first twenty-four hours the chickens require no food whatever, and ought not to be disturbed. The first feed consists of crumbled hard-boiled eggs and fine oatmeal. Feed every two hours, except at night, when I consider the feeding of chickens by lamplight an absurdity, and quite contrary to the laws of nature. I always leave a small saucer full of dry oatmeal to be picked up in the early morning if they are hungry. A day or so later well-boiled rice should be added to the egg and oatmeal. After the chicks are five days old rice and oatmeal alone is a suitable diet, with a sprinkling of fine grit and chopped green food. Continue this for four weeks, after which time a mixture of boiled rice, oatmeal, and Indian cornmeal should be given morning and afternoon with a mid-day and late evening feed of wheat or dari. So long as the chickens are on soft, pulpy food I give no drinking water, and have no trouble with attacks of diarrhoea or gapes; both of which diseases are often caused by contaminated drinking water.

Damp in any form is most fatal to Sebrights at any age, more especially so in cold weather. Keep the houses and runs dry and clean. Leave no food lying about to get soured, supply fresh water daily. I do not care to remove the chickens from their mother until the head and breast are well covered with feathers.

Feeding Adult Sebrights.—In winter I give a warm feed first thing in the morning, consisting of oatmeal, Indian meal, and scraps of bread and meat. About mid-day wheat or short oats, a good handful to three birds, and again in the evening another feed of grain. Plenty of green food such as grass, lettuce, cabbage, etc., also fruit; and a quantity of sharp flint grit should always be at hand, and a constant supply of fresh water. In the summer I feed only twice daily, soft food occasionally in the morning, grain in the afternoon.

Sebrights are an active breed; the more exercise and foraging about they are allowed to enjoy, the better will they thrive. I have, however, kept them penned up under most adverse

conditions with success; but scrupulous attention to sanitation and plenty of green food are essential to maintain the good health of bantams in confinement.

The End.

WHAT A RACING HOMER OUGHT TO BE.

Now, what qualities have birds to possess to fly long distances? Pluck, brains, and bodily strength. Pluck and brains are useless without the necessary physical properties to make use of them. There is a great difference in the ease with which birds fly. Great store is set by some on plentiful (perhaps excessive would be a better word) covering feathers over the back and very broad flights. Neither of these, in my opinion, is very important. I like a wing shaped something like a scythe; birds with straight wings are generally very much divided at the outside flights when the wing is opened. Plenty of body feather I attach much importance to, and never breed from a bird with any tendency to be short in that respect. I prefer a fair length of tail, also rather long wings. Needless to say the stouter the quill and the more elastic the web of the wing feathers the better. Depth of color is also a point I try to mate for, and when through a moult it is a good sign if there is a richness about the bird. This applies to all colors, equally to a light red chequer, or light blue chequer, as to a darker chequer bird of the same color. A Homer has to fly not walk, and I much prefer a medium bone bird to one with big bone and clumsy feet. The color of the eye I don't trouble about, as long as it is bright and healthy. Unless the seller advises that two particular birds (that seem likely to suit in other respects) should be paired together, I would suggest that a novice should try to obtain the advice of some experienced fancier and pair his birds with the idea of producing make and shape. It is doubtful if some will ever become successful breeders, as there is a very useful aid to success called "The breeder's eye." One word more, don't pair two nervous birds together; nervous birds are very trying, not only to themselves, but to their owners as well. In conclusion let me repeat "What is worth doing at all is worth doing well." Couple this with patience and you will succeed.

RACING MAN.

HOW TO TELL AN OLD HEN.

A correspondent gives the following method of telling an old hen from a young one. In lifting up the wing and pushing aside the feathers of the sides, you will find, in the case of a young hen, a long down, light and close, arranged regularly between the other feathers which cover these parts of the body. Through the skin, which is of a delicate and rosy tissue, the very small blue veins will be apparent. In a hen more than a year old, the down and the veins will have disappeared, the skin is of dull white and dry, less smooth and somewhat farinaceous looking. The smooth leg, with fine bright scales, is also one of the best indications.

Economy is not always good management in poultry, and frugality is often synonymous with stinginess.

Read a discussion recently on "Hoodoo Pens," the impression being given that in a certain pen no flock would lay well, but upon being given other quarters would improve at once.

Have been having some such experience. When I mated up, the first flock was taken to the pen farthest down the house, one sash in this pen has been removed and muslin tacked on in its place, giving the pen a darkened appearance, whether this caused the hoodoo I cannot say; the flock was laying fairly well but dwindled day by day to nothing, and stayed there; had ravenous appetites so I fed them extra, hoping to get them going again. You can easily judge my feelings when I found them as heavy as lead and fit for the butcher.

A chance purchase was the means of their being moved to lighter quarters, since when on a broader ration they have resumed laying.

The newcomers who occupy their old pen are allowed their liberty and when they get settled in their new home and accustomed to the surroundings, probably will not be affected by the hoodoo.

On several occasions in buying a bunch of laying hens I have noticed an improvement in the size of the eggs under my feeding. In the case of pullets, where they are checked by moving it is a natural supposition that upon a resumption of their duties they will lay a larger egg, but I have noticed the same improvement in hens.

I am a great believer in No. 1 wheat middlings for the major portion of the morning mash as an egg producer, and a producer of eggs fit for market.

I see a whole lot about the 200 egg a year trap nest hen, but nothing about the big eggs she lays.

Which is best? A fine large egg that commands a premium in any market, or little dirty undersized eggs that no one wants, and to sell which it takes a lot of nerve to sneak into a grocery, even after dark, and take them out in trade.

I see that my Middletown neighbor, who poses as the Poultry Sage of the Rural, claims to have not gotten an egg from 1,372 Leghorns for a period of six days.

It is a mystery how a flock of this size could be kept from laying a single egg for so long a period, unless the feed troughs were turned upside down at the approach of winter.

Several here claim to have done better in the cold winter just preceding, rather than during the more open winter just passing.

To sum up, I claim that the heavy breeds which sport a red ear-lobe and a lot of feathers are the real winter layers.

That the hen moulting early in the

summer, will lay the eggs in the fall and winter.

That the hen which continues to lay during the summer and fall, and then moults, will not figure as a layer again until spring approaches.

And that it is useless to force a pullet to lay until her age admits of her laying an egg of market size—that's all.

WINTER EGG-LAYING.

Consul Daniels reports from Sheffield, England, a novel egg-laying competition at the Lady Warwick's Ladies Agricultural College. The conclusions reached are that breed does not govern so much as the laying strain or families of a breed highly developed as egg producers. The pen of four Buff Orpingtons led from Oct. 16 to Nov. 16 by producing 49 eggs, and again Nov. 16 to Dec. 16 with 120 eggs.

One thing the present competition shows is the little help it is to birds to be what show enthusiasts call "beautifully marked," for as often as not it is the ordinary-looking competitors, birds a show judge would laugh at, that have the biggest total of eggs to their credit. In the winter laying competition what stands a bird in good stead is not that its father was the winner of a medal, but that its mother and its grandmother were wonderful layers, and that its male parents also came of a good laying strain.

POINTS ON IN-BREEDING.

While admitting that in most instances breeders of fancy poultry have persisted in breeding to feather despite frequent warnings that by so doing they would ultimately work ruin in their stock, it is an undeniable fact that the birds of to-day have never been equalled for beauty and markings of plumage, grace of outline and perfection of all other properties. That the laying powers of some varieties have materially suffered is equally true, but that the love for fancy poultry is ever likely to suffer is hardly possible, while by means of judicious crosses of pure breeds the best egg producers as well as the best table poultry can easily be obtained.

AMERICAN BUFF

PLYMOUTH ROCK CLUB.

The ninth annual meeting of the American Buff Plymouth Rock Club was held in connection with the National Fancier's Association Show in Chicago, Wednesday, January 24th, 1906.

In the absence of the president and vice-presidents, the meeting was called to order and presided over by Mr. C. A. Morton.

The following named were elected officers for the present year: President, W. C. Denny; Eastern Vice-President, M. F. Delano; Western Vice-President, J. J. Keig; Southern Vice-President, C. W. Fowler; Secretary-Treasurer, C. A. Morton; Executive Committee, F. C. Shepherd, S. D. Laphan, B. E. Johnson.

The membership list will be published in March, and every breeder not already a member is invited to join at once. Send \$1.00 each for membership fee and annual dues to

C. A. MORTON,
Secretary-Treasurer,
St. Louis, Mo.

PIGEON MILK.

Danger Arising From the Soft Food.

There are many little points which can upset a pigeon in the breeding season, and perhaps the most dangerous is a sour crop, arising from a failure to hatch. The natural consequence is that the "milk," or pap, which is the squab's food remains in the crop of the old bird and turns sour. This pap forms around the sides of the crop, and until about the sixth or seventh day after hatching is the squab's only food. This is a simple explanation of the pigeon's "milk," and I need not go deeper into it to drive home the point that caused me to take up my pen. Of course, a failure to hatch means that this pap has to be got rid of by the old bird, and in many cases it passes away without much trouble through the digestive organs. If it does not leave the crop speedily and naturally (and I believe there is a natural exit for this unused pap) then a pigeon may develop a serious illness. This sour waste must be removed, and perhaps, the best way is to make the bird disgorge the mess. Dissolve some Epsom salts in a little warm water, and make the bird drink. Soon afterwards, when the liquid has nicely settled, hold the bird's head downwards, and make it disgorge by working your fingers from the bottom of the crop upwards. You will be astonished what a foul smell the stuff has that comes away from your bird.

However, sour crop should not trouble a pigeon fancier if he watches his breeding operations carefully. He need not be troubled with it at all, because he is pretty certain to have a young one ready for a pair that fails to hatch. I have frequently found that one is pretty safe in putting under such a pair a youngster as old as three or four days, and sometimes older, but in the latter case there is a risk of it not being taken to. The easiest and best preventative of any chance of sour crop is to see that the unfertile eggs are taken away after being sat upon 14 days. Of course, I only refer to unfertile or clear eggs, about which there is no doubt that they will not hatch. By taking these clear eggs away after being sat upon a fortnight there is no danger of sour crop, as the pap or milk will not have formed in the old birds. I must impress upon my readers that as soon as an old bird looks ill after it has been sitting past the ordinary period, he must at once clear the crop in the way I have described above. K. P.

Keeping Chicks Free From Lice.

If the hen and nest were kept free from lice, the chicks should need no treatment for several days. They may not need it then, but for an inexperienced grower it is always better to keep on the safe side and prevent lice getting established, for when they become numerous they do a great deal of damage in a very short time. Dust them with an insecticide within two or three days after taking from the nest, then at intervals of a week until they are three weeks old. After that they should not need treatment for lice.

The Rhode Island Poultry Association has fixed December 4-8, 1906, for their show dates, if Providence continues to exist.

CHICKEN CROQUETTES.

Odds and Ends Left Over From Sunday Dinner.

The bone cutter is becoming more and more of a necessity.

Don't let your subscription run out, but if it does, renew it promptly.

Pigeons kept for squab raising should not be allowed to fly at liberty.

Trap nests have come to stay. They have been tested and their value demonstrated.

Where one fails another succeeds, but out of the same soil wheat and tares are produced.

Send us the photograph of your best bird or birds, and they will be published when we have space.

There is a steady improvement in quality going on in poultry raising in every section of the country.

Clover is the best to seed down a poultry run in an orchard. For a permanent use blue grass and white clover.

The enormous shipment of eggs to New York City does not verify the report that the laying proclivity is being bred out of the poultry of the country.

The White Plymouth Rocks are an exceptionally vigorous bird as proven by the ease with which they can be bred to weights above the standard.

Have a good stock of stationery printed. Issue a catalogue which answers the inquirer's question. Write The American Fancier about specialties in this line.

"Everything going out and nothing coming in," does not make the plant pay. The owner of the non-paying poultry plant usually places too much faith in a greenhorn's skill.

Mistakes will happen. Sometimes we make them. We are always ready to rectify them and shall be pleased to have our attention called to any errors into which we may have fallen.

Resolve to try harder next show season, if you didn't win out during the season past. Don't get downhearted and join the Chronic Kicking Klub, just because your birds didn't turn the trick.

The most valuable egg in the world to-day is that of the great auk. The record price for an auk's egg is \$1,500. There are but eighty of these eggs in existence. Therefore auk fanciers do not guarantee hatchings.

A boy's conception of how to make the hens fill the egg basket can hardly be improved upon. Said he: "I make my hens scratch so hard for grub that they are glad to get on the nest and lay an egg so that they may rest a while."

Opportunity means "being on the spot when the ship of success reaches port, and standing ready to insist upon taking a hand in the unloading" for a share of the cargo. This definition applies to the poultry business as well as to any other industry.

Readers of The American Fancier should remember that the Department of Agriculture of the State of New York publish in pamphlet form a list of occupied and unoccupied farms for sale in the Empire State. The copy we have makes it appear that there are some good bargains to be picked up throughout the length and breadth of the State.

Goose and Gander Gossip.

Ten geese will consume as much grass as a cow.

The gander is a gallant protector.

It is hard to glut the goose market.

Geese, like turkeys, cannot be yarded.

The Jews buy only live geese.

A goose is said to be the cleanest fowl alive.

A goose is very particular about the condition of her food.

The call of the gander is loud, long and shrill, while that of the goose is merely an answer to it.

Geese are naturally long lived, but many a death comes prematurely in the big family.

Current Market Reports.

Beginning with the next issue of The American Fancier a column or so will be devoted to the egg and poultry market in New York and neighboring cities.

The hen may not be a mortgage lifter, but give the hen a chance and she'll scratch one badly.

COLUMBIAN WYANDOTTES.

There is a "happy medium" in all things, and the nearer we keep to the ideal in the daily course of our life, the happier will be our frame of mind.

It seems to be an unerring law of nature that one extreme follows another, and extreme changes are uncomfortable and unhealthy. If there is any one breed in the long list of Standard bred fowls that deserves the name of the "happy medium" fowl I would give it to the latest innovation to the Standard, namely, the Columbian Wyandottes.

When the amateur has to select one breed from the hundred that he has recommended to him by as many different fanciers as all being the best, he has many points to think over before deciding for himself. There has never been a fowl with more aristocratic appearance than the Light Brahma, and while the Columbians have their beautiful markings, still they have no feathers on their legs, which many object to, and a much more practical size. If there could be a vote taken as to the most popular shaped fowl on the list, there would be no doubt but what the Wyandotte type would win easily, with their plump bodies, wide breasts, and solid thighs, together with the graceful curves of the well-bred specimens.

The Columbian Wyandottes can be said to be a combination of the good qualities of these two breeds with the objectionable ones left out, making a combination that can hardly be improved upon. The usual expression of visitors when I show them my flock of Columbians for the first time is that they were struck on the breed from the first time they ever saw the picture of them. While they are very popular from the fancy element, still they are a very practical fowl, as they are just the right size and shape to make a fine table fowl, and their plumage being nearly white does not have the objectionable pin feathers, which together with their yellow legs and shins makes an attractive fowl in the market.

They lay a large brown egg and like all new crosses make good layers and mothers.

Their rose combs are in their favor for cold climates and their plumage which is mostly white, tipped off with black, makes a color that does not show soil near as bad as pure white, as the black makes up the parts that generally gets soiled the quickest, so, that everything considered, they are as I claim, the "happy medium" fowl for the fancy and utility breeder. The present supply of Columbians in the country can not half supply the demand for fowls and eggs for the coming year which accounts for the very high prices that are being asked for both fowls and eggs that are really what they should be. They have had a very steady, healthy boom up to the time they were admitted to the Standard but now that they are an established breed on an equal footing with all others you can expect to see them fast become one of the leading classes in the show room and occupy a place on a footing with any of the older breeds.

E. T. DeGRAFF.

The rogues and rascals in the fancy are growing beautifully less, and the ignorant and careless are now in the great minority.

Wiseacres Poultry Farm

The Wiseacres Poultry Farm is situated about four miles from Croton-on-Hudson, Westchester County, N. Y., and is some fifty acres in extent, entirely devoted to poultry raising. I have now been breeding Salmon Favorolles for about three years from the best obtainable stock, imported direct from prominent English breeders, and during that time, closely comparing them with the main flock of

Since early in 1905 I have used The Practical Trap Nests in all the pens on this plant and have the egg records of every hen on the place. The Faverolles have beaten the Wyandottes in average egg yield by about fifteen per cent., and I have hens that will easily reach the 200 egg mark before the end of the twelve months.

Although I believe Faverolles to be a better all round breed, the Wyandottes

Pen No. 2A Pullet Breeding Mating

White Wyandottes, which hitherto I have considered one of the best general purpose breeds in existence. I have now changed my opinion in favor of the Faverolles, and this change is based on actual results, not on conjecture. I am managing this Poultry Business for profit, not for pleasure; although I confess to taking a great deal of pleasure in it. My principal aim is market poultry; that is to say, the raising and supplying of Eggs, Broilers, Roasters, etc., and I want the breed of chicken that will best answer the purpose, and which will be a good foundation for further improving these qualities. I can see nothing, physiologically, to prevent the breeding of a type of domestic fowl which will combine in itself the maximum of egg laying and table qualities. It is merely a question of judicious selection and careful breeding. The Salmon Faverolles are a result of this selection and care by French and English breeders, and it has so far been my experience that they have succeeded in producing something very near the goal aimed at. There is no variety on earth that cannot be further improved and it is my intention in breeding the Wiseacres Faverolles to constantly keep the general utility qualities in view. Not to breed only from the best layers, not to select only the best shaped and heaviest flesh birds, or the early maturing ones, or those best answering to the standard description of the breed, but to select those only which answer best to all of these requirements.

Wyandottes are deservedly popular, and if one has a good laying strain, are hard to beat for the market poultryman. I am endeavoring to still further improve the good qualities of this breed, and by the use of the Trap Nests, am able to select the best layers, and best birds to breed from, at the same time keeping the standard requirements strictly in view—and no matter how good a layer—no bird is bred from one that would be disqualified. The several breeding pens are headed by pure white, well shaped birds, with good Wyandotte combs, bright red eyes and yellow legs, all sons of heavy layers. The females are selected birds with heavy egg records, or pullets from such hens, and a large proportion of their get should prove to be 200 eggs a year layers.

M. J. WHITTY,
Manager.

Ostrich Plucking Season On.

The regular plucking season is on at the ostrich farm, at Jacksonville, Florida. This is bright information, for the season of Easter bonnets is near at hand. It requires three men to drive, corral and catch the birds, and two to hold them in their places while the feathers are secured. The general opinion that these feathers are pulled from the body is incorrect, as short, stout cutters are used and all of four inches of the stem is left in the body of the bird, which afterwards dries and drops from its socket. These feathers are eagerly sought for in the markets, but the Florida ostrich farm makes up its own produce.

UNSOLVED PROBLEMS IN POULTRY CULTURE.

Often times a beginner in poultry breeding is thoroughly confused at the outset by the diversity of opinion among equally eminent authorities.

For instance, one writer will tell us that the sire governs the color, shape and superficial characteristics, and the dam controls the size and egg producing qualities, while another writer will say that the dam instead of the sire, controls the shape and largely influences the color. Either of these statements may be true in certain instances, and it would seem that certain observers had too hastily arrived at conclusions from perhaps the result of one or two experiments.

In formulating the general laws of breeding the breeder should keep constantly in mind that different conditions produce many exceptions to the general laws.

Then as to the subject of inbreeding or line breeding there is as much or even more decided diversity of opinion. Many of the oldest breeders declare that strict line breeding may be practiced indefinitely with impunity, so long as we use care in each mating to breed only from specimens in perfect health and possessing strong constitutions. A recent writer in the poultry press says that he has strictly line-bred for twenty years and results are so good that he regrets not having practiced it for many years previous. On the other hand others who are supposed to have had equally as much experience, say that a few years of such breeding will ruin the strongest flock, both as to size, health and egg producing qualities.

It is a fact, however, that line breeding gives great prepotency, and that is certainly the quality we are looking for in our breeders.

In the past year or so we have seen the question raised as to the applicability to poultry of the Mendel law and it is believed that researches in this line will open to us vast possibilities in poultry breeding.

We read many articles relating to the laws of Atavism and Reversion but, in fact, how little we know of them at the present time. We see stated that the sire and dam have one half the controlling influence, the grandsire and granddam one-quarter and previous ancestors the remaining quarter. But how abruptly this conflicts with certain facts, let us take for instance, certain strains of Golden Sebright Bantams that we know have been standard bred for at least five or six generations, especially in reference to the rose comb. Out of a large number of chicks fully fifty per cent will have single combs in some instances.

But one might say that as the combs are so narrow that the reversion is natural. But in breeding the Silver Sebrights a single-combed chick is rarely produced, and the combs are of the same type as those of the Golden's.

There is certainly a vast field of research for breeders who can and are willing to give much of their time and money to definitely solve these and other problems in poultry culture. This will be largely the work of fanciers to whom it will be a pleasure and source of gratification to add something to our knowledge.

H. L. MOODY.

WEED'S WANDERINGS.

The Poultry Industry in the Berkshires
Editor of The American Fancier:

I will cease from my wanderings sufficiently long to jot down a few meanderings of the mind rather than the body.

I do not think that there is a greater hot bed for the poultry industry in the United States than right here in Berkshire County, Mass., where five Poultry Shows were held last winter, and all successfully in so far as paying was concerned.

First came Adams with a small and not too successful a show. Then Lenox with their 12th or 13th annual, then Dalton; seemingly to show just what could be done on a pinch, North Adams and Pittsfield. Each held a show on the same dates, and while a few regretted things should be so, it proved the salvation of both, for each had full more than they could handle successfully. And, in spite of the foregoing facts, in Lee, (another town in the same county) a few nights ago there was formed another society with some sixty-five signers, and with that well-known fancier, Charles Shaylor for President; the gentleman farmer R. De P. Titus, First Vice-President; H. E. Heebner, one of the leading business men of the town, Secretary, with American Dominiques, William Shaylor for his assistant and Alex. Faxon, one of our bank officials, for Treasurer; R. M. Dowd, a breeder, who counts his well-won premiums by the hundreds, as Chairman of the Executive Committee, to say nothing of P. J. Lyon or E. F. Strong, lesser officials, certainly warrants Lee in thinking that a successful poultry show is a foregone conclusion.

And all this interest in poultry and poultry culture simply means that the people are waking up to their needs; and that more and better poultry is needed can easily be ascertained by reading the market reports.

We also find in our travels that the unnameable and mixed up flocks throughout the country are gradually giving way to pure breeds.

GEORGE W. WEED,
Subscription and Advertising Representative.

NEW YORK MARKET REPORT.

EGGS—Receipts for Monday, March 12th, 12,453 cases. There seemed to be no abatement in demand for fresh eggs. Large lines were sold at a ruling price of 14½c for immediate delivery. Fresh eggs were so cheap that dealers were not inclined to buy old stock unless prices were very low. We quote: State and other nearby fresh selected white, 20c, 21c per doz. Western, fresh gathered firsts, 14½c; Kentucky firsts, 14½c; Tennessee firsts, 14½c. Duck eggs, 32c.

DRESSED POULTRY—Receipts for Monday, March 12th, 1,603 packages. Philadelphia chickens, 25c; Western fancy, 18c, 20c; ducklings, 20c; Western ducks, 15c; turkeys, 20c; squabs, per doz., \$3.50.

LIVE POULTRY—Receipts for Monday, March 12th, 15 cars. Advices of arrival for week were conflicting, but it was conceded that they would be light. The tone was firm on weighing stock.

There are honest and dishonest advertisers, but the last mentioned don't stand a show in The American Fancier.

High-Grade Flower Seeds.

20 Packages 10c FOR

KINDS.	KINDS.	KINDS.

PIT GAMES AS PRACTICAL FOWLS

The American Pit Game is one of the most useful and beautiful fowls in existence. Indeed, anybody who admires beautiful plumage and graceful carriage will dote on the game fowl. In egg production they are excelled only by the Leghorn and Minorcas. When we come down to the meat standpoint, it is universally acknowledged that the game bird is the best of domestic fowls. It is true that size is generally an objection and that the pugnacious disposition of the bird is a drawback, but this last fault can be eliminated through different methods.

I have raised a great many varieties of fowls, but I admire the Pit Game more than any other. The low-combs on the hens and pullets, makes freezing in winter impossible, and the activity of the birds always keep them warm and comfortable. These features make them excellent winter layers. As mothers they cannot be discounted, taking care of their young as no other domestic fowl can do. Woe to the rat, cat or hawk that disturbs the brood.

Like scores of other fanciers, I do not fight my birds, and admire them solely for their good qualities as above stated. If fanciers will get over the idea that Games will only cause them trouble, more Pit Games will be bred and appreciated.

"HUTCH."

SHOW AWARDS NEXT WEEK.

The American Fancier will, next week, print the awards at the shows recently held in Schenectady, Albany, Chicago, Auburn, Rochester, Bradford, Pa., Painsville, O., Cincinnati, O., Mitchell, S. D., Charlotte, N. C., Littitz, Pa., and Wyomissing, Pa. Five thousand extra copies of the issue of Saturday, March 24th, will be printed, so advertisers should bear this in mind.

A CORRECTION.

A. J. Cooper, of Duryea, Pa., writes that an error appeared in the issue of The American Fancier, of March 3d. In the list of awards at the Scranton Show Mr. Cooper should have been credited with winning pen 1 Barred Plymouth Rocks.

A Weekly Journal Devoted to Standardbred Stock.

THE AMERICAN FANCIER PRINTING AND PUBLISHING COMPANY.

Havemeyer Building, 26 Cortlandt Street.

New York City.

Our old friend W. E. Samson, of Forest City, Pa., who for the past year has been disconsolate because he could not breed any Silver Wyandottes, has succeeded in again taking up his favorites and mated up several fine pens, selected from his old original strain, one of the finest in the country, secured his new yards and will be in the Silver Wyandotte fancy to stay. We have known Mr. Samson many years and respect him as a fine fancier and through gentleman. He is a credit to any profession and nearly all of his Silver Wyandotte friends, and they are numerous, will say what we expressed above.

The fellows that tried to corner the egg market last fall by loading up all the available cold storage plants with hen fruit bought at fairly low prices, have been hard hit. The mild winter made the lay of the hen quite pronounced and impressive and the consequence was, the frapped eggs became a drug on the market and sold for less than they were bought for in most instances. If that wise aggregation of law makers at Albany would make a few laws that would stop the cornering of eggs by the beef and other trusts and insist on fresh eggs being sold and stamped as such under penalty of a big fine if otherwise, there might be some kind words said

ADVERTISING.

The advertising rate in The American Fancier is fifty cents per inch for each insertion. Five per cent. discount for payment in advance for six months insertions, and ten per cent. for payment in advance for one year's insertion.

CLASSIFIED AD RATES.

Forty-two words or less one time fifty cents; three times, \$1.00; thirteen times, \$4.00; twenty-six times, \$6.00; fifty-two times, \$12.00. Additional words at the rate of two cents each for one insertion, or one cent each for each insertion when run thirteen times. PAYABLE IN ADVANCE.

about our solons in the legislature of the Empire State. It is true that the microbe of graft is not dead in the Capital City; but a real fresh egg should be rendered proof against any kind of graft, especially when it is known that some of our most famous politicians in the State have a weakness for milk punch with an egg in it or a golden fizz and sundry other decoctions that require eggs that must be as fresh as the morning dew. The fellow that sells cold storage eggs as "fresh laid" is not as scarce as the public imagines. We have met several of that ilk and it is a pity that no law can reach such crooks and punish them as they deserve to be.

There is a big demand for young Guineas after the game season closes. They occupy a prominent place on the bill of fare of many of the best restaurants in New York City. Like the Muscovy Duck they appeal to the taste of the epicure. Properly cooked they have that gamey flavor so pleasant to the palate and satisfying to the inner man.

Speaking of Muscovy Ducks, we saw a splendid collection of the latter at H. M. Carpenter's fine place at Ossining, N. Y., recently. Mr. Carpenter has bred them for many years, and won many blue ribbons with them at Madison Square, New York. He keeps them principally for use on the table and one of Harry Moral Carpenter's Muscovy duck roasts is something never to be forgotten. If anything, it beats his fish dinners, and they are in broadcloth alley every time.

The following associations have extended invitations for the holding of the next annual meeting of the American Poultry Association: Auburn, N. Y., January 7 to 12, 1907; New York City (Madison Square) January 1 to 5, 1907, and Fort Wayne, Indiana, January 21 to 26, 1907. The vote by

mail is now in progress and will close on Monday, April 2, 1906. With due respect for the claims of Auburn and Fort Wayne, we sincerely hope that the members of the Executive Committee will consider the metropolis of the United States as the best choice for the coming meeting. It will result, if New York is chosen, in the greatest, largest and most beneficial gathering of members and fanciers ever assembled in one building. Mr. Crawford, the Secretary has sent out a very businesslike invitation and statement regarding the importance of a meeting held in connection with the most successful poultry show in America. The time is at hand for just such a gathering and a thorough reorganization of the old society. And little old New York is a very good place to start a rejuvenated society on the right road to usefulness. Besides the big army of loyal members in the East are entitled to recognition, especially the New England contingent, who have had a rather raw deal of late on A. P. A. matters.

The annual membership should be abolished or so radically changed as to avoid some of the queer and nasty political scheming that has ruled in the past. The American Poultry Association can hardly be classed as commercial institutions where graft and favors rule for the benefit of officials. Its purpose is of a higher and better order, and with men of integrity and true fancier's spirit in charge, there is no reason why it should not be a model organization, not surpassed by any other live stock organization in the United States.

Dr. William Conner Cleckley, Augusta, Georgia, has had quite an experience importing birds from England. He sends a photograph of a bird that was represented to him as one of Ainscough's best Black Red stags in England, and states there is no doubt in his mind that the game bantam was stolen and a mongrel put in his place. The picture of the bird represents something like an old English Game Bantam and not a very good specimen at that. Here is what Dr. Cleckley writes regarding the transaction.

"The first of this year, I imported two Black Red Game Bantams from England, through Mr. John Wharton, of Honeycote, Hawes, Yorkshire, England. He offered to send me a pair of the 'best possible quality' for a fair price, and after I sent the money by cablegram, being so anxious to get the birds over for our show, early in January. I was the first man to send a money cablegram from our city, and it was for Black Red Bantams. Now, here comes my tale of woe. After twenty days on the way they arrived, and imagine the shock I got when I found, instead of a fine specimen of "up-to-date" game bantam, a mongrel of low degree met my eyes. A photograph of this "Rooster" I enclose for you to see. I was to get one of Ainscough's best blood. Now I wish to state, I do not believe Mr. Wharton sent this mongrel over. The bird he sent was stolen and the thief substituted this one in its place. The pullet was a good game bantam, and Mr. Wharton says the cockerel was the best Black Red he had ever seen. Now what are we to do in such a case? It

is crushing to an enthusiastic fancier to be treated in this way. But what are we to do, the Express Company charge us double rates, but give nothing, they have it all their own way."

This is not only a serious, but very difficult case to handle. It is an outrage to defraud the doctor of what he bought and a grave injustice to the fancier of Mr. Wharton's good reputation. There should be some redress in matters of this kind, and we trust that no efforts will be spared to find the culprit who substituted the mongrel for the bird ordered and shipped. As to getting anything out of Express Companies, one might as well try to get blood out of a turnip, in cases of this kind.

The advocates of simple mating will find much to comfort them in the following remarks by a new Jack Faithful in a recent number of Poultry and Pigeons, England:

"I notice in your columns last week remark by the Rev. J. N. Williams about the desirability of breeding Pile Game Bantams from one pen only. Now, have a good many friends who have, at some time, been thinking over the matter of dual breeding, and asking each other whether, with any of our breeds, it is desirable thing, to so fix the standard merit that the exhibition cockerel or pullet cannot be bred from the same pen. In Nature, the hen necessary to produce the plumage of the cock in her of spring is considered of the standard exhibition colour too, as is seen in our birds, exhibited. Again, take the case of the golden pheasant. The hen is not all unlike a golden pencilled Hamburg pullet in her ground colour and her love markings. Yet, she will produce the brilliant gaudy colours of gold, orange etc., of the male. It may be said that of breeds are made, and not natural, the standards are not natural, but arbitrary. But if so, and undoubtedly it is so, why we have the power to fix standards, why do we not fix them so that the exhibition cock and hen can both be bred from one pen? No sensible argument can be adduced why we do not. But there are many in favour of our doing so. Our birds become more valuable. We can breed a greater number of like winners on the same ground. We have not the trouble of keeping the strains together. No bother over markings, etc. No accidents from the wrong male getting to the harem. Not so many cocks to keep. Not so much danger of them fighting and spoiling themselves. In fact, we may say that, in our opinion the sooner the dual system is abolished and the better. It would be a blessing we never heard of it again."

When "Doctor Ben" Thornton, the Hon. John Filkin, Judge C. W. Hoit, Senator A. F. Peirce, Mine Ho "Billy" Hammall and several other Red Pyle Game Bantam experts read the above they will "smile a smile a mile long." Ferdinand Bantam Zimmer, the Sage of Bantamdom, is writing a few essays on single and double mating which will appear shortly in The American Fancier. In our own experience, fixed markings in both male and female Red Pyles, no matter what variety, are not to be obtained by breeding standard colored birds together, in fact, such extreme mating as using a Black Red male with washed-out Pyle females is resorted to with regular frequency, not generally known. It is a well known fact that black red chicks with yellow legs are often hatched from Red Pyle Game Bantam eggs, and amateurs are apt to condemn the seller of such, and believe the blood of the stock to be impure. It is another fact that many of the finest stationed and typical Pyle Bantam females run almost white in color but a faint lemon lacing on the hackles distinguishes them from the pure white games. They are in reality White Pyles, a variety long since discarded. The infusion of this strong

Black Red blood is, or seems to be, the only means of maintaining the desired standard markings. Perhaps the Standard is wrong in demanding such, but the Red Pyle Game fancier, "the boys that pay the freight," want such birds and with them the end justifies the means.

* * *

In this issue we have begun the publication of show and fair dates. In this particular, we ask each secretary to see that his show is correctly announced. If we have it wrong, kindly let us know. If we still have it wrong let us know again.

* * *

While The American Fancier wants to thank its legion of friends, there is one feature that we want to call particular attention to. That is, that you make the responsibility upon yourself if you do not do business with regularly appointed representatives of The American Fancier. They will show credentials in every instance. This caution is printed simply because some parties have been "doing" some of our good-natured patrons.

* * *

The American Fancier has received a brochure from the Hawaii Promotion Committee representing the Territory of Hawaii, dated at Honolulu, February 15, describing the "Agricultural Possibilities of Hawaii," by Mr. Jared G. Smith, Special Agent in charge of the United States Hawaii Experiment Station. Our possessions are the Paradise of the Pacific, as may be gathered from the fact that sugar, pineapples, sisal, bananas, coffee, tobacco, vanilla, dairying, poultry, silk, vegetables, fruits, bees, stock raising and rubber constitutes the attractions that appeal to the home-seekers and those who are seeking investments.

* * *

Joseph L. Shull, of Johnstown, N. Y., has been commissioned as subscription and advertising representative of The American Fancier, and will do the territory from Albany to Buffalo, and the territory tributary thereto. Mr. Shull is a thorough fancier and can pick the good birds from the poor ones every time. In the recent Madison Square Show our representative won several prizes with his Partridge Wyandottes.

Injury to Eggs by Transportation

Interesting Article by a Standard Authority.

Mr. Henry Stewart, a number of years ago did much practical writing for the agricultural papers, and in looking over our files we find the following article published in the Rural New Yorker on a subject that is of timely interest:

An egg is not simply a mass of yolk surrounded by a layer of albumen and inclosed in a shell, but consists of a vitalized germ imbedded in a mass of yellow yolk composed of several layers and surrounded by a tough membrane, known as the vitelline membrane, which is shown in the accompanying outline, the yolk at 1

and the inclosing membrane at 2. This yolk is the fertile part of the egg and is developed in the ovary. As it descends the oviduct, it becomes inclosed in a thick layer of albumen, consisting of three distinct films, each of a different density (2, 3 and 4 in the figure), and these are deposited around the yolk at three different periods during its descent along the oviduct. This albuminous covering is inclosed in a double lining membrane of a tough, fibrous character, which is the covering of those imperfect eggs known as soft-shelled eggs, and which are without any solid shell. Immediately over this and attached to it, is the outer shell, which consists chiefly of carbonate of lime. This outer shell consists of several layers of fibrous tissue woven together, and its opacity is due to air contained in the meshes of the interlaced fibers. It is porous and admits the passage of air freely through the tissue. At 6 is shown a spiral albuminous ligament attached to the vitelline membrane on each side, and also to the testaceous membrane or the fibrous inner covering of the egg. This membrane is drawn down at the obtuse end of the egg, forming a space (7) between it and the shell, which is known as the air-space, and this forms an elastic cushion for the support of the yolk while the spiral ligaments called the chalazae, act as a spring to protect the yolk against injury and support it as it floats in the albuminous layers. The cicatricula, a yellowish-white disc, seen in the surface of the yolk of a fertilized egg and shown at 8, contains the germinal vesicle and is connected by a canal with the center of the yolk, which is formed of white globules, while the rest of the yolk is made up of yellow granulations, designated vitelline globules.

Such being the character of an egg, it is seen to be made up of the most fragile materials, inclosed in a comparatively strong protecting shell and supported by springs from the jars to which it may be naturally subjected

by the movements it may undergo in the nest during incubation. But nature has made no provision for artificial conditions, as transportation by railroads and wagons, and the jars and jolts which occur in such transportation, and as the interior of the egg is balanced in a very delicate manner only to meet natural conditions, it is by no means prepared for those unnatural ones to which it is subjected when eggs are carried hundreds or thousands of miles over railroads in freight cars which are jostled and jarred and bumped forcibly in transit; consequently it is very easy to destroy the vitality of an egg by shaking it, and I have met farmers who, when forced to dispose of the eggs of costly pure-bred fowls to the stores, killed them by holding them in the hand and jarring it smartly on the palm of the other one. Such a jar would evidently rupture the spiral ligaments and set the yolk free, or possibly rupture the delicate covering membrane of the yolk, or disturb its several layers and displace the attachment of the germinal vesicle, which is the seat of the vitality of the egg.

Water transportation is the safest for carrying eggs, as it is free from the solid shocks which occur when freight cars are bumped together or jolted over the uneven rails. But it is not difficult to arrange a box supported by springs or elastic cushions for carrying valuable eggs to be used for hatching. I devised one some years ago in this way:—a small box was used for packing the eggs, which were wrapped in paper and packed in dry sphagnum moss. This box was then fastened to an inner box by the strongest rubber bands made, so that it was suspended freely in the center. The space was filled in loosely with the dry moss, and a leather strap handle was nailed to the box to serve as a handle for lifting it to insure as far as possible its being kept right side up. Eggs sent in this way traveled 1,500 miles by steamer and railroad without any damage.

The facts above given I think go to show that eggs are and must be quite frequently injured for incubation by the shocks met with in transportation, and it is to this injury that disappointment in hatching is due. I cannot conceive how an egg that has been so roughly treated as to have the contents so delicately constructed all mixed up, can be reconstructed by a few days' rest any more than a person who has been mashed to a jelly in a railroad collision could settle back to his proper condition by being put into a soft easy bed in a hospital for a few days. Such shaking up and mixing would be fatal to the egg and must be avoided by preventing any possible injury during transportation. No doubt some of the gentlemen in the experiment stations are sufficiently well versed in this branch of anatomy to be able to detect the cause of failure to hatch, and if it be due to defect of vitality or to injury. An egg boiled hard will exhibit all the various peculiarities of structure on

dissection, and if it has been mixed up the injury will be plainly apparent. I believe, however, that the fault is mostly due to want of vitality in the egg, and that this is caused by the manner in which fancy poultry is kept, cooped in yards, for instance, and generally overfed and having too little exercise, and, possibly, sometimes too closely bred; but no doubt some of it is due to rough treatment during transportation.

DATES CLAIMED.

Under this heading there will appear each week a list of all the shows claiming dates for the coming season. Secretaries of poultry, pigeon and pet stock exhibitions will confer a favor by sending in the dates selected as promptly as possible. It is not only a convenience and guide to secretaries of shows that have not selected their dates, but of great interest to readers of The American Fancier, a majority of whom are exhibitors.

The name of secretary and judges will be appreciated when sending in notices.

Aug. 21-24—Cortlandt, N. Y. Cortlandt County Agricultural Society, W. J. Greenman, Secretary.
Nov. 12-17—Houston, Tex., Hewey S. Fox, Jr., Secretary.
Dec. 4-8—Youngstown, O., H. J. Cossler, Secretary.
Dec. 4-8—Wilkes Barre, Pa., David T. Miller, Secretary.
Dec. 6-9—Danbury, Conn., C. H. Brundage, Secretary.
Jan. 15-19, 1907—Kansas City, Mo., P. H. DePree, Secretary.
Jan. 15-19—Angola, Ind., Tri-State P. and P. S. Association, W. K. Sheffer, Secretary.
Jan. 30-Feb. 2—St. Albans, Vt., C. O. Barrett, Secretary.
Dec. 4-8—Providence, R. I., Rhode Island Poultry Association, W. I. Brown, Secretary, 6 Exchange Place.
Dec. 12-15—Corsicana, Tex., W. E. Elliott, Secretary, Box 281.
Dec. 12-14—Kingston, N. Y., F. E. Miller, Secretary, Rifton, N. Y.

BRISK BUSINESS BRIEFS.

Superintendent J. Robert Livingston, of the Biltmore Poultry Yards, Biltmore, N. C., writes The American Fancier that men in the know from little old New York are at the yards on the Biltmore possessions testing out machine gas for use in operating the incubators and brooders. Editor Drevenstedt will tell something in this line in his observations in "From the Editor's Perch."

The latest suggestion for a Jacobin Pigeon Standard is: Hood, 24; chain, 16; mane, 16; head and beak, 4; eye, 2; carriage, 15; markings, 10; color, 9; shape of body, 2; legs and feet, 2.

The following are the recently-elected officers of the Working Homer Pigeon Club: President, E. P. Washburn; Vice-Presidents, J. A. Riley, A. Lloyd; Secretary-Treasurer, W. A. Hersey; Executive Committee, Messrs. Lockwood, Davenport and Horsman.

The recently-elected officers of the American Owl Club are as follows: President, C. K. Mervine; Vice-President, Thomas Scholes; Secretary-Treasurer, A. D. Robinson; Executive Committee, Messrs. Mervine, Scholes, Meyer, Irving and Robinson.

IMPORTANT NOTICE!

Patrons should bear in mind that all accounts previous to March 1, 1906, are due to the Howard Publishing Co., No. 714 Twelfth Street, N. W., Washington, D. C. All accounts after that date are due to The American Fancier Printing and Publishing Co., Havemeyer Building, No. 26 Cortlandt Street, New York City.

The Title Page.

The half-tone on the title page of this issue is that of the Silver Wyandotte Cockerel, owned and bred by A. T. Beckett, M. D., of Salem, N. J. (not Newark, as the fellow who made up the title page has made it). This bird was first at the Newark Show, and Mr. J. H. Drevenstedt pronounced it to be the finest of its species produced during the season past. The Doctor is a fancier of long standing, and of the best reputation in poultrydom. His birds are known from the Atlantic to the Pacific. Those who enter a bird in the same class with Doctor Beckett's birds know that they have no lead pipe cinch.

The Cortlandt County Agricultural Society will hold its sixty-eighth annual fair August 21-24, 1906.

CLASSIFIED ADS

Notice.—No every other week or once a month contracts for classified advertisements will be accepted. See editorial page for classified ad rates.

PLYMOUTH ROCKS.

BUFF ROCKS EXCLUSIVELY.—WE have mated up for this season's breeding our best birds selected from our Auburn winners, nice, rich, even buff, and will book a few egg orders at \$2.50 per 15. See Fancier for Auburn awards. Stephen Westlake, 17 Union St., Auburn, N. Y. 96-47

BARRED ROCKS.—14 GRAND MATINGS, 7 for cks., 7 for pullets; Madison Square winners in both matings. Birds scored at 1905 show, by leading judges, from 93 1-2 to 95 1-2 for females. Eggs, \$3 straight, per setting. C. H. Shaylor, Lee, Mass. 94-45

BLUE BARRED PLYMOUTH ROCKS, exclusively Bradley Brothers' strain, double matings, prize winners. We aim to please our customers. Eggs from choicest matings, \$3 for 15; \$5 for 30. 60 per cent hatch guaranteed or duplicated at half price. Incubator eggs, \$5 per 100. S. D. York, Deposit, Broome Co., N. Y. 52tf

WHITE PLYMOUTH ROCKS. FISHEL'S are the best in the world, winning more prizes at World's Fair than any other two White Rock Exhibitors. My new 48-page catalogue is the finest poultry catalogue ever issued. Send three 2-cent stamps for a copy. 5,000 birds to sell. Address U. R. Fishel, Box D, Hope, Ind. 532tf

BUFF PLYMOUTH ROCKS.—THREE pens headed by three grand males. Winners of 15 firsts, 6 seconds, 3 thirds and 11 specials. You are sure to get winners from these matings. Eggs, \$2. A. E. Raymond, Erie, Pa. 80-tf

EDDY'S BUFF ROCKS EXCLUSIVELY.—I have three hundred breeders mated for best results. Extra good layers. Eggs, special mating, three dollars per thirteen; regular \$2 layers, \$1. Discount on large orders. The Poplars, D. B. Eddy, Prop., Somerset, Mass. 94-tf

RIDGELY'S BARRED PLYMOUTH ROCKS, won at Herald Square and Madison Square. Birds and Eggs for sale; eggs, \$3 per 13. Joseph Phipps, Mgr., Towson, Md. 01-52

WORLD'S FAIR WINNERS.—COCKS, Cockerels, Pullets, for sale. Clean sweep wherever shown. Six first prizes at Poughkeepsie; more prizes New York State Fair, 1904-05, than twenty competitors combined. Cockerels, three dollars up; pullets, two. Edgewood Farm, Ballston Lake, N. Y. 588-tf

400 BARRED P. ROCKS. BRADLEY Bros. strain; pure fine stock. Write for prices and show-room record. Blue Barred Farm, Box 40, Chagewater, N. J. F. H. Castner, Prop. 527-tf

BUFF ROCKS.—WINNINGS AT MADISON Square Garden, New York, January 2-6, 1906, 1st and 2d pens and 3d pullet. At Hagerstown, Md., Oct. 13-16, 1905, 1st and 2d pens, 1st cock, 1st and 3d hens, 1st and 2d cockerels, 4th pullet. Eggs for sale from best selected pens, \$3 per 13. George Fox, Torresdale, Phila., Pa. 638-47

WHITE ROCKS. WINNERS OF WHITE Rock Silver Cup at Lititz, Dec. 05. Eggs from prize matings, \$3 and \$1.50 per 15. J. D. Koons, Northampton, Pa. 35-86

SILVER PENCILED AND PARTRIDGE Plymouth Rocks for sale. Eggs for setting, \$2.00 per 13. Poultry farm for sale. Chas. P. Pond, Camden, N. Y. 641-643

BUFF ROCKS EXCLUSIVELY. MATED for the best results; headed by even Buff cockerels, sired by 1st prize cockerel. Madison Square, 1905. Winners of 19 prizes, 7 Specials, on 19 entries this season. Eggs, \$2 per 15. Geo. W. Hatt, Mohn's Store, Pa. 641-646

KERLIN'S BUFF ROCKS ARE GREAT layers and prize winners. They have size and shape, are solid Buff. Winners at Boston and Scranton, 1906; Herald Square, N. Y., and Harrisburg, 1904-5. Eggs, \$1.00 per 13; \$6.00 per 100. Mrs. Bertha M. Kerlin, Box 20, Douglassville, Pa. 642-647

BOUCK'S BARRED ROCKS WON 55 regular and 35 special prizes this season. Best eggs, \$3.00 per 15; \$5.00 per 30. Incubator eggs, \$5.00 per 100. Arthur G. Bouck, Frankfort, N. Y. 52tf

FAIRFIELD STRAIN OF WHITE Rocks.—Sure winners. During the past winter shows, won at three shows: fourteen firsts, also Ivory Soap Special for best white bird in show. Eggs, \$2.00 per 15. Larger lots, a matter of correspondence. Write for catalogue. Fairfield Poultry Farm, H. W. Schnitzer, Prop., Fairton, N. J. 642-644

BARRED ROCK EGGS FOR HATCHING, Bradley Bros. Strain, \$2.00 per 15; \$10.00 per hundred. The remembrance of quality remains long after price is forgotten. I. W. Jenkins, 416 Stuart Ave., Syracuse, N. Y. 640-52

STEP LIVELY, AND GET IN LINE for some of Ladnarc Farm's winning Barred Rocks. If you don't need any stock, perhaps a setting or two of eggs would give you the start you have needed. Cockerel and pullet bred male for disposal. Mating circular on application. Ladnarc Farm, L. S. Crandell, 12 Steuben Park, Utica, New York. 642-645

BARRED ROCKS.—FAMOUS "RING-let Strain." Will replace every infertile egg. Pens carefully mated. J. L. Wilson, "The Portland Farm," Port Chester, New York. 642-54

WYANDOTTES.

BUFF WYANDOTTES EXCLUSIVELY. Our Buffs again demonstrate their superior quality by winning at Madison Square on 3 entries, 1st pullet, 2 cockerel and 3d hen. At Auburn in competition with the best breeders. State Cup for best display, also 2-3-4 cock, 1 cockerel, 1-3-4 hen, 2-3-5 pullet, 2-4 pen. Write for prices on stock and eggs. J. H. Scott, R. F. D. No. 9, Auburn, N. Y. 00-51

SILVER LACED WYANDOTTES.—A few fine cockerels for disposal. At the great Rochester show, 1905, we won 1st cock, 3d cockerel, 3d hen and 4th pullet; classes all full. Eggs from best matings, \$2 per 13. Write for prices on stock. A. V. Fowler, Brockport, N. Y. 94-45

WHITE WYANDOTTES.—WON 1ST hen, 1st ckl., 1st pul., 1st pen in class of 483 at Madison Square Garden, New York, January, 1905. Eggs, \$3 per 13; \$5 per 26. Seven chicks guaranteed from each setting. Stock sold on approval. Ross C. H. Hallock, 6308 Clifton Ave., St. Louis, Mo. 93-44

COLUMBIAN WYANDOTTES.—MADISON Square Winners. 1 pen, 4 cock, 5 hen, 1905. A few fine cockerels for disposal; also a limited number of eggs at \$3 per setting. Dr. C. J. Andruss, of Blk. Minorca fame. Canandaigua, N. Y. 593-tf

HICKORY GROVE POULTRY FARM, Tionesta, Penn.—Home of some of America's best White Wyandottes; winners wherever shown. Winners at the late Pittsburgh Show. Stock for sale at all times. Eggs in season at \$2.50 per 15. C. J. Killmer. 02-53

IT IS IN THE AIR; THIS WHITE Wyandotte fever, one cannot help catching it. The real worth of the breed, the real beauty as well, appeals to all. You are interested and want to know where to get stock or eggs of the best. Why not try a short cut and come to headquarters the first jump; to the acknowledged leading White Wyandotte Specialist for ten years past. Eggs, \$5.00 a setting; two for \$8.00; three for \$10.00. Two-cent stamp for catalogue. Arthur G. Dunston, 34 High St., So. Framingham, Mass. 600tf

AT THE DANBURY FAIR, 1904, I WON on White Wyandottes, 1st and 2d hen, 1st pullet; on Buff Wyandottes, 1st cock, 2d hen; 5 premiums on 8 entries. Breeding and exhibition stock for sale. C. D. Hatch, Shelton, Conn. 81-tf

MRS. E. TURNER'S WHITE WYANDOTTES are home bred, winners of many regular prizes, including Ivory Soap Cup, Hagerstown; also prizes and specials at World's Fair. No larger or better shaped birds. (Devoid of black feathers). Eggs \$3.00 for 15. Mrs. E. Turner, 606 Wilkins Ave., Extended, Baltimore, Md. 95-46

"AMERICA'S BEST BUFF WYANDOTTES."—Winners at all the leading shows in the United States and Canada. I have about 300 head of stock for sale. There is a reason why you should buy of me. Let me tell you the reason. Andrew Riddell, (formerly of Piser & Riddell), Box 9, Shushan, N. Y. 624-tf

BUFF WYANDOTTES, COCK BIRDS, hens, and a few early hatched cockerels and pullets from my best stock. J. E. Burt, Athol, Mass. 95-46

SILVER PENCILED WYANDOTTES. Some very fine young stock from Sana-toga, Lititz, and Newark winners for sale; also one cock and two hens. L. B. Custer, Parker Ford, Pa. 594-645

WHITE WYANDOTTES (SNOWDRIFT Strain).—We have mated up 25 pens of the short backed, stocky built, deep breasted kind for this season's egg trade. Some choice stock for sale. Write for prices. Picturesque Poultry Farm, Box C, Trenton Junction, N. J. 625-tf

HARRISON L. HAMILTON, BREEDER of choice Buff Wyandottes—farm raised and bred to lay, as well as win at the leading shows. Write me just what you want. Telephone connection. Fairview Farm, Ellington, Conn. 592-644

PARTRIDGE WYANDOTTES.—GRAND exhibition and breeding stock from my Madison Square winners, 1905. Cockerels fit for any competition. T. W. Schofield, 685 No. 7th St., Newark, N. J. 633-645

BUFF WYANDOTTES EXCLUSIVELY. Have won at the following shows: Auburn, Rochester, Lockport, Schenectady and New York State Fair. Young and old stock at reasonable prices. Orders booked for eggs at \$2.00 per 15. Satisfaction guaranteed. Mention Fancier. C. W. Augenstein, 53 Culver Road, Rochester, N. Y. 600-51

25 WHITE WYANDOTTE COCKERELS, Hallock Strain, large white blocky birds. Some winners among them. Also Partridge Wyandottes and S. C. W. Leghorns. Special bargains during January. Ross Huson, Penn Yan, N. Y. 627-tf

SILVER-LACED WYANDOTTES.—35 cockerels and 100 pullets for sale. I have won my share of the ribbons at Trenton, Hagerstown and Portland this fall. Send for circular. H. F. Chase, Box 77, Andover, Mass. 636-53

SOME ELEGANT SILVER WYANDOTTE Cockerels for sale at \$3.00 and up. Remember we always breed our own winners and show them in strongest competition, winners at Madison Square, Chicago, Hagerstown, Rochester, etc. Write Matthias Bros., Tonawanda, N. Y. 634-46

GOLDEN WYANDOTTES.—MADISON Square, 1906. We did it. 1, 3, 4 Cock, 2, 3 Hen, 1, 3 Cockerel, 2, 4 Pullet, 1st Pen. \$100.00 Cup best ck., hen, ckl, pul. in show. All Wyandottes competing. The largest and best class ever there. Single birds or breeding pens. Eggs. Circular. Telephone. Charles H. Brundage, Danbury, Conn. 91-tf

SILVER, GOLDEN, BLACK AND PARTRIDGE Wyandottes. Line-bred New York and Boston winners. Stock and eggs for sale. Circular free. J. M. Lotridge, Cincinnati, N. Y. 637-46

MADISON SQUARE GARDEN WINNERS.—We have won 1st and 2d prizes four successive years at the above show on our White Wyandottes. Eggs, \$3 per 13; \$5 per 26. Incubator eggs, \$5 per 100; \$40 per 1,000. Booklet free. Allen C. Roberts, Parkerford, Pa. 556-tf

BUFF WYANDOTTES EXCLUSIVELY. Madison Square, 1905, 1st Pullet, 2d Cockerel and 3d Hen, and at Auburn, N. Y., the Buff Wyandotte State Cup. 1906, Madison Square, 1st Cockerel and 1st Hen, and again at Auburn, N. Y., the 1906 Club Cup. Stock and Eggs in season. Write for mating list. J. H. Scott, Auburn, N. Y., R. F. D. 9. 600-651

WHITE WYANDOTTES.—MANY prizes won at Schenectady and Albany Shows, 1905. Again at Albany, 1906, in competition with 180, won 1st cock and 3d pullet. Eggs from stay-white stock, \$2 per 15; \$3 per 30. Write. Edward Preisser, 133 Sherman St., Albany, N. Y. 640-645

PARTRIDGE WYANDOTTES.—AT Scranton Show, Jan. 15, 1906. Show second only to New York or Boston, my birds won first and third on cock, first on cockerel, first and third on pullet, also cash special on cock for best Partridge Wyandotte bird in the show. A few sittings from my best prize matings, \$3.00 per 13. W. H. Hagen, Scranton, Pa. 640-647

COLUMBIAN WYANDOTTES FOR Sale. 1 trio, \$7.00; 1 trio, \$15.00; 1 trio, \$10.00. Eggs, \$2.00 per 13; \$5 for 40. Rowland G. Buffington, Somerset, Mass. 640-45

HOWELL'S WHITE WYANDOTTES. Won four 1sts and one 2d and 3d at Specials at Rochester, 1906. Club special for whitest male, 1904. The nests used five years to increase egg production. Eggs for hatching. Wm. Howell, Box H, Geneseo, N. Y. 640-

BUFF WYANDOTTES.—RIDDLE Strain. At Frankfort, N. Y. (80 Buffs Show), on 3 entries won 1st ckl., 4th at 5th pullets, 3 specials. Eggs from be matings, \$2.00 per 15. Stuart Howland, Box 156, Granville, N. Y. 640-6

WHITE WYANDOTTES.—ELEGANT stock; the stay-white kind. At Rochester Show, 1906, on 4 entries won 1st, 2ds and special. Auburn Show, 1906, 7 entries won 4 1sts, one 4th, two 5th and 22 specials, including special whitest bird, special for best exhib White Wyandottes and Grand Sweet stakes Special for best male bird in show. Eggs, \$2.00 per 15. Fred C. Lis Box 47, Romulus, N. Y. 601-

AT BOSTON SHOW, 1906, ON SILVER Wyandottes. We won 1st cock, 1st, and 4th hen, 3d and 4th ckl, 1st. 2d, and 5th pullet. Have won more prizes the past 15 years on Silver, Buff and Black Wyandottes than all others. Egg \$3.00 per 15; \$5.00 per 30. Catalogue Wood & Freeman, Fitchburg, Mass. 91-

COLUMBIAN WYANDOTTES.—WINNERS at Dalton, Lenox and Pittsfield; few choice birds for sale. Eggs, \$3.00 per setting, two for \$5.00. I know I can please you. H. G. Oles, 80 Taylor Street Pittsfield, Mass. 641-6

Dept. 22 Ligonier, Ind.

D. & H. ANNOUNCEMENT

THE D. & H. CORPORATION
J. H. Drevenstedt, President and Treasurer, and R. L. Hutchings, Secretary, will take possession of Columbia Stock Farm, at Red Bank, New Jersey, on April 2nd, 1906.

This finely equipped plant will be run as a practical poultry farm, the production of choice eggs and meat for market being a specialty.

J. Frank Hiller, formerly of Fort Plain, N. Y., will be the poultryman. The plant itself will be under the personal supervision of J. H. Drevenstedt and will be used as an experimental farm for the AMERICAN FANCIER.

The varieties are: American, Buff Plymouth Rocks; Italian, White Leghorns; French, La Fleche. These were selected for their superior excellence as the most profitable producers of their respective races.

The Buff Rocks represent the best blood in America. The White Leghorns, the best and hardest egg laying strain obtainable. The La Fleche, the best selection of Canadian and French birds.

We will state right here that we will advertise no eggs for sale or compete in any way with advertisers in THE AMERICAN FANCIER.

This is purely a business proposition based on carefully prepared lines. It is the intention of the D. & H. corporation to do all it can to help the poultry business in the United States and plans have been made to send teams of representative birds next fall to the great shows of England and Canada, each individual exhibitor showing his birds in his own name. We simply act as agents.

Mr. George H. Burgott, the well known expert judge and fancier, has been engaged to take charge of the exhibits. The scheme is as broad as it is large and it will result in much good to all concerned.

The above is a partial explanation of the D. & H. advertisement in the poultry papers of "The Square Deal" and "Ask Drev."

More later.

Young's Strain S. C. W. Leghorns

I HAVE NO OTHER BREEDS

My strain again for the sixth consecutive year shows its super-
iority by winning more prizes at Madison Square Garden, New
York, in the strongest competition ever known, than all others
combined, including 17 specials, and again winning the National
S. C. W. Leghorn silver cup. Two weeks later I almost duplicated
my wonderful win of last year at Boston by winning 9 prizes on
9 entries against the most prominent breeders of the east. My
winnings for 1906 at the world's two greatest shows are as follows:

BOSTON

Pen—1st.
Pullets—4th.
Hens—1st, 4th.
Cockrels—1st, 2nd.
Cocks—1st, 2nd.

NEW YORK

Pen—4th.

THE AMERICAN FANCIER

A National Magazine Devoted to Standardbred Stock

VOLUME XXV

NEW YORK, MARCH 24, 1906

NO. 643

THE BLONDINETTE

(By James F. King in The Feathered World)

The Blondinette, owing its origin primarily, as will be shown later in these notes, to the Satinette, is perhaps the most popular of the Oriental frilled varieties. Its imposing appearance and carriage, the dark head, with in some of the colors, the body having every feather evenly laced throughout, the needle pointed crest, and full-feathered frill, with grouse-like foot feathers, all tend to its attractiveness, and very seldom is a really good bird seen on view at the exhibitions but it arrests the attention of almost every passer-by, be he fancier or only the casual visitor, and invariably elicits the remark, "What a pretty pigeon." Pretty it is, and beautiful, too; and the wonder is that so few fanciers, comparatively speaking, have as yet devoted their attention to the cultivation and development of such a charming bird.

From an artistic point alone it should attract far greater notice, although there is no doubt that the number of its admirers are gradually increasing. The combination of the various points in a good bird all go to please the eye, structural beauty, as well as evenness of lacing and clearness of ground color, making up the perfect bird, which, alas! has yet to be produced.

The head, which should be round and broad, with a continuous sweep from the tip of the beak right up the peak, is where the principal defect exists, the perfect "sweep" being scarcely ever seen, there almost invariably being a nasty break at the junction of the beak and wattle. How constantly in our show reports we find the remark, "badly set beak," a further defect being lack of width and fullness over the wattle and between the eye and the beak, whereas a good front is half the making of a good bird. Often, however, these head points are more fully developed in partly laced and self-colored birds, although so difficult to produce in conjunction with good lacing.

This, which is always so attractive, should be even, each feather being edged with the desired color; and in the blacks and duns especially this should extend throughout the entire body, as well as being as uniform as possible, and not heavier on the wing butts than towards the tail, the ground color being a pure white, and not peppery or rusty, as is unfortunately so prevalent. In the blues, reds, sulphurs, and yellows the lacing should be upon the wings only, the flights showing a slight edging of color, as well as a spot on each feather of the tail, the remainder of the body being of a good sound color throughout.

Often, however, birds of these colors are now seen with the lacing extending far beyond the wings; the other parts of the body, as well as the tail and flights, showing a greater similarity to the blacks and duns, probably caused by the promiscuous crossing of the two kinds of marking and the pairing of extra well-laced birds together. The blue and silver-barred birds are very beautiful, if quite sound in color and the bars as nearly pure white as possible; but this, in conjunction with good flight markings and perfect tail spots, is as difficult to obtain as good lacing, one point or the other continually failing to make its desired appearance, so as to get the whole combination perfect. The finish which a closely, well-set peak, as well as a stout thick beak, gives to the head is very apparent, and the frill adds fullness to the chest which makes the body assume that cobby and smart appearance which is so characteristic of the Oriental breed.

To the fancier with an elementary knowledge of pigeons no variety should appeal more strongly, as without unnecessarily disparaging other breeds there remains the fact that to the lover of the beautiful there is none that affords greater pleasure to the eye, no unnecessary trouble, and in the breeding allows a wider margin of chance, which always has a peculiar fascination. With an aviary of the most modest dimensions, provided it is dry, well ventilated, and free from draughts, Blondinettes may be kept equally as well as other varieties of the pigeon tribe, in fact, some of the best birds of the present day have been bred under the most ordinary conditions. The food most suitable is good old maple peas and vetches, with a little dari and wheat, and an occasional sprinkling of hemp and canary seed, and it is seldom that one is found ailing, a pinch of Epsom salts generally working the desired effect should such be the case. They are subject to no disease other than those to which the generality of pigeons are liable, and the same may be said of all the conditions under which they are generally kept.

Perhaps it is in the selection of the most suitable birds for mating together, where observation and experience are the more necessary if first-class specimens are to be obtained. It has been generally laid down that two show birds cannot always be relied upon to produce good exhibition stock, although in every case this must not be assumed; still, some of the best birds known have been bred from parents, one of which would be apparently of very inferior merit, but

which still possessed one or two valuable points very strongly developed. There is no doubt that to obtain good structural points the best hens possible should be procured, but unfortunately in this particular variety they are difficult to find, and to anyone possessing a good stud of hens, with the requisite knowledge of pairing, success must ultimately be assured.

Strain, again, will always tell its tale, an illustration of which the writer experienced some years ago. A self-colored black cock, probably bred off first-class stock, mated to a bad-colored hen produced a black laced youngster, one of the best-laced pigeons that has been seen for years. The probability is that the cock was bred off laced parents, and of a consolidated strain, and the result was the reproduction of the lacing in the young bird, the mongrel properties of the hen being entirely overcome by the concentration of strain which existed in the cock.

Although Blondinettes have no difficulty in bringing up their young, especially if assisted by occasional hand feeding when required, still it is always advisable to have a few feeders available, as some birds of even any variety are not good parents, and to be able to transfer a promising youngster that is not thriving as it should to foster parents often saves what might become a valuable bird. Long-faced Tumblers and Flying Homers are perhaps the most useful for this purpose, and can be generally relied on to do the requisite duty if not unnecessarily interfered with.

For exhibition no birds adapt themselves more readily, the faking and trimming of which we hear so much in some of the other varieties being entirely dispensed with; no attention is needed to eye ceres, and wattles require no manipulation, possibly just the tip of the beak may sometimes be shortened, beyond this nothing is legitimate. Many birds, in fact, can be taken direct from the aviary and packed for show without the slightest preparation, of course, assuming that they are kept under ordinary cleanly conditions.

Speaking of showing, it is somewhat remarkable that so few first-class exhibition birds have been bred, i. e., those that will stand the ordeal of the show-pen after their first year. At the present time the really first-class cocks can be easily numbered on one's fingers, and birds that were winning two or three years ago can still hold their own against anything that has been produced since. This, of course, is not a good sign, but since the days of Verdon's famous stud the general

all-round improvement has not been maintained, and to-day no better opportunity could be found for the culture and development of the exhibition bird; in fact, there is a big opening for anyone with the necessary inclination to take up the Blondinette, there being no very high studs in existence, and no breeder who can put down a team of birds very far superior to others who identify themselves with this particular variety. The Fancy, in fact, was never more open, and perhaps never in a more healthy condition.

A few years ago we were periodically startled with the announcement that a noted bird had been imported from Smyrna, but even that source of production has apparently been exhausted, nothing of any great value being obtainable just now, in fact, it is generally conceded that the home-bred stock easily compete with the imported birds. This is not so much due to the improvement at home, as to the fact that all the best birds from abroad have been secured.

Reverting to the origin of the Blondinette, perhaps the testimony of Mr. Caridia, a native of the East, as given in Fulton's Book of Pigeons, would not be inappropriate. Speaking of Blondinettes he proceeds as follows:—"About twenty-five years ago one of the principal Oriental fanciers conceived the idea of breeding, if possible, every variety they possessed with the grouse muffs of the Satinette. He commenced first with the Owl tribe, and he succeeded in breeding from a cross of a silver Owl and a Satinette a blue Owl with partially-feathered legs. He then mated this blue Owl with a Satinette hen, and this cross produced the first Blondinette, which I succeeded in obtaining from him. But you must understand that, though this young bird was grouse muffed and of a similar body and shoulder color to the present birds, it only possessed small white spots on the tail feathers, and none on the flights. This proved a cock bird, and soon after I met with a similarly bred hen, as nearly like the cock as possible, bred by a Turkish fancier, which I procured and mated to the cock I had; but before these birds began to breed I departed for America, where, after a year, I received the information that my stock was in the hands of the old Presbyterian I alluded to previously. Under his care their cultivation commenced, but very soon it spread, and it became the aim of every fancier."

Practically the only literature we have on Oriental Frills is contained in the section devoted to them in this

most interesting book, and the colored plates, so beautifully executed by our old friend Mr. Ludlow, are in themselves a treat of which those who have not had the pleasure of seeing should avail themselves at the first opportunity. It would be impossible at the present time, and particularly in this connection, to omit a personal reference to Mr. Ludlow, to whom we are indebted in the first instance for the permanent introduction of the Oriental frilled varieties into this country, and it affords a fitting opportunity for offering to him an expression of the deepest gratitude for all he has done for the Oriental Fancy generally, as well as adding a word of appreciation and respect for the integrity of purpose which has always characterized him, and for tendering to him the thanks of the whole of the Fancy for the artistic productions which will ever be associated with his name, and which will be handed down to posterity as the work of Britain's greatest "artist, fancier, and judge."

In conclusion, the writer would like just to add a personal remark, and, in venturing to hope that the foregoing notes may be of some little interest to others, always contemplates with pleasure the happy hours spent in the tending and rearing of these "feathered gems," and with confidence has no hesitation in saying that none of the anxieties and disappointments incidental to their culture has in any degree damped his enthusiasm for what he makes free to describe as the "fairest flowers of the Pigeon Fancy."

Hot Springs Supplanting Hens.

A novel experiment is being made by a resident of Canon City, Colo., who last summer purchased the Atlas artesian well, about two miles east of the city. He is utilizing the warm water of this well, which has a temperature of 100 degrees, for hatching and brooding chickens on a large scale. As an experiment, he placed nine eggs in a water-tight wooden box and placed it in the flume that conveys the water from the well to a nearby ditch. In due time he removed the box and found a live chicken in each egg. He at once began planning for the establishment of a hatchery and chicken ranch on an extensive scale. Incubators specially constructed are being made and will be placed so as to be in continual contact with the running water, which furnishes an ideal incubation, supplying the necessary moisture which the ordinary patent incubator fails to do.

NEW YORK MARKET REPORT.

EGGS—Receipts for the week ending Saturday, March 17th, 87,304 cases. State and other nearby fresh selected white, 21c, 22c. Western, fresh gathered firsts, 16c. Kentucky firsts, 16c. Tennessee firsts, 15½c. Duck eggs, 32c, 32c.

DRESSED POULTRY—Receipts for week, 15,402 packages. Philadelphia chickens, 30c, 35c; Western fancy, 16c, 17c; ducklings, 20c, 22c.

LIVE POULTRY—Receipts for the week, 39 cars. Spring chickens, 11½c; turkeys, 18c, 20c; ducks, 75c, 85c per pair.

Mr. William J. Powers, one of the
most genial hosts of New York City,
a stockholder and advertiser in The
American Fancier, always stands
ready to entertain the poultrymen at
No. 63 Dey street. Mr. Powers has
one of the finest art galleries in this
bailiwick and all the boys will appre-
ciate the pictures that they see there;
especially when they come down or
over to the metropolis of America.
Mr. John Albert Lewis, the photo-
graphic artist of The American Fan-
cier, is going to take a picture of one
of Mr. Powers' oil paintings and it
will appear on all of Mr. Powers'
cards. In a short time a reproduction
will also appear in The American
Fancier.

"Slip shod" habits of management
are the greatest drawbacks to success-
ful poultry raising.

WHITE WYANDOTTES

STANDARD-BRED FANCIERS' HEADQUARTERS

Alfalfa for feeding in winter is des-
tined to become quite an indispens-
able factor in the poultry yard. The
poultryman who will establish a field
of growing alfalfa for his poultry to
have access to for green pasture will
be astonished and pleased with the re-
sult. There is not as much importance
attached to having suitable green pas-
ture for fowls and growing chicks as
there should be.

Damp floors are a source of prolific
trouble with both fowls and chicks.
Often the floors do not have the ap-
pearance of being damp, consequently
troubles are laid to other sources.
Damp floors do not affect the fowls
as much as the chicks which roost or
hover on them. All poultry house
floors should be arranged to avoid pos-
sible dampness from any source or
cause.

The prices at which some noted
specimens of the poultry kingdom has
been sold this year indicate one or two
things quite assuredly. There are
either some cases of the danger line
of "hen fever" or else there are a good
many life insurance presidents dis-
guised as poultry fanciers. The price
of "settings" in some instances is as
much as is demanded for a good trio
of some of the popular pure breeds.
These facts show what value is placed
on winning specimens in such shows
as New York and Boston, where the
competition is a battle royal among
each season's poultry production.

Photographic illustrations of fowls
are educational but they should not be
"touched up" to idealize the breed they
represent. The so-called ideal pictures
mislead the novice and too often por-
tray a specimen that nature could not
create. When we see Barred Ply-
mouth Rocks of both sexes pictured
with geometrical rings of plumage
markings from head to tail, and label-
ed as specimens of "John Liebig's"
stock which were winners at "Nosuch-
town Fair," it's too much. Bill Green
writes to a well-known legitimate Rock
breeder that he can buy eggs from Lie-
big's Convict Striped Rocks for "a dol-
lar a sittin'." "Why should I pay you
more when your birds hain't got them
ring streaks on as good." Liebig
makes a double sale then—sells the
eggs and Bill Green.

All work in the poultry yard should
have a double value. It should be for
the present occasion and the future.
The half-way doing things serves some
purpose for the present but is creat-
ing trouble for the future. Thorough
proper work is a degree beyond pres-
ent requirements. Neglects are al-
ways penalties that have sooner or
later to be accounted for. The poultry
business is no exception, unless that
the fact is that the neglects will cause
more serious trouble than almost any
other business.

Remember that warm spring sun-
shine gives birth to lots of vermin.
Filth is a good source for starting pro-
pogation of poultry yards troubles. To
head off all chances of these pestifer-
ous invasions, commence spring house
cleaning on the poultry premises early.
Don't allow any loophole for escape.

Crack, crevice corners, everywhere
should be powdered.

Avoid the mistakes of last season.
Make it more of a point to study con-
ditions and methods of feeding. De-
pend on your own knowledge of exist-
ing affairs. The best help on earth
among poultry is yourself. Of course
you may have an allright man who will
obey your instructions like a soldier,
and you may think that is O. K. But
it is not. The man is yet to be dis-
covered who can or who will, or who
does enter into poultry keeping with
the same ideas his "boss" has. Of
course when there are owners who do
not know and hire well-known poultry
experts as managers, then these man-
agers must take on themselves this re-
sponsibility, just as many of them are
to-day so, successfully doing.

It is absurd to talk about "fancy
fowls" saying their usefulness is con-
fined to the show room. Such talk is
evidence of dense ignorance. It is the
pure bred fowls that have developed
the wonderful increase in utility of
poultry. Increased egg production
per hen per year, heavier carcasses for
a given age of chicks, early maturity,
early egg-laying, the demand for poul-
try produces as pure wholesome food,
all these things have resulted from the
so-called fanciers' enterprise. The
farmers who decry pure breeds have
been left, as it were, by the wayside,
and in consequence the "fanciers" are
getting the major share of the millions
annually spent for first-class poultry
products on the commercial side, too.

There are so many "only way" to
raise chicks that the beginner is puz-
zled to select the "easiest," for he can-
not decide which is the best. Between
the "dry" method which is one of the
"onlys" and the mixed food "only"
there is a middle ground of common
sense. Good judgment is required no
matter how "good" the food may be.
It is the feeding of the young chicks
at the start that counts—the starting
them down the chicken road for life.
Common sense takes into considera-
tion the conditions of wild fowls in
nature. No sloppy food start of the
young, no great crowding conditions,
no scrambling over each other in lim-
ited space for food, no heaps of sur-
plus food left over, etc. Access to
clean, sharp sand grit is essential from
the start, and almost any sweet food
soft, but not sloppy, can be started
with, and in three or four days the diet
can be greatly varied, provided every-
thing is small, not in large pieces.

If Bill Resmith can succeed in poul-
try raising, why not you? If Miss
Squintley makes a marked success in
the business, why should not your
daughter, who has time hanging heavy
on her existence on the farm, where
there is every natural resource await-
ing for someone to take advantage of,
do likewise? Go then and do likewise.
If Mr. Workington, who has broken
down his health in confining city work,
can go to the country and build up his
health and a paying poultry business,
why don't you shake off that "Sarsa-
prilla" feeling and do likewise? There
are lots of people who are using an un-
due amount of effort to make a living
by doubtful methods. Methods that re-
quire no manual exertion that could be-
come successful in the poultry busi-
ness with half the amount of study
and effort—provided, of course, they
kill the germ of laziness that lurks in
their systems.

SUBSCRIPTIONS.

Subscription, \$1.00 per year.
Foreign subscription, \$1.50 per year.
All subscriptions payable in advance.

NOTICE TO SUBSCRIBERS.

Subscribers will be notified when their subscription expires. If a subscriber wishes his subscription to the paper to be continued he must so notify this office and send the amount in payment for the same, otherwise the subscription will be discontinued.

IMPORTANT NOTICE.

All matter, advertising or otherwise, must reach the office of The American Fancier, No. 26 Cortlandt Street, New York City, not later than Tuesday evening of the week in which same is to appear.

ADVERTISING.

The advertising rate in The American Fancier is fifty cents per inch for each insertion. Five per cent. discount for payment in advance for six months insertions, and ten per cent. for payment in advance for one year's insertion.

CLASSIFIED AD RATES.

Forty-two words or less one time fifty cents; three times, \$1.00; thirteen times, \$4.00; twenty-six times, \$6.00; fifty-two times, \$12.00. Additional words at the rate of two cents each for one insertion, or one cent each for each insertion when run thirteen times. PAYABLE IN ADVANCE.

THE AMERICAN FANCIER PRINTING AND PUBLISHING COMPANY.

OSSINING, N. Y.

Havemeyer Building, 26 Cortlandt Street.

New York City.

We regret to learn that it was impossible to effect a consolidation of the two poultry associations in Fulton County, N. Y. "In union there is strength," is an old and true saying. A divided house is never of any material benefit to either faction. As will be seen in another column of this issue the old Adirondack Club has elected its officers for the ensuing year, and is making preparations for a show to be held in the city of Johnstown, next December. Having been identified with this club since its inception many years ago, and been through all the famous Johnstown shows of the past, the writer of these notes naturally feels more than a passing interest in the old society and the show that is to come. The selection of Horatio Seymour Wemple as president is a most excellent one. Being a fancier himself and a gentleman of sound business judgment, his guiding hand will be very much in evidence in administering the affairs of the Club. The bunch of vice-presidents are pretty well known and will cut a few cakes of ice when the time comes. The Secretary and Treasurer, Barnaby Warhorse Mosher is a very old bird at the business and is the right man in the right place. The Executive Committee is composed of real chicken fanciers who have been there before. The selection of Frank B. Sutliff, as Superintendent, and Leonard Putnam, as his assistant, is to be very highly commended.

The late lamented John Glasgow frequently remarked: "Johnstown is the fancier's show of America." Its success was due to the fact that the management was composed of practical and genuine fanciers that treated all exhibitors alike, and entertained visiting fanciers in a way that the historic old city of Johnstown is noted for. Judges were selected by the Club, not by outside interference. The classes assigned to each Judge were published in the premium list. Premiums were paid before the show closed and all specials were delivered to the winners just as promptly. Judging was completed the first day and awards published the next. All this helped to make the Johnstown Show famous. The citizens did the rest and every fancier that ever attended a Johnstown banquet will testify to the fact that "he had the time of his life," to use a familiar phrase. Good fellowship reigned supreme, and without that a fancier's show is a frost. Look out for the next Johnstown Show!

Doctor Sitterly, President of the Schenectady Show was a welcome caller at The American Fancier's office one day last week. "Doc." has the Sebright Bantam fever as bad as ever, and it started some fifteen years ago. He was highly pleased to read the articles on Sebrights from the Feathered World.

This reminds us of several letters received from fanciers complimenting The American Fancier on the publication of articles taken from English papers. It is a well known fact that England is a country of fanciers and has among the fraternity a large number of able writers on poultry, pigeons and pet stock. It is our purpose to reprint such articles from time to time, giving the names of the writers and the credit to the journals from which we clip the articles.

The Long Island Poultry Association was formed March 14th, at Mineola, Long Island, N. Y. Mr. P. H. Scudder was elected president, and Mr. Robert Seaman, secretary-treasurer. The object is to better the poultry interest, both utility and fancy, on the Island. About forty members were in attendance and a large number of poultrymen who were unable to be present sent cards and joined the Association. This is a move in the right direction, as Long Island, like New Jersey, is destined to be a veritable feathered kingdom. The soil and climate seem to be particularly adapted for chicken and duck culture.

Wanted: The address of Mr. John Brett, formerly of Fisher's Island, N.Y. Our old friend John will hear something to his advantage when located.

There are a bunch of White Wyandottes numbering two hundred, at Egg Harbor City, New Jersey, that have averaged over 200 eggs per capita in 365 days. By using the trap nest system this selection of great layers was accomplished. The writer of these notes expects to visit the poultry farm in question, where these white egg machines are located, shortly, and describe the methods used there.

J. Frank Hiller, poultryman, at the Columbia Stock Farm, Red Bank, N. J., arrived from Fort Plain, N. Y., on Monday, March 19th, with a carload of chickens, mostly White Leghorns, and particularly youngsters not over three weeks of age. He started in a blizzard and arrived during one, was on the road two days and managed to land over one thousand chickens in good shape. They were kept in Prairie State Colony brooders during transit, Mr. Hiller being in the car at all times. This demonstrated one fact that when properly housed or packed in brooders or specially arranged boxes, young chickens can be shipped great distances by freight, even in the winter time, provided a caretaker is with them. The loss on this trip was very slight and caused by trampling and crowding only, due to the fact that many more chickens were placed in the brooders than the capacity of the latter permitted. This was unavoidable in a case of this kind.

We are pleased to extend the glad hand to the railroad officials who saw that this car was shoved through with its live freight, in rush time. They felt as much interest in the success of the trip as did Mr. Hiller. If we could induce our express companies to take an equal interest and pride in such shipments, it would result in much good to all concerned. It is positively hazardous to send birds by express in cold weather. Too many fine birds have been smothered because they were placed in an overheated car. The express rates are high enough to permit the employment of men that can look after valuable shipments of birds in a manner that will reflect credit on themselves and the companies they represent.

We are bringing this matter up for the reason that a new branch of the poultry industry is being rapidly pushed, viz: The selling of live chicks a few days old to buyers who have no facilities for hatching same. In France

this has become to be quite a big business. But transportation facilities in the frog-eaters country are said to be far better than in this country. The little chickens are shipped in specially prepared boxes and reach their destination in excellent condition. In a vast country like ours, with the many climates and sudden changes, shipping young chickens in winter and spring is not an easy proposition. But our express companies can make it comparatively safe to ship in this season if they provided proper handling of such perishable live stock.

The free seed distribution has been stopped by Congress. It has taken years to accomplish this, but better late than never. It has been a positive injury to the honest seedsmen of the United States of America to compete against what has been nothing more than a political graft. If the United States Government could stop printing envelopes at cut rates and allow the American printer to have a fair show for his alley, another good thing will have been accomplished.

J. H. Drevensedt

WORTH REMEMBERING.

That paper will lie still and allow nonsense as well as sense to be written upon it, and by anyone. Therefore you are at liberty to credit or discredit any of the following remarks, by the writer, as there will be some things said that you will readily believe, while there will probably be other sayings that you will not believe, until you have paid well for your tuition, and learned it from that venerable teacher, experience.

That live stock breeding cannot be made a success by men ignorant, in any branch, connected with the breed or variety they own, either in the proper care, proper surroundings, proper food, popular blood lines, and the good or bad qualities that are transmitted by the different blood lines.

That no man can make a success of any sort of live stock breeding that enters into the business purely for dollars and has no love and no interest in the breed he chose, beyond a financial interest.

That no man ever achieved the honor of improving a breed, in typical breed points, that carried on his live stock breeding as a side issue, and gave his thought and time to another business or to pleasure.

That there are no days of total rest in this business, but stock, old and young, must be given the same care on the Sabbath as on any day of the week, by someone, and the only proper one to do it is their regular attendant—be that the owner, his superintendent, or the regular man for this purpose.

That no sort of live stock, be it poultry, pigeons, pigs or pups, will thrive if they are not handled quietly and with kindness, and have confidence in their caretaker. If the poultry and pigeons "fly the coop" when your man enters their quarters, and the puppies rush to the far corner of their kennel yards, and droop their ears and tails, you had best discharge, at once, and on the spot, their handler and seek another.

That the person who is not in sympathy with the stock he is caring for does not understand their silent language, their expression, and their actions, is not the proper person to intrust their care to, and will do more damage than good among them.

That lacking the proper qualifications is the main reason why so many who have undertaken stock breeding have made a failure of it. Many who still own, and actually raise live stock, of a sort not as good as their original foundation stock, to say nothing of advancing, are failures, from an expert's standpoint, yet many of them do not appear to realize it.

That it is not always, in fact, seldom is, the case, that the gentleman who wears the most expensive and best fitted clothes, and the largest diamonds, and talks the loudest or uses the most select language, knows the most about live stock or live stock breeding. It is more generally the man, who, as a boy, lived among the stock, cared for them, studied them and their habits and disposition, and made friends of them. There are plenty of other things to remember which will appear later.

D. E. B. O'NAIR.

A BUNCH OF BOUQUETS.

Thrown by Sincere Admirers of The American Fancier.

George R. Schaubert, of the Clifton Hill Farm, at Ballston, Lake, N. Y.:

"Am glad The Fancier has settled in New York City, and wish it unlimited success. It is O. K."

J. E. Burt, of Athol, Mass.:

"It was with grateful satisfaction that I learned that The American Fancier has got back home again. It has always been a paying proposition for me, although I have not been a large advertiser, and I know that it will maintain its reputation under the new management."

T. E. Orr, of the Beaver Hill Farm, Beaver, Pa.:

"Wish The American Fancier great success. We need a fearless, independent, unbiased weekly poultry journal, such as I know it will be."

J. E. Jodrey, Danvers, Mass.:

"I am glad The American Fancier is back on the 'Owl Sod.' I wish it every success."

C. W. Hoitt, Nassau, New Hampshire:

"I have just received the first number of The American Fancier under the new order of things. While I always liked the paper, it seems that you have polished it up a bit, even if it is but a sample of what you are going to do. Enclosed please find my dollar. Kindly let me in on the first round."

Basil D. Miller, Proprietor Kriemhild Poultry Yards, Peterboro, N. Y.:

"The good old Fancier is most welcome. Enclosed you will find one dollar for renewal of subscription."

Noxon's Floral Poultry Yards, Bloomingburgh, N. Y.:

"The rates have been put where people of small capital can now afford to advertise. That is the reason I send you an ad."

Charles H. Brundage, Danbury, Conn.:

"I am pleased to see that the old eagle is still screaming, and still more pleased to see 'Drev.' back at the helm. He is the man for editor, and allow me to congratulate you one and all upon the four-in-hand you have to run the one weekly fancier's paper in America."

Fred W. Proctor, Spencer, Mass.:

"Was much pleased to take the wrapper off what proved to be a genuine old American Fancier, of the kind we always used, as the Castoria people say. Congratulations, and when the Pilsener articles come in again, I shall think old times back again, for sure. I have always liked the features of reprinting what was worth while from English sources."

Fred C. Lisk, Romulus, N. Y.:

"The American Fancier is a fine appearing sheet, and I wish you all success."

No poultryman in or out of America is more interested in the development of the winter egg supply, in the opening issue of the new American Fancier. I promised to give an account of my operations during the past fall and winter.

Locating here eleven months since, I had but the fog end of the season to work on, and could stock my houses only with such stock as was on the market, this became more difficult than in ordinary years owing to the exceedingly high market price which had ruled on eggs for the winter, making owners loth to part with stock which were paying a good profit on their keep.

All the feed has been bought except some wheat raised for the 1906 crop of chicks, and oats enough to form 25 per cent of the evening grain ration in the way of green food I have been exceptionally well prepared. Seventeen bushels of turnips were grown, and two tons of second crop clover and timothy hay was cured and is now coming out as green as lawn clippings, after steaming, it being fine and having an abundance, have not taken the trouble to cut it into short lengths; the fowl pick out what they want and the scratching material absorbs what they discard.

Some lots of layers moulted rather early, and I was tempted on many occasions to consult the butcher, but later developments caused me to congratulate myself that I did not.

Once, through moulting, they commenced laying, and continued throughout the fall and winter, being now in the very best of condition, I am moving them to market at top prices and replacing them with the hatch of 1905, which I hope will be equally prolific the coming winter.

Having in mind the snow, so prone to drift in the open shed, I rearranged my shed room last fall and covered most of the fronts with muslin.

The convenience in feeding and the early morning protection from the cold has more than paid me for the time and expense. We only had one snow storm to test them, but everything was snug and no time lost shoveling out the snow. As for the result in eggs, cannot say that I found them any benefit. A portion of one flock, having access to the farm yard, persisted in roosting under the shed attached to the cattle barn, and would stand around in the cold until feeding time, after which they would watch a chance to dodge into the cattle barn for the day. These far outlayed the balance of the flock comfortably housed at night and having their light, warm shed to scratch in during the day.

To my mind there is only one house to depend on for winter eggs, and that is the long, roomy house with a northern exposure and with gates running

from pen to pen. In such a house you are in among the fowls and note everything going on; the fowls themselves get accustomed to your presence and give better returns.

My feed for the past has been a hot morning mash of wheat middlings, meat scrap or green cut bone, wheat or corn bran, hominy, and in the coldest weather gluten has been added. When water was given, a basket of turnips cut in half was taken along; at noon unthreshed buckwheat or cracked corn was raked in the litter; at night corn, oats and wheat were fed and water vessels filled. The result has been a steady supply of eggs, and was able to ship regularly every week throughout the winter.

Prices have not ruled as high this winter as for either 1904 or 1905.

THE HEN.

(The Guilder.)

Alas! my child, where is the pen
That can do justice to the hen?
Like loyalty, she goes her way,
Laying foundations every day.
Though not for public buildings, yet
For custard, cake and omelet.
Or, if too old for such a use,
They have their fling at some abuse,
As when to censure plays unfit
Upon the stage they make a hit;
Or at elections seal the fate
Of an obnoxious candidate.
No wonder, child, we prize the hen;
Whose egg is mightier than the pen.

IMPORTANT NOTICE!

Patrons should bear in mind that all accounts previous to March 1, 1906, are due to the Howard Publishing Co., No. 714 Twelfth Street, N. W., Washington, D. C. All accounts after that date are due to The American Fancier Printing and Publishing Co., Havemeyer Building, No. 26 Cortlandt Street, New York City.

Poultry operations may prove a success or failure in proportion to the amount of zeal and energy put forth.

NO CONSOLIDATION.

Local Poultry Clubs Fail to Agree.
Adirondacks Elect Officers.

Johnstown, N. Y., March 13.—At the annual meeting of the Adirondack Poultry and Pet Stock Club, held last evening, a delegation of the members of the Fulton County Association was present by invitation to consider the matter of consolidating the two organizations. After considering the various phases of the question, no satisfactory arrangement was reached.

The Adirondack Club then elected the following officers:

President, H. S. Wemple, Fultonville; Vice-Presidents, H. J. Quillhot, J. H. Drevenstedt, Johnstown; F. B. Zimmer, Gloversville; Wm. Holmes, Shelton, Conn.; D. A. Nichols, Shelton, Conn.; W. E. Richmond, Buffalo; R. L. Hutchings, Rutherford, N. J.; Jos. L. Shull, Johnstown; R. J. Ruliffson, Rochester; G. T. Williams, Buffalo; C. B. Knox, Johnstown; E. T. De Graff, Amsterdam; John C. Rice, Johnstown; A. F. Pierce, Winchester, N. H.; Martin Kennedy, Johnstown; Dr. A. H. Phelps, Glens Falls; Secretary and Treasurer, B. W. Mosher, Johnstown; Recording Secretary, Samuel Lair, Johnstown; Executive Committee, W. J. Weeper, Fonda; E. J. Lorentz, Aaron Putnam, Charles Eisenmann, B. C. Putnam, Johnstown; Superintendent, Frank B. Sutliff; Assistant Superintendent, Leonard Putnam, Johnstown.

The club will hold its show on a date yet to be decided between December 15th and January 15th. Several new members were added last evening.

Keep an account of your poultry business. A person who can't go to that much trouble is too indifferent to succeed in anything.

Typewriter Users Know that a new Remington model means a new standard of typewriter work.

The New REMINGTON Models

supply a demand for SWIFTER, EASIER, BETTER TYPEWRITING than any writing machine has ever done before.

As a result of this demand the Remington factory—the greatest typewriter plant in the world—is now breaking all production records.

The new Remington Models have a brand new escapement, new variable line spacer and other new features by which Remington quality is intensified and Remington supremacy is emphasized.

Winwood, Pa.

Chicken Cholera

If your chickens or other fowl have
cholera or other form of bowel complaint,
one box of POLTRYLIF will stop it. It
will also prevent any form of bowel com-
plaint or case of cholera getting into
your flocks. Full directions with box.
Send 32 cents for box which includes
postage to your town. M. McDermott,
Coleman, Mo. 643-644

ROYAL RED Strain Rose Comb Rhode
Island Reds are the really standard strain
of this breed of fowls for beauty and
utility. "Royal Red" is to R. C. R. I.
Reds what "Sterling" is to Silver.
A sitting or two of eggs will prove this
statement, and they are \$5.00 the sitting
for the very best. Circular free. A. M.
Crandell & Son, Middle Falls, N.Y. 643-646

PRAIRIE STATE Combination Hen Egg and Duck Incubator

This combination IMPROVED STANDARD PRAIRIE STATE INCUBATOR
is constructed with extra deep egg chambers and nursery drawers,
adapting it to the requirements of duck raisers without interfering in
the least with its efficiency for hatching broilers and soft roasters. It
has cooling slides on top which dispense with cooling tables, and it is
made in RIGHTS and LEFTS to utilize floor space, allowing four machines
to be worked in a solid block. The STANDARD INCUBATOR BOOK de-
scribes its many desirable features at length,—you'll want to know what
they are. Write for the book.

How to Build a Piano Box Brooder

Take a piano or packing box of suitable size, some netting, some hinges,
a UNIVERSAL HOVER and about two hours time, and you can make
almost as good a brooder as money can buy, and save several dollars.
The UNIVERSAL HOVER may be used in a half-dozen different com-
binations and is the BIGGEST HIT we have ever made—so poultrymen
say. Write for BROODER BOOK—shows how to use it. We have FIVE
OTHER VALUABLE POULTRY BOOKS, FREE if you ask for them, and
we'll put your name on our list for others soon to follow. Write today
PRAIRIE STATE INCUBATOR CO., 496 MAIN ST., HOMER CITY, PA.

At the New York State Fair, Syracuse, N.Y.

Martin's White Wyandottes won more prizes than any other exhibitor. First and 3rd cockerel, 1st and 3rd pullet, 2nd cock, 2nd hen and 2nd pen. This was a most remarkable win, owing to the fact that previous to this show they had been cooped nearly two weeks at the Toronto show, and thus were not in as good condition as the birds they competed with. Finest lot of Stay-White Cockerels I ever bred. Send for catalogue.

MODEL INCUBATORS and BROODERS

are the only Incubators and Brooders made by me. They embody all my latest improvements, and are made under my direct supervision. Do not become confused in the name and accept a weak imitation. It is no one part that makes a successful hatcher, but a nice balance needs to be secured in the heating, regulation and ventilation to produce the successful and profitable results.

MY NEW BOOK
"Eggs, Broilers and Roasters"
An Easy Lesson in Practical Poultry Culture. A Book of Value to all Poultrymen.

It gives the prices paid for eggs and poultry week by week for the past three years. It describes the profitable combinations of egg, broiler and roaster farms. It tells how and when a hatch taken off each week in the year could be most profitably marketed. It shows how you can make \$2.00 on a large winter roaster. It tells what profits can be made with each of the popular breeds, and the costs of production. It shows what can be done with A Leghorn Egg Farm, A Leghorn Egg and Broiler Farm, A Wyandotte Egg Farm, A Wyandotte Egg and Broiler Farm, A Plymouth Rock Egg Farm, A Plymouth Rock Egg and Roaster Farm; Twelve months with Broilers; Twelve months with Roasters. This valuable work mailed FREE upon request. My model Incubators are used on the money-making farms. Model methods are money-making methods. I have helped thousands to make money with poultry. It is my business to teach those who use my Incubators and Brooders to do so profitably. Whether your needs are small or large, I shall be glad to advise with you.

D. & H. ANNOUNCEMENT

THE D. & H. CORPORATION
J. H. Drevenstedt, President and Treasurer, and R. L. Hutchings, Secretary, will take possession of Columbia Stock Farm, at Red Bank, New Jersey, on April 2nd, 1906.

This finely equipped plant will be run as a practical poultry farm, the production of choice eggs and meat for market being a specialty.

J. Frank Hiller, formerly of Fort Plain, N. Y., will be the poultryman. The plant itself will be under the personal supervision of J. H. Drevenstedt and will be used as an experimental farm for the AMERICAN FANCIER.

The varieties are: American, Buff Plymouth Rocks; Italian, White Leghorns; French, La Fleche. These were selected for their superior excellence as the most profitable producers of their respective races.

The Buff Rocks represent the best blood in America. The White Leghorns, the best and hardiest egg laying strain obtainable. The La Fleche, the best selection of Canadian and French birds.

We will state right here that we will advertise no eggs for sale or compete in any way with advertisers in THE AMERICAN FANCIER.

This is purely a business proposition based on carefully prepared lines. It is the intention of the D. & H. corporation to do all it can to help the poultry business in the United States and plans have been made to send teams of representative birds next fall to the great shows of England and Canada, each individual exhibitor showing his birds in his own name. We simply act as agents.

Mr. George H. Burgott, the well known expert judge and fancier, has been engaged to take charge of the exhibits. The scheme is as broad as it is large and it will result in much good to all concerned.

The above is a partial explanation of the D. & H. advertisement in the poultry papers of "The Square Deal" and "Ask Drev."

More later.

A National Magazine Devoted to Standardbred Stock

VOLUME XXV

OSSINING, N. Y., MARCH 31, 1906

NO. 644

THE SATINETTE

(By D. G. Watson in The Feathered World)

The Satinette in the illustration below, awarded the challenge trophy at the last Dairy Show, having been the third bred by its exhibitor which has won the trophy, the latter thereby became his property, the previous wins having been in 1901 and 1903.

The 1901 bird was the model of the illustration that appeared in The Feathered World in that year a few weeks before the show, and of the colored plate issued with No. 681. This bird was of the same color as that in the illustration, but plain-headed. The 1903 bird was a crested black-laced Satinette, the lacing being exceptionally good.

The Satinette is believed to be the oldest of the varieties forming what are known as "Oriental Frills," and when seen in perfection is not surpassed in beauty by any of the others. Although the term Satinette is now generally confined to birds that have a white or pinky shade on the wings with a laced edging to each feather, the primary flights being white, the Sulphurette and Brunette are of the same variety, differing only in the shade of color. The Bluetette and the Silverette, which are barred birds, are also a sub-variety of the Satinette, and when paired with laced birds breed true to markings.

Satinettes and Bluettes should not, however, be paired together more than is necessary, as the lacing of the Satinettes produced, particularly at the butts, will probably be of a washed-out blue tint, which is far from pleasing. The head, neck and body under-parts in all these birds should be pure white, the thighs should be of the same color, but they are generally more or less colored, and the legs should be grouse-muffed, the feathers being continued to the toe-nails. They may either be plain-headed or crested.

When first introduced to the British fancier, Satinettes were nearly all plain-headed, and of the blue-laced variety. The ground color on the shoulders was of a brown or a pinky-brown shade, graduating to a lighter tint, the edges of the feathers being of a dark purple-blue color, with an inner line of a neutral shade, forming a very pleasing tricolor. The tail-spots in many of the earlier specimens were nearly circular in form, and the tail of a dark blue color, the spots showing to perfection when the tail was spread, and never failing to extort the admiration of fanciers.

The blue Satinettes have, however, greatly improved in head properties and in color since their first introduction. The aim of the present-day fancier is to produce an almost colorless ground tint on the shoulders, and

in this he has been so successful that specimens tinted like the original Satinettes are now seldom seen in the show pen, as they have very little chance of obtaining a prize, however good they may be in other respects. The lacing at the tips of the feathers is generally more sharply defined than it was originally, and lacks the neutral tint on the inner edge, but if the shade is dark purple it sets off the birds as well as the lacing with the neutral tint on the inner edge.

In pursuit of this clear ground tint of the shoulders, the tail, however, has in some degrees suffered, and many of the most beautifully colored specimens are very gay in the tail, nearly half of the feathers being white, with a narrow edging of blue at the tip. Within the last three or four years, however, it has been the object of many fanciers, by judicious pairing, to endeavor to recover the original tail, and a good deal of success has been attained in this direction, but the "peacock's eye" in perfection seems a thing of the past, the spots having more the appearance of a parallel band when the tail is closed.

The latest of the Satinettes are the black and dun-laced specimens. The first the writer saw was one exhibited by Mr. Joseph Smith about fourteen years ago. It was a black-laced bird, and was awarded first prize in the young class at the Dairy, and second at the Palace. Many fanciers when they first saw the bird were disappointed with it, as it lacked the spot tail of the blue-laced Satinette, and I remember a good many considered that on account of its tail it should not have been in the prize list. Since then, however, great progress has been made in the culture of black and dun-laced birds, especially blacks, and they seem to bid fair to surpass in popularity the blue-laced birds.

For some years after Mr. Smith exhibited his bird no more specimens were seen, until in 1897 Mr. Machin exhibited a black-laced specimen which was awarded the Jubilee Cup at the Palace Show. It was a fair specimen, but not nearly so good as some which have since been produced. It was, however, generally admired, as by this time it was recognized that the tail should be of a silky white color, with laced edging. By a coincidence the writer bred a beautiful dun-laced hen in the same year, but as it had one white feather in its tail and had been bred from a blue-laced cock, he parted with it, as he feared he would lose the distinctive tail markings of the blue Satinette if he bred from it, not then entertaining any thought of breeding black-laced

birds. He, however, had the mortification of seeing the bird second prize at the Palace the following year.

After seeing Mr. Machin's black-laced Satinette at the Palace Show, the writer went in for breeding black as well as blue laces, and he thinks he has been fairly successful it may not be out of place here to state how they were produced.

With a view to improve the head properties of his blue-laced Satinettes, the writer in 1896 became possessed of a grand plain-headed cock. The shoulders of the bird were black like a Turbit, but it had a laced tail and feathered legs. This bird was paired with a good-headed blue-laced hen. The ground color of the hen was faulty, but it had been bred from prize birds and was good in all other points. They bred four birds; one, a cock, was very foul on the breast and it was got rid of. The other three were hens—two Sulphurettes and one the color of the father—and from one or other of these hens all the black laces the writer has bred can claim descent.

The black hen was the most successful breeder of the three. In 1897 she was paired to a plain-headed blue-laced cock. One of their youngsters—a blue-laced cock—was first at Altrincham, and first and medal at the Dairy Show, and another was the dun-laced hen to which reference has been made. In the following year she was paired to a brother of her mate of the previous year, and they produced four beautiful specimens—one blue-laced cock, one dun-laced hen, and two black laced cocks, one of the latter being crested and the other plain-headed.

At the Dairy Show the blue-laced cock carried off the first prize and medal. At the Palace the crested black-laced cock was awarded first and the Jubilee Cup, and the Dairy winner was second; and at Liverpool the plain-headed black was placed first, the Dairy winner second, and the Palace winner third, although in the writer's opinion the latter was the best bird, and the dun hen was awarded a card. The crested black is the bird mentioned by Mr. Machin in his paper on "Oriental Frills," read before the Birmingham Columbian Society in March, 1904.

From him the writer bred two black laces—one a cock, placed third at the Dairy Show, and the other, a hen, was first at the Palace in 1900, and was awarded the Esquilant Trophy by Mr. Allsop. From the dun hen the writer only bred two birds, both black-laced—one a cock, which he still has, bred the winner of the Challenge Trophy at the Dairy Show in 1903; and the other—a hen—won first at the Palace

(Old Class) and was the mother of the winner of the Esquilant Trophy. Last year the writer bred two birds from the 1903 Dairy winner—one a black, and the other a dun—which obtained second prize and third prize respectively at the last Palace Show.

Probably there is no fancier, with the exception of Mr. Machin, of Moseley, with whom the writer has had many a friendly interchange of views on the breeding of black-laced Satinettes, who can claim a greater measure of success in breeding birds of this color, as nearly all the best of those which have been exhibited have been bred either by Mr. Machin or the writer.

The writer would have liked to have said something on the breeding of Satinettes for the benefit of young fanciers, but these notes have already exceeded the limit intended. Any fancier taking up the breeding of Satinettes would do well to get a pair of good birds from an experienced fancier, who knows how they were bred, and can form a good idea what kind of birds they are likely to produce. To purchase a cock from one fancier and a hen from another and, without any knowledge of the previous history of the birds, pair them together in the expectation of producing good birds is almost sure to end in disappointment. Experienced fanciers are very careful about admitting strange birds to their lofts unless they have ascertained the pedigree of the birds, as very frequently they find when this is not done that the cross has perpetuated the faults they wished to correct. It will, however, generally be found that color follows the cock, and form the hen, and some of the most successful exhibitors in the young classes believe their success to be largely due to their having good-colored cocks, even although their head properties may only be third rate. With hens it is the other way about; the color of the feathering is not of so much moment if the bird is well formed and has a good head, provided the marking are regular. The hen, however, should be as free as possible from faults possessed by the cock, or they are likely to be perpetuated in the progeny, and as a good-colored tail is of great importance, adding to the beauty of the bird, birds with gay tails should not be paired together if this can be avoided.

Some fanciers keep feeders for rearing the young, but in most cases they rear their own young, and generally do this successfully. The young birds should, however, not be left longer with their parents than absolutely necessary. A stout and well-formed

KEYSTONE INCUBATORS

The Keystone of poultry profits—Kutz Keystone Incubator successfully hatches big batches of chicks. Constructed in a thorough manner on scientific lines. ROYAL RED Strain Rose Comb Rhode Island Reds are the really standard strain of this breed of fowls for beauty and utility. "Royal Red" is to R. C. R. I. Reds what "Sterling" is to Silver. A sitting or two of eggs will prove this statement, and they are \$5.00 the sitting for the very best. Circular free. A. M. Crandell & Son, Middle Falls, N.Y. 643-646

EXTRA LIGHT BRAHMAS

Eggs, Cockerels, Hens and Pullets, and W. P. Rocks. (640-642) J. A. ROBERTS, Malvern, Pa.

beak is a great desideratum, and in all the short-faced varieties when the young are left too long with their parents the effects are often seen in the formation of the beak. The beak of a young pigeon is soft and pliable, and if the parent bird has a small mouth the result is that the beaks of the young become elongated and thin, through the forcing into the mouth for food. The writer has observed this so frequently that he believes the above to be the cause why the progeny of so many stout-beaked birds are found deficient in this respect.

About the middle of February or the beginning of March is early enough to pair up the birds, and they should not be allowed to breed after the end of July, and should all be separated for the season by the end of August. If the weather has been favorable during the breeding season and their owner has good luck, he should have on an average six birds from each pair, and the birds will have time to get through the moult before the cold weather sets in.

Satinettes, although natives of a warmer clime, are now so thoroughly acclimatized here that there is no difficulty in keeping them in as good condition as any of what we consider the hardier varieties.

NATIONAL BANTAM ASSOCIATION.

Annual Meeting Held at Madison Square Garden, January 3d, 1906.

The thirteenth annual meeting of the National Bantam Association assembled in the press room of Madison Square Garden, at 7:30 on Wednesday evening, January 3d, 1906. Twenty-one members were present. Owing to illness at home, President Ruliffson could not attend the meeting, and Vice-President Courman presided.

The minutes of the twelfth annual meeting were read and accepted.

The Treasurer's report was read showing a balance on hand of \$63.65, and on motion it was accepted and placed on file.

Mr. C. T. Courman, chairman of the Glasgow Memorial Committee, reported that the contract had been made for the die for the medals, but the work had been delayed owing to the lack of funds. Dr. A. H. Phelps made a motion which was seconded, that a voluntary contribution be made at the meeting to raise the deficiency.

Mr. Jehl moved that the amount needed should be taken from the funds of the Association, as he said each member should stand his share of the cost. After a few words by the secretary, showing the condition of the treasury as it would be when all special money had been paid, the motion was carried and the members present responded to the amount of \$15.50.

Mr. Courman said he would go ahead with the word and have the medals for our next exhibition.

Mr. Young told of a visit to Treasurer A. A. Parker, and of his illness, of how Mr. Barker had turned over the Treasurer's book and balance of money in treasury as he could not look after the work of the office.

The Chair called for nominations for the office of president. On motion made by Mr. Jehl and seconded, the name of Mr. Clyde H. Proper was placed in nomination. On motion by Mr. Blunk and seconded, the name of W. J. Greenman was presented. Mr. Graham moved that the nominations

be closed which was seconded and carried.

Vice-President Courman appointed as tellers, Mrs. H. J. Quilhot and Richard Oke. Total number of votes cast were 14, of which Mr. Proper received 9, Mr. Greenman 5.

Moved by Mr. Blunk, seconded and carried that the election of Mr. Proper be made unanimous.

Mr. Oke was nominated for office of treasurer, and on motion he was unanimously elected.

On motion made by Mr. H. J. Quilhot seconded by Mr. Jehl, Mr. Young was elected Secretary.

Vice-President Cornman appointed as a nominating committee to select Vice-Presidents and Board of Directors, Dr. A. N. Phelps, Mr. Charles Jehl and Mr. B. W. Mosher.

The committee reported the following and on motion they were elected:

Vice-Presidents—Hon. C. W. Hoitt, N. H.; J. A. Havemeyer, Jr., Mahwah, N. J.; E. Latham, Brooklyn, N. Y.; Wm. McNeil, London, Canada; Chas. J. Cornman, Carlisle, Pa.; Dr. William Y. Fox, Taunton, Mass.; Chas. Jehl, Long Branch, N. J.; E. R. Collins, Brooklyn, N. Y.

Board of Directors—Miss Selma Winters, College Point, N. Y.; J. T. Kirkpatrick, Easton, Pa.; H. J. Quilpot; Dr. A. H. Phelps, Glens Falls, N. Y.; Wm. Barker, London, Canada; A. J. Ruliffson, Rochester, N. Y.; C. H. Proper, Schoharies, N. Y.; Richard Oke, London, Canada; George L. Young, Brooklyn, N. Y.

At this time the chair was turned over to the new president, and with a few fitting remarks in which he pledged himself to do all in his power for the Association, he entered on his duties as president.

Under new business, Mr. Oke spoke of the poor accommodations provided for the Bantams and said that as the Association had stood by the New York Show, he thought that the Bantam breeds should have better treatment. On motion made, seconded and carried, the following committee was appointed to wait upon Supt. Crawford: Mr. Richard Oke, Mr. A. O. Schilling and Mr. Geo. L. Young.

On motion made, seconded and carried the secretary was directed to write a letter to Treasurer Parker, extending the sympathy of the members.

Eighteen applications for membership were favorably acted upon and the following elected to membership:

Harold C. Congdon, Oak Lawn, R. I.; Jas. B. Fitch, Mt. Vernon, N. Y.; Jas. Glasgow, Mahwah, N. J.; Jos. P. Hill-dorfer, Alleghany City, Pa.; Benj. B. Jones, Lake Roland, Md.; W. W. Kennedy, Red Bank, N. J.; Harold N. Kutchback, Sherburne, N. Y.; John Melvin, Whitinsville, Mass.; J. W. Mitchell, Brooklyn, N. Y.; H. A. McAleen, Mt. Clair, N. J.; C. W. Price, Vailsburg, N. J.; Herbert B. Rowedder, H. M. Raab, Dallaston, N. Y.; W. Roesler, Great Neck, N. Y.; Marion Story, Portchester, N. Y.; J. W. Welsh, Douglastown, N. Y.; Stanley Frethaway, Wilkesbarre, Pa.

The following candidates were nominated to judge at the next New York Show: Mr. H. J. Quilpot, Mr. Richard Oke and Mr. Chas. M. Smith.

After a few words from the President asking the members to try and reach new members, the meeting was adjourned

(Signed)

GEORGE L. YOUNG,
Secretary.

If your Fowls are Sick

and mope about, sneezing; eyes swollen; rattling in throats, they have Roup, the most dangerous disease known to poultrymen.

CONKEY'S ROUP CURE

is the one article that will not only Cure but prevent this disease. It is easily given; kills the germs; tones up the fowl's health. Just as good for Turkeys and for Canker in Pigeons. **GUARANTEED.** Conkey's Roup Cure is sold under a positive guarantee. If it fails to cure Roup, Colds or Canker in any form, your money will be refunded cheerfully.

If your Poultry Supply Dealer or Druggist cannot supply you, send order direct to us. Don't accept a substitute. Insist on Conkey's.

Price, 50 cents, postpaid, makes 25 gallons. \$1.00 75 "

Valuable Book—FREE. Our 25c. book—48 pages of most valuable information on Poultry Diseases mailed to anyone sending 4c. to cover postage. Send for it TO-DAY.

Black Winged Turbits—Cock 1, 2, (1905) 1 John F. Voss.

A. O. C. Turbits—Cock 1, hen 1; Yellow Jacobins, cock 1, Runts (1905) cock 1, 2, hen 1, 2 all to John F. Voss.

A Weekly Journal Devoted to Standardbred Stock.

Application made for second-class rates at the Post Office at Ossining, N. Y.

J. H. DREVENSTEDT, Editor.

SUBSCRIPTIONS.

Subscription, \$1.00 per year.
Foreign subscription, \$1.50 per year.
All subscriptions payable in advance.

NOTICE TO SUBSCRIBERS.

Subscribers will be notified when their subscription expires. If a subscriber wishes his subscription to the paper to be continued he must so notify this office and send the amount in payment for the same, otherwise the subscription will be discontinued.

IMPORTANT NOTICE.

All matter, advertising or otherwise, must reach the office of The American Fancier, No. 26 Cortlandt Street, New York City, not later than Tuesday evening of the week in which same is to appear.

THE AMERICAN FANCIER PRINTING AND PUBLISHING COMPANY.

OSSINING, N. Y.

Havemeyer Building, 26 Cortlandt Street.

New York City.

Parties desiring a real good man as poultryman should consult our want column. They will find there a man that understands every branch of the business, having had long years of experience in breeding and showing stock.

* * *

Fred. W. Proctor, of Spencer, Mass., after thirteen years has succeeded in building up a great string of Rose Combed White Minorcas, eight pound cockerels being pretty good for whites. This new variety is becoming more and more popular every day, surplus stock being scarce.

* * *

What has become of the much heralded Rose Combed Blues? Quite a few columns appeared in our English contemporaries about the great merits of this variety, but they have dropped "into innocuous desuetude" as the Hon. Grover Cleveland would have expressed it. Dr. A. H. Phelps had some a few years ago and claimed they were great layers, the "best that ever."

* * *

D. G. Wetmyer, Lititz, Pa., is now breeding seven varieties of Game Bantams and it is needless to say that they are among the best in the country. He had thirty-five of his birds at Hagerstown last October and landed a large bunch of blue ribbons. Mr. Witmyer sold three hundred and sixty-four dollars worth of bantams from his small ad in The American Fancier

ADVERTISING.

The advertising rate in The American Fancier is fifty cents per inch for each insertion. Five per cent. discount for payment in advance for six months' insertions, and ten per cent. for payment in advance for one year's insertion.

CLASSIFIED AD RATES.

Forty-two words or less one time fifty cents; three times, \$1.00; thirteen times, \$4.00; twenty-six times, \$6.00; fifty-two times, \$12.00. Additional words at the rate of two cents each for one insertion, or one cent each for each insertion when run thirteen times. PAYABLE IN ADVANCE.

since October 1st. It pays to advertise in the right medium.

* * *

Through some oversight the advertisement of Chas. Bennington, of Edmeston, New York, was omitted. At Mr. Bennington's request it re-appears this week. We cannot afford to be without such good fanciers and breeders of Buff Orpingtons as Mr. Bennington is known to be. He is and has the goods to use one of Deacon Ivory Spark's remarks.

* * *

L. P. Clark, Superintendent of Rosemary Farm, Huntington, L. I., whose White Indian Game Cockerel is illustrated in this issue has done much to make excellent fowl fanciers in his section. It is certainly a winner there and no mistake. Mr. Clark enquires whether there is a White Indian Club. We believe not, but think a combination could be made with the Cornish Game Club provided the latter can be located. It is certainly among the missing just at present. There was talk of trying to house the Indians at Madison Square, but seems only a few of the real enthusiasts are left and they can't scare up enough other members to make a go of a new club or get the old one in motion. H. M. Carpenter, Henry P. Kirby and Dr. Wolfe could start up quite an interest in both varieties, especially with Mr. Clark's assistance.

* * *

We are glad to learn that Mr. T. C. Van Wyck, the Superintendent of Poultry at the Poughkeepsie Show, is out again after a long siege in the hospital, having been dangerously ill with pneumonia. He reports arrangements being made for next fair, but says if racing bill at Albany passes, it will be a sad blow to poultry exhibitors as well as to exhibitors in other departments. The amount Poughkeepsie receives from the State is about \$4,000. Cut that out and there will be little doing on the fall circuit as every other county is interested as much as Dutchess County is.

The Hon. W. G. Minich, of Carlisle, Pa., otherwise known as "Hamburg Bill," informs us that a poultry association has been organized in his section to be known as the Great Central Poultry and Pet Stock Club. About one hundred members, the best fanciers in the eastern part of the State being enrolled. The first show will be held December 2d to 6th, 1906. As Bill puts it, "Other shows are invited to keep off our water wagon. We will run a strictly up-to-date fanciers show, the best bird wins here and your money is ready for you the last day of the show, the town is yours, the bar-rooms close at ten o'clock and don't have to keep off the grass while here, so come and have a good old time in a good old town in a good old way." This sounds good and should draw a big entry. Carlisle is a very centrally located place and should be a better show town than Harrisburg as far as attendance is concerned.

* * *

John Rumbold, Secretary of The American Light Brahma Club has his little hammer out for the Light Brahmas in the new Standard of Perfection, especially the hen. He writes: "She is right pretty to look at but don't answer the standard description of a female." There are others of the same opinion and we can never hope to get a sketch that will suit all breeders. Every one of the Standard illustrations can be criticised and some quite severely, no doubt. The writer of these notes had a good opportunity to note the many differing opinions existing among the fanciers regarding what constitutes a real correct type. The revision committee was not a harmonious body, neither was the publication committee. Hang a chicken on the wall and see how quick an argument will ensue.

* * *

Frank Beagle Zimmer is at his old tricks again. Said he belonged to the Down and Out Club as far as Bantams were concerned. Keeping only a few Polish and Black Reds. Now he sends over a large slice of Uncle Sam's greenbacks and orders a whole menagerie of Golden Silver Sebrights, Black Reds and Red Pyles. His White Polish Bantam crop of last year is the finest he ever raised and the short statured fancier in Gloversville, N. Y., has always had the star boarders in the Polish line. We just hope to see him make a good big entry at Madison Square Garden and astonish a few of us. It is many years since Deborahair yards were represented at the big shows.

* * *

Among our advertisers we find the A. D. Eaton Grain and Feed Company, Norwich, New York. We have known Mr. Eaton for a number of years and anything he goes into has got to be just right. That is why his feeds are right in every particular and the company is enjoying a great trade, especially in car load lots. Being a large concern they have facilities for handling all kinds of grain. It is a pleasure to recommend a mill of this kind.

* * *

Mr. and Mrs. J. Y. Bicknell celebrated the golden anniversary of their marriage at Buffalo, N. Y., recently. About two hundred invited guests and friends were present. Mr. Bicknell is one of the oldest and best known poultry judges in the United States and has been before the public as a breeder and fancier nearly as long as

the Sage of Natick, I. K. Felch, and this over fifty years.

* * *

Judge Rowland Story, the very famous Black Minorca breeder was a caller at The American Fancier office on several occasions and enjoys a chicken talk as much as ever. He is still in the United States Custom service, having recently been promoted to a most responsible position.

* * *

D. Lincoln Orr, Orr's Mills, N. Y., has turned over all his Light Brahma Bantams to his nephew and will breed only White and Columbian Wyandottes in the future. He reports over four hundred White Wyandottes out and quite a batch of Columbians.

* * *

April, May and June, except in very southerly portions of the country are the real sinicure pure months for the raising of chickens. It is the natural breeding season and with settled weather and good forage in field or woodland, the youngsters grow apace and require very little care compared with those that are necessarily housed much in the stormy days of March and February. It is a mistaken idea that the heavier breeds must be hatched very early in the year in order to get them ripe for the winter shows. We have known June hatched Cochins to show up better at late winter shows like Boston than some birds started in a cold country in March and even in February. We do not think there is much gained in hatching most asiatic varieties very early unless one wants them for an early fall show and the chances are they will not be what they like. Light Brahmas especially are slow to reach the show stage and personally we think it injures the breed or variety to show in an immature condition. Some of half-grown and gaunt looking Brahmas and Cochins we handle at fall fairs are not worth their entries fees.

* * *

We are in receipt of several letters containing complaints against certain advertisers. If readers who complain know how hard it is to judge the merits of a case at a distance they would stop and change their methods. Where deliberate fraud has been committed the testimony accompanied by an affidavit should be sent to us. This is a matter of protection. It is easy to rush into a libel suit, but not so easy to get out of it, even when in the right.

J. H. Drevensedt

Weight of Eggs Regulated by Law.

Hens in Iowa are hereafter expected to lay their eggs in uniform weight of two ounces each, for the Legislature has just passed a new Weights and Measures law which includes this important Iowa product. It provides that the standard weight of one dozen eggs shall be twenty-four ounces, and permits merchants to sell them by weight should they desire and the purchaser be willing to accept this method. No means of compromise is suggested in case twelve eggs overweigh the standard fixed. The new law gives standard weight to seventy articles, some of which never before had official weight in Iowa. These are beets, alfalfa, peanuts and canary seed.

LAY EGGS WITH HANDLES.

Jersey Man Evolves Race of Educated and Obliging Hens.

(N. Y. Tribune, March 12th).

Robert E. Foster, Jr., of Newton, Sussex County, has, it is reported here, succeeded in cultivating a race of chickens which produce eggs already fitted with handles for convenience in eating them. One exhibited to-day was taken from the nest of a White Leghorn hen. It is normal in size and general appearance, except that on the smaller end there is a continuance of the shell formation, measuring half an inch at its base, tapering for nearly two inches and ending in two points which resemble the tail of a fish.

The form of the excrescence is a curve, the smaller end resting near the middle of the shell of the egg and having a perfect resemblance to the handle of a teacup. The opposite side of the eggshell is flattened so that the structure will stand alone. The hens have laid seven eggs of similar conformation, each furnished with a well-defined handle.

Several weeks ago, while breaking an egg at the breakfast table, he conceived the idea than an eggshell with a handle, which would form its own cup, would not only save lots of dish-washing but would be at once a scientific and culinary triumph. Thereupon he caused the inside of the buildings where the hens are confined during the winter to be painted white. Food was taken to the hens in large, white vessels, each having one handle. Water was furnished in similar vessels of a smaller size.

Across the single window white teacups were suspended on strings. No other furnishings of any other shape was permitted to be around the buildings. The hens were nightly sung to sleep to the tune of drinking songs. Within ten days many of the eggs had slight excrescences on one end, and after two weeks the new eggs had definitely formed handles.

One notable incident apparently facilitated the experiment. Mr. Foster has a large white rooster which two weeks since escaped from his coop into a neighbor's yard. The neighbor's small son chased the rooster home and threw at him a broken white pitcher which had a large and conspicuous handle. The rooster was much frightened, and the hens witnessed the occurrence.

From that time there was a rapid development of handles on each successive laying of eggs, until the present almost perfect form was attained. The naturalist believed that fright and nervous shock accelerated the growth of the handles.

When the home market is supplied with the new and valuable acquisition Mr. Foster proposes to place some of the developed eggs under a hen. The result will be awaited with eager and scientific interest.

Hairy Chickens His Forte.

When the Secretary of Agriculture sent out his bulletin three years ago relating the result of the experiment in Southern California in raising featherless poultry, one of the first men in the country to take up the idea as a practically was Elias Blaisdell, a chicken farmer, who live about four miles north of Kankakee, Ill., and is accounted one of the most successful men in the business.

Blaisdell went into the scheme systematically, with a brood of five hundred, and at the end of eighteen months had produced and almost featherless breed, but on the body only. He could not reduce the size of the long pin-feathers of the wings, but stuck to the job for another year, increasing the strength of the heating food with each successive brood.

Now he has attained a most extraordinary result. He has sixty pullets which are not only without feathers on back or breast, but have sprouted a stiff, hairy coat, which makes them look like two-legged dogs with wings and beak. The hens act in the natural way and are cheerful, but the roosters in the flock are the most woebegone, shame-faced things that can be imagined. There is no fight in any one of them. They mope around the chicken yard all day as if ashamed of their partial nakedness and unnatural covering. Blaisdell says he will stop further experimentation, as it is too tedious to pluck out the hairs with tweezers, than to pluck the natural feather.

How to Judge Dogs.

The average man is greatly puzzled to find one dog awarded a first prize, and another, which to him appears to be quite as fine a specimen, awarded no prize at all. A man who knows the relative values of the different points in all breeds of dogs is a veritable walking encyclopedia.

Generally speaking, the best dog is one which comes nearest the standard of requirements for its own particular breed, about twenty-five per cent of the points being usually awarded for fine head proportions, an equal number for legs and feet, a similar number for body and color and the rest for symmetry.

In the Dalmatian, for instance, thirty points are given for color and markings, while head, eyes and ears have only fifteen; the bulldog, on the other hand, has forty-five for head and ears, while coat and color amount to but five points; the collie has twenty-five for coat, color being immaterial, and twenty-five for head and ears.

The St. Bernard has forty for head and ears, and five each for coat and color; the Pomeranian has but fifteen for head and ears, forty-five points going for coat, color and tail, with fifteen for appearance. It may be set down as governing in all breeds of dogs that whatever is the typical feature of that breed is the feature upon which stress is laid in the allotment of points.

IMPORTANT NOTICE!

Patrons should bear in mind that all accounts previous to March 1, 1906, are due to the Howard Publishing Co., No. 714 Twelfth Street, N. W., Washington, D. C. All accounts after that date are due to The American Fancier Printing and Publishing Co., Havemeyer Building, No. 26 Cortlandt Street, New York City.

Charles H. Brundage.

The above is a very good half-tone portrait of the energetic and hustling Secretary of the famous Danbury Show. Mr. Brundage makes his home at Danbury, in the State of Wooden Nutmegs, and is a past master as a breeder of Golden, White, Partridge and Columbian Wyandottes, and will from time to time write facts and fancies for The American Fancier.

Publishers' Announcement.

This issue of The American Fancier goes to press in a style quite unsatisfactory to those directly interested in its management. Editor Drevenstedt has been laid up with lumbago at his home in Red Bank, N. J., and is just able to get about some, so his good offices have been sadly missed. Then before it was too late to remedy the matter, it was found that our advertising matter was inundating the news columns, and, to top it all, after the first forms had been printed, a large news company contracted for two thousand copies to be placed on sale in New York City and the adjacent territory, so the forms had to be put to press again. This latter announcement will, of course, be good news to our friends, for it means that The American Fancier has taken hold in little old New York. So, with next week, we shall begin to run a twenty page paper, and as soon as a few more kinks are straightened out, readers, patrons and publishers will rejoice in a journal that will be put forth without an apology. Incidentally, it may be mentioned that another type-setting machine and a larger press have been ordered for the purpose of getting The American Fancier out so that it can be mailed early on Friday morning, thus enabling most of our readers getting their copy of the paper before church time on Sunday.

Robert T. Dennis

Secretary The American Fancier Co.

The statement that the poultry business is suited for invalids is often made. This is absurd, as it takes a man in good health to attend to his flock in all sorts of weather.

The demand for poultry and eggs is greater than the supply, and so long as this is the case the hard-working man or woman will reap the results while the indifferent fail.

Eggs of Various Fowls Much Alike.

(Saturday Evening Post.)

The white of an egg is nearly seven-eighths water, the balance being pure albumen. The yolk is slightly less than one-half water. These figures apply approximately to the eggs of turkeys, hens, geese, ducks and guinea-fowls.

To show how nearly alike the eggs of various domestic fowls are in respect to composition, the following figures are given by the Department of Agriculture:

Hen's egg—50 per cent water, 16 per cent "protein," 33 per cent fat.

Duck's egg—46 per cent water, 17 per cent "protein," 36 per cent fat.

Goose egg—44 per cent water, 19 per cent "protein," 36 per cent fat.

Turkey egg—48 per cent water, 18 per cent "protein," 33 per cent fat.

It should be explained that "protein" is the stuff that goes to make muscle and blood. Fat, of course, is fuel for running the body-machine. Thus it will be seen that eggs, though half, or nearly half, water, are extremely nutritious, containing all the elements required for the building and support of the human body. But the old saying that an egg contains as much nutriment as a pound of beefsteak is far from correct. It would be nearer the fact to estimate a pound of eggs as equal to a pound of lean beefsteak in nourishing power.

World's Largest Incubator.

Some of the unique methods used to hatch 15,000 eggs at a time are interestingly described as follows:

A novel feature is that the heat of the eggs is regulated by raising or lowering them in the egg chamber, which is nearly a foot high inside, burlap separating it from the pipes. It is well known that as the process of hatching advances the animal heat in the eggs becomes greater, requiring in oil heated incubators a lowering of the temperature of the air supplied. In each compartment is a double glazed window, so that the thermometer may be read without opening the door. The egg trays rest on double frames, hinged by galvanized arms or levers. As the chicks develop the trays are lowered on these supports, the first drop being made in six days, and others at intervals, until, on the twenty-first day, the trays are resting on the bottoms of the chambers. All infertile eggs are tested out on the seventh day.—Technical World Magazine.

Pigeon Farm.

Nowhere in the world, in all probability, can so many tame pigeons be seen in the air as on the pigeon farm, or ranch, which is to be found near Los Angeles, in Southern California. This part of the world is especially favorable for pigeon rearing. They have few natural enemies, hawks being very scarce, while the perpetual summer is an important factor. The farm covers about eight acres of sandy, gravelly soil, and there is an abundant supply of fresh water. Fifteen thousand birds fairly cover the ground and lofts, so that at times, from a distance, it appears as though some of the snow from the neighboring mountains had been dropped upon the roofs. The increase of this gigantic flock is enormous, but the demand is better than the supply, and forty thousand pigeons are sent to market each year.

Our Washington Representative.

We have appointed Harry H. Collier, Tacoma, Washington, as our agent for the State of Washington, for both advertising and subscriptions. Harry H. Collier is one of the best known fanciers in that far Northwestern state. He was formerly publisher of the Pacific Poultryman, and has judged many of the leading poultry shows on the Pacific coast.

NEW YORK CITY MARKETS.

EGGS—Receipts for the week, 93,285 cases. The closing was characterized by a further decline of $\frac{1}{4}$ c per dozen on all grades of western eggs, and the elimination of quotations on refrigerators. The demand was extremely active under call of the exchange, buyers for all accounts stocking up freely for Lenten requirements.

The weather, so favorable to high fertility all winter has suddenly changed from on extreme to the other. What the snows and almost unbearable cold will do to early-hatched chicks will be a plenty. Not only this, but the laying hens have received a check and the fertility of eggs will be impaired.

About as lonesome a sight as one can see, is an out-door brooder just showing from under a snow bank.

With an incubator ready to hatch and no warm weather in sight, I have been compelled to rebuild a portion of the long brooder house which, until last season has stood here, a monument to the hot water pipe system and the Hammon-ton Brooder boom.

I think I have improved the shape of the house, which is 40 feet long, 7 feet 6 inches wide, 6 feet high at rear and 4 feet high in front, a board 10 inches wide runs along the bottom at the front, and one 4 inches wide at the top, on these a roll of muslin the length of the house.

In this I have a cheap, warm house, and my chicks will be protected until the warm weather comes.

After trying to set two hens on some choice eggs, I can easily understand why the old Egyptian of the B. C. period built his incubator ovens.

There is more cussedness and meanness in a setting hen than anything else of her size.

My houses with muslin covered windows, doors and sheds, are being the least affected from the compulsory confinement imposed upon their occupants by the snow.

I notice the egg market was two cents a dozen higher last year than this, while in 1904, the price was exactly the same as now. In February, 1905, we enjoyed a 34c market against 22c and 24c this year.

I also note The American Fancier's announcement that owing to their New York location the market conditions will receive attention. I hope they will also preach higher prices for henry eggs, and canvass the city to get the name of every egg seller who does, or is willing to pay more than the market price for such eggs.

Should the readers of the Fancier be in the city for the purpose of finding a customer for his eggs, his chance of doing so would be greatly increased.

I have often noticed the variations in the capacity for food disposed and habits of the different varieties of fowls, when housed under the same roof.

Some breeds will consume twice the amount of feed while producing a like number of eggs, take the Minorca for example, their eggs are large and it stands to reason they must eat hearty to produce an egg of such large size every day, or every other day.

The Brahma lays a small egg for the size of bird itself, and cannot be

WHITE WYANDOTTE EGGS - \$2.00 per 15

WALTER McEWAN, Lauderdale Farm, Londonville, N. Y., Albany Co.

classed as a gourmand, a reasonable feed will make a pretty decent layer out of a Brahma.

Twenty Leghorn pullets will live well on what would be a sort of side dish for fifteen Plymouth Rock hens, the danger line is not reached in a laying Rock hen until she shows signs of breaking down behind. We have here in this town a flock of Rocks before which the grain is never absent, they are fat enough for market yet having free range, it may be said to have been worked on they all lay nearly every day, in fact, I think I have heard the owner say that from a flock of twenty there hasn't been a dag in a year that at least one egg has not been laid, so it is safe to say the feeder must be his own judge as to quantity, and he must also discriminate between the breeds.

Great Central Poultry Association.

The following are the officers of the Great Central Poultry Association, of Carlisle, Pa.: President, W. P. Philippy, Carlisle; Secretary, T. W. DeLancey, Carlisle; Treasurer, George W. Hoffman, Carlisle; Vice-Presidents, W. H. Hess, Fayetteville; Edward Shennabrook, Chambersburg; George W. Keller, Hummelstown, George F. Miller, New Kingston; Augustus D. Arnold, Dillsburg; William F. Jones, York; J. L. Purple, Columbia; H. A. Emmel, Mars; E. W. Gaiter, Mount Joy; W. C. Miller, Carlisle. Executive Committee, Dr. W. T. Philippy, F. W. DeLancey, George L. Hoffman, Charles T. Cornman, Edward Shennabrook, George F. Miller, Frank Speck, William G. Minnich. Superintendent, E. E. Eckel, Chambersburg, Pa. Judges, William G. Minnich, Charles T. Cornman; dogs, Thomas Turner, Baltimore, Md.

Advertising Defined.

The ad. is the egg, the paper the incubator, the inquiry from the reader the chick, the office receiving the inquiry the brooder. If the brooder is not prepared to receive and properly care for the chick it will die. If the office is not equipped and the office force incompetent or unequal to the proper handling of the inquiry, it will die, and all the effort and expense of preparing and publishing the advertisement will be lost. Look well to your inquiries. The success of failure of your advertising campaign depends very largely upon your doing this.

Combinations With Poultry.

Don't put all your eggs in one basket. Poultry keeping pays when managed right, but many a poultry keeper would make more money by keeping less poultry, and developing some of the other resources of his situation. The day of intensive poultry culture is passing—for most of us. There is room enough in this great country to keep hens with more room per hen and less labor per man required per dollar of net receipts. Study your situation and see what you can make out of it.

Otsellic Farm

WHITNEY'S POINT, - N. Y.

ESTABLISHED 18 8

I can furnish you anything for the show. Ornamental or general utility purposes in Poultry, Pigeons, Rabbits, Cavies or Guinea Pigs, Pheasants, Guinea Fowl, Pea Fowl, Ornamental and Wild Water Fowl, Swans, Etc. Stock for sale at all times; write me your wants.

Eggs for hatching, \$.00 for 15; \$3.00 for 50; \$5.00 for 100; from good stock, each bred on a separate farm with full and unlimited range—no other fowl on each farm excepting the one breed. This means eggs are the kind you order—a big percentage of fertility and strong, healthy chicks. As to quality, none better at any price. Eggs from the following varieties: White Wyandottes; Barred, Buff and White Plymouth Rocks; White Langshans; Anconas; Rose Comb Brown, Rose Comb White and Single Comb White Leghorns; White and Black Minorcas and Brahma Bantams.

Duck eggs, \$2.00 for 11, from Colored Muscovys, Pekin and Indian Runners.

All eggs guaranteed fresh laid, true to variety ordered, a fair percentage fertile and packed in best possible manner, so they are sure to arrive in good condition.

GARDNER & DUNNING'S

Barred Plymouth Rocks again sweep the decks at Madison Square Garden

In the greatest class ever seen in the show-room, we won twice as many FIRST and SECOND PRIZES as any other exhibitor: NATIONAL CLUB CUP for best cock, hen, cockerel and pullet; and the \$25.00 GOLD SPECIAL for best display. Catalogue and 1906 mating list tell all about it. T-F-E-O-W

GARDNER & DUNNING,

Auburn, N. Y.

Young's Strain S. C. W. Leghorns

I HAVE NO OTHER BREEDS

My strain again for the sixth consecutive year shows its superiority by winning more prizes at Madison Square Garden, New York, in the strongest competition ever known, than all others combined, including 17 specials, and again winning the National S. C. W. Leghorn silver cup. Two weeks later I almost duplicated my wonderful win of last year at Boston by winning 9 prizes on 9 entries against the most prominent breeders of the east. My winnings for 1906 at the world's two greatest shows are as follows:

BOSTON
Pen—1st.
Pullets—4th.
Hens—st., 4th.
Cockerels—1st, 2nd.
Cocks—1st, 2nd.

NEW YORK
Pen—4th.
Pullets—1st., 2nd, 5th.
Hens—2nd.
Cockerels—1st., 4th.
Cocks—1st., 3rd., 4th.

THIS RECORD has never been equalled by any other Leghorn breeder in America. Stock and eggs for sale at all times. 1906 mating list free

At the New York State Fair, Syracuse, N.Y.

Martin's White Wyandottes won more prizes than any other exhibitor. First and 3rd cockerel, 1st and 3rd pullet, 2nd cock, 2nd hen and 2nd pen. This was a most remarkable win, owing to the fact that previous to this show they had been cooped nearly two weeks at the Toronto show, and thus were not in as good condition as the birds they competed with. Finest lot of Stay-White Cockerels I ever bred. Send for catalogue.

Beauty and Usefulness of Hamburgs

BY AN OLD TIMER

We have heard a great deal of late about the Hamburg, but now that the large body of the admirers of the old and beautiful breed are united again for another effort we shall probably hear more about it than before. I hope so. For all the beautiful fowls we have, undoubtedly the Hamburg is the most beautiful. It has been said that no other product of poultry breeding skill has ever elicited the genuine admiration that a gold or silver penciled pullet of modern days, or a silver penciled cockerel of high quality invariably does to all and sundry who come across them. Let an outsider, who has never seen such birds before go round a Poultry show and select the most beautiful fowl, and he will invariably select the Hamburg. He cannot help doing so. Some birds approach them in appearance but fail in some one great point, which makes all the difference.

Take the Black Hamburg and the Black Minorca for instance. In many respects they are alike. Their color is black, their shape and size somewhat similar, but what a difference in head! Of course, the admirer of the Minorca, wedded to a large, beefy single comb, can see nothing but beauty in it, and the more the comb of the hen hangs in a large, flabby looking, apparently torn mass over one side of her face, completely blocking out the use of one eye, the more he may be genuinely delighted. But he has become wedded to such, not from a sense of beauty, but from a sense that, in that particular breed such and such a point approaches the ideal standard point desired. His taste is acquired, not spontaneously natural. It is like the taste for tea, beer, cider, claret, etc. We don't like them first time tasting, but we get used to them. By and bye, we become connoisseurs of them, till finally we want them of exaggerated delicacy, exquisite aroma, and so forth.

But that is no guide as to what our unacquired, natural inclination towards them are. Even so of the head-piece of the Minorca, Leghorn and so on. But a beautiful Rosecomb, well worked, with a long leader, appeals, when combined with an immaculate ear lobe, to the non-fancier as pleasing. The shape, carriage, and style of the Hamburg generally will also appeal strongly to the non-fancier. The plentitude of its feathering, the sweep and carriage of its tail, the beautiful glossy of green surpassing that of other fowls, save and except the black Sumatra Game Fowl, are all things lovely, but when exquisite markings, lovely lacing, or bold spangling, on

the fairest or richest of grounds, is added thereto the tout ensemble is bewitching, irresistible, and, in spite of himself, the non-fancier is drawn thereto.

This is no chimera, no mere expression written with a view to flatter the Hamburg. It is the genuine truth. Put a first-class Ancona Cockerel, a Black Minorca, a colored Leghorn, a Houdan, a Lakenvelder, Andalusian, Laced Wyandotte, or any other fowl, having any pretensions to symmetry, style, grace, color, or markings together, and bring into the competition a Black Hamburg, a Silver Spangled and Silver penciled, and ask the general public to single out the three most attractive fowls, and there is little or no doubt that the verdict would be for the three Hamburgs against the whole lot, by 90 per cent. of those making the choice. The Hamburgs of late years have undoubtedly had to take a back seat, but this was by no means due to their lack of precedence of beauty. Sundry causes brought it about. The market was cornered by half a dozen speculative men; and this cornering immensely benefited a few of the cleverest breeders, who found a first-class market, tip-top prices, for their A1 birds. But it did not benefit the Hamburg community at large.

It was on the same lines as the Russian bureaucracy now. The Czar, the Grand Dukes, the Dowager Empress mother, a few grandees generally may live a life of despotic affluence and luxury, but the great mass is never contented with such an arrangement, and seething cauldrons below soon begin to manifest their ferment, and trouble sooner or later is in store. So Hamburg men became malcontents not with the beauty of their favorites, nor with their usefulness, but with the selfishness of the few that would grasp and grab for that which should reasonably have been distributed among the many. Therefore they sought an outlet in other breeds.

Another factor militating against it was that which sooner or later militates against every breed. Men start in their young days, when full of headstrong fire and spirit, and the thing is a real hobby, pleasure and pastime to them. They care not if they waste a bit of money over it. Full of the "jeu d'esprit" of winning, beating their neighbors, climbing up and up, and making a name, glorying the meanwhile in the cups, plate, etc., which are growing in number on the sideboard of their dining room, they are almost prodigal and reckless whilst youth lasts. But by the time

they have made a name age has crept on, and with age comes loss of that impetuous fire which caused unheeded expenditure. A soberer state takes the place of the former heat. Family calls make it imperative that the hobby shall pay its way. By and bye, it is seen that there is money in it. Then the sordid spirit works. The hobby gives way gradually to the commercial enterprise, and the last state of things in one sense, is much worse than the first. Then it is a hand to hand fight with everybody, on money lines mostly. Finally, as time works on, the greedy, grasping spirit is found here and there. It is a matter of one's living. Sharp practices enter in, and every nerve is strained to win the day. The high morality which once may have governed the thing perchance has been blotted out; every man becomes suspicious of his neighbor, and rightly, too. For soon the thoroughly earnest worker finds that he has no chance whatever against the skillful manipulator. That the breeding cannot keep pace with the faking becomes an assured fact. In disgust the man of small power or of honest intentions throws up the breeding, and either takes to a new variety, or out of the Fancy altogether.

This is not too vivid a picture of what often takes place with all breeds. Added to this, the greater the perfection of the Fancy points in a fowl, and the greater the danger that by injudicious mating, and ignorance of line breeding, the general usefulness of the breed has become impaired to the general farmer, and others who would like to keep fowls for utility purposes.

But one can hardly say that this has happened with Hamburgs. It is commonly said of them, by those who have an interest in other breeds, that this actually has been the case. But in reality this is not so. The birds in some varieties are a little smaller, but weight for weight with the food they eat there is not a breed of fowls at the present moment so remunerative in the matter of egg production as the Hamburg. When Blacks will lay, as the writer can testify, eight eggs weighing nineteen and three-quarter ounces, the weight of the first grade Dutch eggs (and few of them at that), imported into this country, there can, indeed, be no cause for grumbling. The writer does not believe for a single moment the statement he saw in the Fancy Press a week or so ago—a general assumption that the first few pullets' eggs in a laying competition of mixed varieties being about two ounces, we may confidently ex-

pect these pullets in a few weeks time to run the weight of their eggs to twenty ounces for the eight, that is to say two and a quarter ounces each.

Such statements are only random ones. I have weighed eggs all my life, and the Blacks, in question, were exceptional, and almost beyond belief. It is all very well to add a note when one is weighing eggs, that amongst eight there was an abnormal egg of three or nearly four ounces. The fact is, that our very best of all eggs will seldom reach twenty ounces for eight and rarely or never exceed it, except in the case of an unhealthy double yolked, or double shelled specimen. Now, if the Black Hamburg, with all its in-breeding, and all its lovely high quality show characteristics, can be made to produce the very best in the matter of eggs, there is no reason that on this point of egg production, it should take a back seat.

The penciled varieties, Dutch-every-day Layers, Chittreps, as they are variously called, will lay for nearly nine months, sometimes ten or fifteen days without a break. They go on week after week in an incredible fashion, filling up scores and scores of eggs, and never want to sit. This is important, because where a bird is of a broody nature it stands to reason that some three or four months of the year she is busy with maternal duties, where our Hamburg is steadily laying all the time. They are birds that will lay in the depth of winter, in the bleakest of places. Everyone must admit that Scotland, being further north than England, must be colder, wilder, more exposed, and bleaker in winter than we are. Yet Scotland is one of the great strongholds of the Hamburg. Out of Scotland come some of our grandest and best specimens, got up, too, in time for our great South-country shows, the Palace and International.

Let no one conceive that the Hamburg is a delicate fowl. If it be properly reared, and there is a whole world of meaning in the word properly, the Hamburg is quite hardy, will live under wild climatic conditions, housed through the winter in a thick evergreen bush; and what other fowl is hardier than that? So that, putting everything together, its extreme beauty, its extreme usefulness, its hardy constitution, if properly dealt with, it appeals with no uncertain voice to all who wish to keep the most lovely and beautiful of all fowls. Hence, men have stuck to it, through thick and thin, through prosperous and through darkened times. Remove the monopoly which a few breeders

have over it; give all breeders a chance of success alike, and all will go well. The fowl is irresistible. It cannot fail.

DATES CLAIMED.

Under this heading there will appear each week a list of all the shows claiming dates for the coming season. Secretaries of poultry, pigeon and pet stock exhibitions will confer a favor by sending in the dates selected as promptly as possible. It is not only a convenience and guide to secretaries of shows that have not selected their dates, but of great interest to readers of *The American Fancier*, a majority of whom are exhibitors.

The name of secretary and judges will be appreciated when sending in notices.

Aug. 21-24—Cortlandt, N. Y. Cortlandt County Agricultural Society, W. J. Greenman, Secretary.
Nov. 12-17—Houston, Tex., Hewey S. Fox, Jr., Secretary.

A. P. A. to Meet at Auburn, N. Y.

(Special to *The American Fancier*).

Beaver, Pa., April 3, 1906.—The mail vote upon the question of designating the next meeting place of The American Poultry Association resulted as follows:

Auburn, N. Y. 65
New York City. 43
Fort Wayne, Ind. 2
Not voting 10

T. E. ORR, Sec'y.

Our Washington Representative.

We have appointed Harry H. Collier, Tacoma, Washington, as our agent for the State of Washington, for both advertising and subscriptions. Harry H. Collier is one of the best known fanciers in that far Northwestern state. He was formerly publisher of the *Pacific Poultryman*, and has judged many of the leading poultry shows on the Pacific coast.

For results, advertise all the time.

PIGEON PRATTLE

BY C. A. HOUSE

With the advent of the month of St. Valentine, the thoughts of most fanciers are turned towards the all important work of the breeding season. Even those who do not believe in early breeding must begin to put their house or houses in order. This putting of the house in order is far more important than many think. It would be folly for me to say pigeons cannot be bred unless the loft undergoes a thorough turn out and cleansing, because I have myself seen pigeons breeding in lofts which for filth and unsanitary conditions quite equalled any pig-stye. I have even heard it argued that pigeons do better when the house is only cleaned out once a year. Now I like to serve my birds as I serve myself, and I firmly believe that what is good for a man is good for his beast likewise. If cleanliness is next to godliness then let it be practiced all round.

The first step in preparation for the breeding season is to thoroughly overhaul and turn out the loft. If one has only one loft the birds must all be caught and given a day in the baskets whilst their master proceeds to do his spring cleaning. If there is more than one house available, then remove the birds from one house to another. This done strip the inside of the house or loft completely of all fixtures and fittings. Then brush and scrub the walls to your hearts content, but let it be a dry scrub. It is the height of folly to at this time of the year saturate the walls with whitewash.

Outside buildings, be they of stone, brick, or wood, are none too dry at this time, and to make them worse by putting a lot of wet whitewash on walls is worse than foolishness—it is simply tempting providence to provide a crop of colds, roup, etc., amongst the stock. The walls should be first swept with an ordinary household broom, then given a dry scrub with a scrubbing brush, and a bucket of sawdust. If they are gone over carefully and thoroughly little dirt will be left and a sweet, pleasant smell pervade the atmosphere. If the walls are painted or dressed with Hall's Sanitary Distemper Wash, a most admirable preparation, then they may, of course, be washed down with a flannel and a bucket of warm water, care being taken to wipe them thoroughly with a dry cloth. All perches, or other fittings should be given a good scraping and dry scrubbing, ere being returned to the loft. Don't wash them. Damp perches may easily give some of your best birds cramp or rheumatism.

The mating of a stud of birds is a matter of considerable difficulty to the young fancier, and very often one has not only to consider the outward and visible points of each pair mated, but also their family history. Pedigree plays a great part in the success or failure of a stud, and no man can be continuously and permanently successful who ignores the family history of the stock he is dealing with. It is no use pairing a fine stout headed owl to a hen which fails in skull properties unless you know of a certainty that he

come from a family of big headed birds. On the other hand, with a knowledge of their pedigrees it is quite possible to put together two moderate headed birds and produce from them something which shall excel in skull properties.

To the true fancier the breeding season with its anticipations, its disappointments, and its joyous realizations is much the most interesting period of the year. There is a fascination about the breeding season that no other season provides, a fascination which increases as the years roll on and success is attained. As I have often said, my notes are written principally for the young hands, those new recruits who are ever joining our ranks, some to attain to fame and notoriety on the show bench, others to flourish for a time and then drop out of our ranks because success does not attend their efforts. This should not be. No man having once put his hand to the plough should look back. Failure in the fancy is nine times out of ten the result of a wrong commencement. He who would fain be known as a breeder of birds capable of winning firsts and specials at the Palace and other big events, often goes to the Palace and buys a number of first prize winners, pairs them together, foolishly thinking he will breed something sensational. He does, but it is not sensational in the right direction. It is worth about as many pence as the parents are worth pounds. He is disappointed, but being a man of pluck and grit, he has another try. He buys some more winners, pairs them up, and the result is as before. He begins to think he has been had in some way, that the birds he bought were not naturally as good as they looked, but although discouraged, he has another try—result again the same. He becomes disgusted and gives up what should have been, and what he hoped would prove a pleasurable and profitable hobby.

Our young hand went wrong in two ways. He started wrong by buying indiscriminately a number of good birds and pairing them together irrespective of their family history. Yet even his first wrong step might have been remedied had he kept the young bred the first season and paired some back to their parents, and others to their brothers and sisters. A moment's thought would have told him that, although his champions had not reproduced their own excellencies in their young, that those excellencies must of necessity be in the blood, and therefore the only way to fetch them out was to work them up together in the manner I have indicated. The bringing in of a lot more alien blood would only tend to make confusion worse confounded. Yet ninety-nine times out of a hundred this is what the novice does.

The advice I would give all new hands is not to go buying up all the best birds in the land, but to go to our most successful breeder and purchase from him as many good birds as

you possibly can, and when buying the birds ask for his assistance in mating them. Throw yourself on his honor and sportsmanship, and you will not repent of it. Then, if possible, obtain his further assistance the next season in the selection of your breeding stock and the mating up of the birds you have bred. As an illustration of how not to do it, and how to do it, I will give an experience of my own.

Some years ago a certain fancier purchased some big winners of mine. He paired them together on their show performances, and would not listen to the advice I gave him, which advice was based upon the knowledge I possessed of their family history. The result was that from birds costing over £20 each, he bred nothing worth 20s. In the next season he followed my advice, and mated his birds exactly as I told him, and had the pleasure of standing 1st, 2nd and 3rd in one class at the Dairy show, the first time his young birds made their appearance. But what was even more pleasurable and gave him greater satisfaction, was the knowledge that the best of my season's produce stood behind him. From this little incident my young readers will grasp the truth of the argument that he who would be consistently and continually successful as a breeder of live stock, must study pedigree, and not be carried away by outward good looks. Commoners occasionally throw a child of beauty, but such has not the power to perpetuate its form and visage. But more of this in my next.—Pigeons and Poultry, England.

IN MY BACK YARD.

After spending last winter in the South, I came up North again and started looking for a house. Luckily I was able to get one with a fine chicken house on the property, and a yard 50 x 205 feet. As soon as I saw that chicken house, I started looking for some chickens, and bought eight White Leghorn pullets and a cockerel. I also sent to a noted breeder and bought three settings of Buff Rock eggs. In the meantime I had been saving my Leghorn eggs, and when the Rock eggs arrived, I set three hens on the Buff Rock eggs and five hens on White Leghorn eggs, the eggs hatching June 25th.

From the Rock eggs I raised thirteen chickens, and from the Leghorn eggs twenty-five. After killing the cockerels I had seven Buff Rock pullets and twelve White Leghorn pullets.

The Buffs started laying Christmas Day and the Leghorns January 29. Now the point is this, Leghorns supposed to mature and lay sooner than Rocks, but in my case it hasn't been so, and at the present writing, March 19, the seven Buff Rock Pullets are laying one-third more eggs than the twelve Leghorn pullets. This article is not written to get up a controversy regarding the respective merits of the two breeds but is simply a statement of facts from a beginner's experience. "HUTCH."

IMPORTANT NOTICE!

Patrons should bear in mind that all accounts previous to March 1, 1906, are due to the Howard Publishing Co., No. 714 Twelfth Street, N. W., Washington, D. C. All accounts after that date are due to The American Fancier Printing and Publishing Co., Havemeyer Building, No. 26 Cortl Street, New York City.

NEW YORK CITY MARKETS.

EGGS—Receipts for the week, 106,916 cases; since March 1, 391,197 cases. The closing was characterized by an advance of 1c per dozen in all grades of western eggs.

Worth Remembering

That the man who is a real success as a raiser of live stock, be it horses, hogs, hens or hounds, is the man who attends to all the most insignificant details. The man who studies the habits and dispositions and temperaments of each individual under his care.

That no sort of live stock will thrive as a whole that are kept and fed in groups, flocks or crowds, unless such groups are, or have been, assorted and graded, and are of the same size, temperament, tastes and dispositions, each individual, the mild tempered, quiet, together; the dainty and delicate together; the nervous and "scary" together; and the ravenous and gluttonous together; and even then the smaller the group the better the stock will prosper.

That haphazard methods in caring for stock cannot be too strenuously condemned, a feast one day and a famine the next, cannot be practiced with any success. On the contrary, nothing but failure comes from such methods. As has been said, each individual must be studied. The amount of food sufficient for one may not be enough to keep another of the same age and size thriving, and be enough in another case, to harm another of same age and size; and a care taker who cannot perceive these differences is incompetent and a failure.

That regularity in feeding and caring for any sort of stock is next in importance to good wholesome food, and the correct amount to be given. The trustworthy attendant, the man whose stock is always looking well and doing well, the man who is constantly producing specimens above the ordinary, is not, nor never was, the man who devotes half of the night in the bar-room, nor half of his days playing the races.

That the care, management, knowledge of, and selection of the most desirable blood lines, and the scientific mating and breeding of any variety or branch of live stock is a work of a great many parts, and that, as yet, we are struggling with Vol. 1, No. 1. That some particular branches are in advance of others is admitted. That some breeders are better versed and have a clearer insight into the art of breeding their specialties than others, will not be denied. Yet, none of us are farther than the primary department; and none of us living, or for many generations yet to come, will graduate with 100 points to their credit.

That the breeding of an occasional extraordinary specimen is commendable, and something to take pride in; but that, unless we can continue on with specimens of this sort, is conclusive proof that we are not yet "on to" the secrets of breeding, the conditions, environments, and mingling of the proper blood lines, at the proper time, that produced this grand result. Have not learned our lesson perfect, and are not in control of the proper knowledge.

That, the breeder whose flock, herd, or breeding stud, or rather the young produced are a level lot, above the ordinary, is considerably farther advanced on the right road to success,

than the man who produced the one extraordinary specimen, and the balance of his output were of as many different grades as he had specimens. The one method proves careless breeding, a lack of knowledge, simply a happen-stance, luck, as some would call it, but which is something we do not believe in. The other, proves the breeder a thinker, and on the right road, and only time is needed, and an absence of mistakes and he is "a comer."

That a good start in breeding live stock, be it horses, hounds, hares or hens is a gigantic stride toward success in breeding. By a good start we mean the selection of good specimens, particularly specimens from a line of producers. The accidentally bred good one is not to be depended on as a producer of good ones, far oftener the results in breeding from such a specimen are very unsatisfactory.

That, two or three really prime specimens to start with, is of far more value and a much quicker road to success and glory than twenty or more of an indifferent class.

That, one of the most important factors in a successful breeding establishment is valuable dams. Two much attention cannot be given this matter. Dams good in type, good in qualities desired in the breed, by the latter expression we mean this, if trotters are your aim, see that the dam, besides having good form, has speed, was bred from a dam with speed, etc; if hounds is what you intend to breed see that the dam is good in typical points, and is a hunter, and bred from a dam that is a hunter. If hens is your choice and you want eggs, see that the dam is from a laying strain, and you can by judicious mating carry along these desired qualities indefinitely, and besides can intensify them, and keep on developing them until the goal, perfection, is reached.

That, after getting such desired qualities bred in your strain, it is comparatively easy sailing to keep annually producing specimens strong in these points, and all specimens produced during a season's breeding will be above the average in these qualities.

That, one of the greatest troubles with Americans who wish to start a breeding establishment of any sort is this, he wants to rush, that's American. He has room, he figures, for so many horses, or hounds, or hens, whatever line he intends to take up, and therefore he mates the full number to start with. Such an idea is "dead wrong." If he persists, as he generally does, he must buy what other breeders are offering for sale. Why are they on the market? If the experienced breeder has no use for them in his collection of breeders, what can the new man, the amateur, expect to breed from them?

That, you had better make haste slowly, stop and think. It will not harm your head so much to think as it will your breeding interests to rush. Better visit the popular stables, kennels or poultry farms, ask questions and prices. When you strike a dam

that the owner tells you is not for sale, that is the one you want for a foundation. Stick a pin here, and buy her if you can possibly induce her owner to set a price on her. Better have one such dam that a score of "cast-offs."

That, you must use sense (the common sort will do) in buying, even after getting advised as above. If it is sentiment that causes an owner to refuse to sell a certain specimen, it then should carry no particular weight, as for instance, "because it is a pet of his wife, daughter, etc.," but, if for the reason that she breeds good youngsters, and is of too much value to his stable, or kennel, I repeat, buy her, if it takes half of what you have laid aside to purchase ten with. You will get on top with the best ten times as quickly by so doing.

D. E. B. O'NAIR.

THE BROWN LEGHORN.

When, How and By Whom First Introduced.

In the fall of 1852, Captain Isaac D. Gates, deceased, of Mystic, Conn., sail from New York in the Barge, Asa Fish, for the Mediterranean for a cargo of fruit. Having obtained his cargo he put into the port of Leghorn to procure his stores for the homeward passage. He gave his steward, John Weller (now living at Mystic, Conn.) orders to purchase a crate of fowls to supply the cabin table. When the crate came on board, Weller separated the cockerels from the pullets, intending to kill the cockerels first. But before the first crate was depopulated, the pullets in the other crate commenced laying. This being reported to the captain, he told Weller to feed them well and not kill any of the layers. This just suited Weller, and he spared no pains to provide them with the best the vessel's larder afforded, and when the vessel arrived in New York Captain Gates sent the birds to his wife at Mystic. I saw them when they came, and shall never forget their unique appearance. Their massive scarlet combs hanging pendent, some on one side and some movements, their peculiar but uniform color, their characteristics as perpetual layers and non-setters, attracted crowds of the curious.

The fancy poultry business was then in its infancy and to intimate that you considered your hens superior to your neighbors, and that you would not swap eggs even, was but to put yourself in a position to know what your neighbors thought of you and your hens. But George D. Burrows, deceased, and John Jeneson, then principal of the Mystic River Academy, and now living at Norwich, Conn., obtained some of the birds from Mrs. Gates, and set themselves up in the business. In their hands they proved to be the eighth wonder, and soon the hen fever became as prevalent and as catching as the measles. I caught it with the rest and have had it ever since.

But the Leghorn of 1853 would be a sorry looking bird in the show room of to-day. In color they were a dirty brown, the neck and hackle feathers in many instances quite dark, while the breast was wholly wanting in that round, fullness and the marking which an intermingling of the Partridge Cochin blood has given to the modern bird. The size, form, fine feather markings and white ear lobes are all American prefixes and add more to the beauty than to the utility of the "Old Brown Leghorn."

Weed's Wanderings

Our first visit this morning was to the yards of George E. McLaughlin, who has a beautiful location. George has met, right in the commencement, what so many new men in the business meets with, and that is dishonest advertisers—but George is getting there just the same. In continuing our journey, we met Wm. R. M. Dowd, with his good horse "Jock." (By the way, if I were writing of horses instead of poultry, I would give "Jock" a full page at least.) Mr. Dowd takes me in for a ride to Tyringham. This beautiful little hamlet is snuggled away in a valley of the Berkshires, and is getting to be a place of no small note, for here we find the summer home of Editor Gilder, of the Century magazine, also Mark Twain spent part of last summer here, and Grover Cleveland came with his family to enjoy nature as she is found in these grand hills.

We meet with some "not at home" people, which is rather discouraging, 'till we arrive at the home of Clarence W. Hale, and here we have the pleasure of looking over some ribbon winners. White Wyandottes and Barred Plymouth Rocks are the varieties that Mr. Hale is giving his attention to, and after seeing his new incubator room—where two machines are doing fine work—we bid Mr. Hale good-by. With another "not at home" call we start for home. My, what a politician "Jock" would make. He is such a natural mud thrower. At night we start for Pittsfield to attend a meeting of the Pittsfield Poultry Association, who already have plans laid for their next winter's show, to be shown in Empire Coops, and we think under the comparison system. Here we had a heart to heart talk with H. G. Oles, who thinks that the acme of all poultryry is to be found in the Columbian Wyandotte. I have had the pleasure of handling Mr. Oles' birds at several shows this last winter and can honestly say that he has as good stock as money can buy, and keeps them in fine condition.

We take time while in Lee to visit the yards of F. K. Chaffee. S. C. Brown Leghorns are the Doctor's choice and his winnings at the shows here proves that he has the goods. Thence again to Pittsfield to meet Mr. N. C. Messer, the hard-worked ex-secretary of the late Pittsfield show. W. P. Rocks, and birds fit to compete in any company, are here seen. Mjr. Messer certainly knows and owns some good birds. And now North Adams will be our next visiting place. Here last winter was held a very successful show, paying all bills and also paying \$150 on their coops. Here we meet Mr. H. W. Frame, of Stamford, Vt., who is starting with the best obtainable, buying the first prize pen of White Wyandottes at the North Adams show. His Red's are of the same high merit and his L. B. Bants were purchased direct from the leading breeder of this variety in the country. A short walk brought us to the home of Mr. C. A. Larabee, Assistant Postmaster, who

has two grand pens of White Wyandottes. Thence to the Notch Road, where C. M. Ottman has a beautiful home, his Buff P. Rocks and winners of blue ribbons show their quality, thence up the hill to Mr. A. Whitney, who has just rented a large poultry plant. Al. is "on the force," and with four dear little tots in the house, and with some 200 pure bred White and Buff Wyandottes, I can see a busy time for him this summer.

Next—we go to the farm of T. C. Brown. Mr. Brown is a living illustration of what pure out-door air will do for a man. It is not so long ago that he held a good position in one of the large stores; yes, a good position, but poor health made Mr. Brown realize that there must be a change made. So this pale and emaciated counter-jumper, gets a farm in the near vicinity, commences to serve the people of North Adams with an Al quality of milk, cream, eggs, broilers and roasters, and a look at the man's clear eye and tanned cheek, would show you that health, priceless health, has been returned to him. Buff Wyandottes, and the best, are Mr. Brown's choice.

Mr. J. H. Krum, Jr., part owner of one of the largest drug stores in the city is a breeder of S. C. Reds, and they are dandys.

Next to receive our attention is R. C. Blodgett, breeder of S. C. B. Leghorns, R. C. W. Leghorns and Buff P. Rocks. In addition Mr. Blodgett owns a large photographing establishment, so Mr. Whitney (in plain clothes) and myself sat to him, and if the photo proves good I will let the readers of the Fancier see it in the near future.

Now, the above spoken of breeders are all active members of the North Adams Poultry Association, whose next show will be held on 1st to 4th inclusive, of January '07.

Our next is to the yards of Mr. P. J. Lyre. It will need a special article to describe the beautiful collection of fowls and pet stock that Mr. Lyre has collected. He is also president of one and vice-president of several poultry societies. A gentleman and fancier whom to meet is to respect and appreciate.

After leaving Mr. Lyre's we proceed to Lenox and meet genial T. W. Broderick, who breeds R. C. R. I. Reds. Tim is one of those exhibitors that is willing to admit that the other fellow has a few good birds.

Mr. Wm. J. Welsh, of Lenox, receives our next call. Barred P. Rocks are "Bill's" favorites, and he is exceedingly strong in female lines, his first hen at Boston proving this, and it is too bad that the catalogue or poultry press did not give him credit for same. Next we meet Harry Petus, Secretary of the Lenox Poultry Show, and a breeder of Buff Plymouth Rocks. Harry gives us a cordial invitation to their Poultry Banquet, to be held on the 13th of the month, it being the five times thirteen birthday of the genial president of the Society, also the 13th annual of the Poultry Society.

Next we see the yards of Wm. M. Shaylor, and here see what we consider the best collection of American Dominiques there is in America, and here we also see Barred Rock Bantams, the little beauties that gathered in the blue ribbons at New York. White Leghorns, too, are a fine lot.

One more visit and we are through for the week, so we visit the nicely arranged yards of C. Viddito, where Barred Rocks and White Wyandottes meet the eye, and a nice lot they are, and now we will wend our way homeward.

My first visit in the Nutmeg State was made at the yards of A. E. Bushnell, Lakeville. There is the making of quite a fancier in Albert. S. C. R. I. Reds are his hobby, and Al. certainly has good birds. He has exhibited a few times and has always come off with a few blue ribbons—but Al. tries more for eggs than ribbons, and he certainly gets them. He is fortunate in having a wife that is as interested in the chickens as himself. A sister also that is quite a henist. The number of eggs marketed by both brother and sister is proof positive that they know their business.

Mr. W. P. Bradley, also of Lakeville, has yards of Reds, Barred Rocks and White Wyandottes. His large boarding house giving really a home market for numbers of eggs, broilers, etc.

At Lakeville we had a real pleasant chat with our old time friend, R. W. Dufour, who breeds Buff Wyandottes, that are Buff. He advertises a few pullets in American Fancier that are sure to please, both in quality and price.

Next to receive our attention was James Ellis, also of Lakeville, a true fancier in the right sense of the word. He has birds of great merit in Cornish and White Indian Games, Buff Cochins and B. R. Game Bants. Here I saw a C. I. Game hen, five years old, that is simply a marvel in shape, size and lacing. We leave honest "Jim" regretfully, and take the train for E. B. Thompson's, and, of course, all readers of the Fancier knows at once that that means Barred Rocks. We found "his nibs" in his breeding pens carefully going over the individual merits of each specimen. We look at bars, Bars, BARS, and almost commence to wonder how anyone can breed anything else but Barred Rocks. We are shown two great Cups; Cups?—they are more like barrels, and Ed. is certainly proud of them. We finally get away to visit the yards of George Hilson, but genial George is not at home, so we take the train realizing that we have seen one of the largest specialty breeders in America.

Well, the Lenox banquet is the next event to claim our attention. Some eighty participated, President Petus presiding. Toasts, songs, speeches, etc. was the rule of the evening, and I do not believe there is a more prosperous poultry association in the State than this one at Lenox. Here we visit Pinecroft Poultry Yards and was shown the whole plant in detail, here we saw birds fortunate enough to win at Lenox, Boston and other shows, and also saw that the birds were mated to produce results. Mr. Ferguson is an enthusiast in Reds and believes that the time is not far distant when they will be the leading variety in America.

We take another look at Mr. Welsh's Barred Rocks (we also take an ad) and again express our regret that the Boston catalogue failed to credit his win-

ning first on hen—then board the train for Holyoke, Mass.

Here we find Mr. George Barnett, Jr., the ever obliging secretary of the Holyoke Poultry Association, who introduced me to a Mr. Williams, and I wish here and now to thank these two gentlemen for their kindness and courtesy. After making an appointment to meet them at their poultry meeting that evening, we take a run down to Chicopee to see the yards of Mrs. W. J. Baker, another R. I. Red enthusiast. It would be hard to find a much nicer lot of Reds than we saw here, and the numerous ribbons that they have won when they have been exhibited prove their quality. Back again to Holyoke and attend a very enthusiastic meeting of poultrymen. The principal question on tap being that old, old one, score card or comparison.

The next morning beautiful (?) snow holds forth, and continues all day. Rather disgusted we start for Worcester, and getting Mr. W. J. Wheeler on the 'phone, we find his location. We find him and his Games in grand quarters. A little thing like two foot of snow does not upset them in the least. Mr. Wheeler informs me that they have plans under way to start a large association in Worcester. Our next call takes us to the store of C. A. Ballou, with whom we have a hearty handshake and who introduces us to Mr. S. J. Carpenter, breeder of several varieties. We then had the pleasure of a thorough inspection of Mr. Ballou's stock. His Dark Brahmas are too well known for me to comment on, and his Barred Plymouth Rocks are certainly an even lot of birds and mated to produce results or I miss my guess. (Darn the snow.)

I think I gave you my visit to Judge Ballou's place in my last, so this letter will start with my visit to the yards of that old tried and true fancier, breeder and judge, H. S. Ball, of Schrewsbury, Mass. Here we see what is hard to meet with to-day, and that is, a grand yard each of Light and Dark Brahmas, Buff and Partridge Cochins, a rare thing to find in one place. Mr. Ball also breeds some fine White, Buff, and Barred Rocks, Buff Cochins and White Jap Bantams; well, we must move on—much against the wishes of Henry and his good wife. So Henry gives us a sleigh ride to the trolley, some mile and one-half away. We hike back to Worcester, then to North Grafton, to the yards of George B. Inches. Here we meet Mr. Nelson Vandell, Jr., the able manager of the yards, and here we see, I think I am safe in saying, the finest collection of Dorkings in America. Here are pens made up wholly of prize winners. I thought so much of the display that I surely will have to invest in some Dorkings in the very near future. I do not think there is a more beautiful fowl bred to-day than a fine Silver Dorking. Mr. Inches also breeds R. C. Black Minorcas and R. C. Brown Leghorns, all of grand quality, and under Mr. Vandell's care they are certainly looking their prettiest. We did not have the pleasure of meeting Mr. Inches, but Mr. Vandell certainly did the honors in Al style. Back to Worcester and away to Lancaster and saw the yards of A. C. Hawkins.

Then to C. H. Latham's where pen after pen of pullet matings are shown us in Barred Rocks. Dear old Dr. Madison is pointed out to us and the old girl is still looking fine is a

mid way of expressing it. Mr. Latham has certainly "got the goods." Our next stopping place will be Providence, R. I.

Providence Seed Co., Providence, R. I. In charge of W. I. Brown, the very efficient secretary of the Rhode Island Poultry Association.

Mr. Brown reports a great increase in sales of poultry supplies, especially incubators and brooders. This firm is too well known to need any word from me. They are certainly fortunate in having as able and efficient manager as Mr. Brown has proved himself to be, and being secretary of the R. I. Poultry Association gets him in touch with all poultrymen in this near vicinity, and the number of shipments made daily show that this firm has a reputation far beyond the city limits.

A live poultry association controlled by a live board of officers is certainly a means to encourage the breeding of better poultry and in this respect Providence has been extremely fortunate. Mr. Williams, as president, not only presides at meetings, but takes an active interest in the general advancement of the association's interests, and with Mr. Brown as secretary, and Mr. Congdon, treasurer, this society is certainly in very able hands. Mr. R. G. Davis, of "Leg Band" fame, has also taken an active part in the show proceedings.

Mr. H. G. Gardner, 70 N. Main street, Providence, R. I., general dealer in poultry supplies, poultry, etc. It is surprising the number of thoroughbred fowl he disposes of in the course of a year. Mr. Gardner certainly knows a good bird when he sees it. Eggs laid while you wait is one of the features of this establishment. Mr. Gardner swears by the Columbian Wyandottes of which he has a fine collection.

I believe I left off in Providence, R. I. After a rather strenuous day through snow, mud and sleet, was quietly eating my supper when I received a telegram from the New York office, to come to New York at once, so boarding the train at midnight I arrive in the great and only New York the next morning, and am told that I will have to stay in New York and vicinity for a while.

My first visit is to the Short Hills Poultry Yards, where we meet Mr. B. C. Fincke, proprietor, and our old friend, B. C. Thornton, manager. Benny is looking as hale and hearty as a two-year-old.

We sit down and have a good old time talk of things past, present and the future, and then take a look over plant, and find as healthy a lot of White Leghorns as we ever saw—and Game Bantams; well, any that know "Benny" Thornton knows that none but the best would suit him—but the brooder house is the feature of the establishment. They have some twelve hundred chicks, out from four weeks to as many days old, and their hardiness shows the perfect condition of their breeding pens. Selling newly hatched chicks will be one of the features.

Mr. Fincke is building poultry plants for several wealthy gentlemen, near to or in Short Hills, in fact, he seems to have started quite a spirit of enthusiasm in poultry culture. Mr. Fincke has kindly promised us a day's ride in his auto as soon as this beautiful (?) snow will permit.

The next morning we start for the Gedney Farm, White Plains, N. Y.

Right here let me say to those who wish to see an A1 poultry establishment I would advise their visiting Gedney Farm Poultry Yards. It would be hard to find a place where money expended in an intelligent way has given a nearer practical plant than here. Mr. Frank Gaylor, manager of the yards, is a past master in the building and arrangement of poultry plants, in fact, he has perfected a brooding system that is as near the ideal as can be.

Well, when we meet Mr. Gaylor we have a hearty handshake, for do you know that Mr. Gaylor gave me a helping hand years ago, and there has always been a warm spot in my heart for genial Frank. After a little, or rather few, old time reminiscences we start over the plant.

That Frank has given his best efforts in the locating and building of this great poultry plant will not be questioned when a careful visit is made there, and as some cuts of the plant will soon appear in *The Fancier* I will not go into a description of the buildings.

The stock is composed first of Buff Orpingtons, and that Frank let his well earned knowledge of mating come into play, is shown in his winnings at New York and Albany last winter. Frank believes there is much more honor in breeding than buying. The next or rather the other breeds on the place are Black Orpingtons, Black Minorcas, White and Columbian Wyandottes and R. I. Reds. Mr. Gaylor, in order to know something of the comparative laying qualities of the different breeds under his care, has given to each breed a pen, to be fed and taken care of alike. A daily record is kept of the production of each pen and it is the intention of Mr. Gaylor to give us the result of the experiment, and I for one will look for it. Well, all good things must come to an end, so I get ready to leave, and while shaking hands, I first notice that the grey is working in Frank's hair, to the extent that he would almost be disqualified for color of plumage.

Next we start for Brooklyn to visit Mr. E. R. Collins & Son. We will have to say that these gentlemen can raise more and better chickens than any we have met up to date, in close quarters, but the health and good looks of the flock show the care that they receive. Rose and Single Comb Black Minorcas, Buff and Black Cochins Bants, Black and Grey Jap Bants and Black Rose Combs. The Messrs Collins take great pride in their winnings at such places as Poughkeepsie, Herald Square and Madison Square.

Here again I have to leave an old friend, but like the Wandering Jew, I must ever onward.

The name of A. C. Hawkins, Lancaster, Mass., is so well known to the readers of *The American Fancier* that it is needless for me to give an introduction to his name—but will say that I visited his place some few days ago, and must say that I was impressed with his immense plant. That Mr. Hawkins is a past master in the art of breeding, raising, and exhibiting fowl, is an undisputed fact. Lack of space prevents me giving a detailed description of Mr. Hawkins' matings, but can cheerfully say that he is prepared to fill orders from as good pens as can be found anywhere.

Geo W Weed

With eggs pouring into the New York market at the rate of nearly 20,000 cases every week-day, it shows the hens in the districts which this supply is drawn to be working on full time. One often wonders where such a quantity can find consumers, yet the arteries of trade seems to absorb all offerings and constantly calls for a new supply.

There really must have been some merit in the old yellow hen of our great grandfathers' time, else how could so many meritorious breeds have sprung into existence, all claiming the old yellow hen as an ancestor.

First she has helped us make a lot of really good Buff breeds, and the public appetite having become satiated with this color, she has now come to the front with some red breeds, all popular and more than anxious to claim the old girl as a mother, but hark back some twenty or forty year. How many thousand times has grandfather been denounced for keeping his mongrels, lack of uniformity, poor laying qualities, small in size?

These are a few of the expressions used by their detractors.

But listen to the tale of these latter day exploiters: "We have made a standard for our particular brand of Reds and while they do not breed ununiform as yet (neither did grandfather's) we hope by selection (which could have been accomplished with grandfather's) to fix a uniform type. And listen, "those with feathered legs and foreign feathers will benefit the farmers." In other words, the farmers must not breed mongrels, excepting those he buys from the boomer.

There are many sides to the question of creating new types, the public can only demand consistency, it is not right to praise with one hand and condemn with the other. Some breeders obtain a great amount of enjoyment in experimenting with fowls, similar to the desire of others to produce new varieties of fruit, new berries, and new vegetables and grains. Many improvements have been recorded and great benefits have been reaped by growers; record-breaking is the order of the day in every walk in life, every poultryman dreams of owning a flock of hens that will lay three hundred eggs a year, grow chickens weighing on an average ten pounds each at six months.

Cows with prodigious milk and butter records are sought, great crops of grain and so on through the lists. These ambitions are all to be commended, but even more so are the efforts of those who stick to the old line breeds in their purity, and seeks by selection and improved methods to produce the record breakers and many more times succeeds in his object.

Some writers claim to be able to maintain twelve hens on a quart of grain or its equivalent a day. I must confess I cannot get my feeding down

to this point. The best I can do is a quart to six hens on an average and some days I will not get around under one quart to every five.

On a ration of whole grain I believe I could get over the flock at the rate of one quart to ten, but I would go away feeling that I had only half-fed them. When I get through feeding, I like to see the crop showing on every bird, not to the extreme of being gorged, but rather a fair-sized lump to show they have been dined.

To my mind, it is impossible for fowls to lay much where a depression over the crop can be noticed. Such feeding means a bare existence, with no egg-laying force behind it. I would like to see what other poultrymen consider a decent ration, and also, if they find a ration of ground feed given dry instead of a mash satisfactory, and how to feed without a loss from waste.

Backyard Fancier.

Here is the story of a flock of Orpingtons and Buff Rocks that were housed in a fairly warm pen and had the run of a good-sized backyard. The hens were eighteen in number. They were fed good wholesome grain and kept clean. The birds were fed on wheat, barley, oats and shorts, and had good clean water and plenty of grit and green food before them all of the time. Soft feed was given in the morning, at noon table scraps, and at night a mixture of the grains. The grain was usually fed in a litter. Some of the hens for exhibiting were separated from the flock, so as to receive extra feed, and be in good plumage. This lessened the egg yield to a certain extent, not to speak of some of the hens of the flock being used for mothers, a factor which decreased the egg yield in summer.

The expenses of this flock for appliances, stock and advertising was \$24.29. The cost for feed \$62.61. The total expenditure being \$86.90. The receipts were \$103.65. Eggs alone yielded \$49.40. The rest was for the sale of stock, prize money, etc. The total profit was \$15.75. The number of hens to yield this was 23 to start with, but the sale of hens and hens sitting made an average of about 18 laying hens. The eggs were very fertile, averaging about ten chicks per thirteen eggs, raising in all about 140 chickens. The number of eggs laid was 2,400.

American Light Brahma Club.

The following are the officers of the American Light Brahma Club, which was organized October 15, 1902: President, C. P. Nettleton, Shelton, Conn.; Vice-Presidents, Chas. I. Balch, Manchester, Conn.; Philander Williams, Tauton, Mass.; Henry T. Reed, Camp Point, Ill.; Wm. C. Parker, Berwyn, Md.; Secretary-Treasurer, John Rumbold, No. 119 W. Barre street, Baltimore, Md.; Assistant Secretary, Frank P. Johnson, Indianapolis, Ind.; Executive Committee, J. H. Drevensedt, Johnstown, Pa.; H. N. Rollins, Westboro, Mass.; Dr. J. J. Brinkerhoff, Minooka, Ill.; William Clowes, Paterson, N. J.; Harris Lehman, Midway, Ky.

Secretary-Treasurer A. C. LeDuc, of the Silver Wyandotte Club of America, states that the annual catalogue of the organization is now ready and may be obtained by addressing him at Chenea, Ill.

A Weekly Journal Devoted to Standardbred Stock.

Application made for second-class rates at the Post Office at Ossining, N. Y.

J. H. DREVENSTEDT, Editor.

SUBSCRIPTIONS.

Subscription, \$1.00 per year.
Foreign subscription, \$1.50 per year.
All subscriptions payable in advance.

NOTICE TO SUBSCRIBERS.

Subscribers will be notified when their subscription expires. If a subscriber wishes his subscription to the paper to be continued he must so notify this office and send the amount in payment for the same, otherwise the subscription will be discontinued.

IMPORTANT NOTICE.

All matter, advertising or otherwise, must reach the office of The American Fancier, No. 26 Cortlandt Street, New York City, not later than Monday afternoon of the week in which the same is to appear.

ADVERTISING.

The advertising rate in The American Fancier is fifty cents per inch for each insertion. Five per cent. discount for payment in advance for six months insertions, and ten per cent. for payment in advance for one year's insertion.

CLASSIFIED AD RATES.

Forty-two words or less one time fifty cents; three times, \$1.00; thirteen times, \$4.00; twenty-six times, \$6.00; fifty-two times, \$12.00. Additional words at the rate of two cents each for one insertion, or one cent each for each insertion when run thirteen times. PAYABLE IN ADVANCE.

THE AMERICAN FANCIER PRINTING AND PUBLISHING COMPANY.

OSSINING, N. Y.

Havemeyer Building, 26 Cortlandt Street.

New York City.

For the benefit of well-meaning, but misguided friends who are afraid to sign their names to communications intended for publication, we will state that all such anonymous stuff is "skiddooed" to the waste basket. Boys, if you have any complaint to make, sign your name and address as a guarantee of good faith. Don't fire from ambush for, perchance, it might prove to be a boomerang.

George W. Weed, our traveling representative, called at the office last week and reported a decided interest taken in the new American Fancier all along the line in lower Connecticut. He says the Shelton twins, Senator Nichols and Postmaster Holmes, were especially tickled over the situation and treated "Pusley" Weed in most hospitable fashion, and so did the many friends of that pair of genuine fanciers. The fraternity is indeed well off when it is made up of such men as David Antonio Nichols and William Holmes, of Shelton, Conn.

Mr. Weed started this week for an extended Canadian trip, and will from week to week write about the doings and sayings of our Canadian friends and fanciers. For, be it known, The American Fancier has many loyal supporters in the Dominion, such as Sir Richard Oke, Dr. O. W. Bell, William Barber and the great and only perennial kid, "Billy" McNeil, and there are others.

You never can measure a poultryman's christianity by the size of the prayer book he carries; neither is the Grand Army button always a guarantee that the wearer is all wool and a yard wide, when it comes to poultry dealings. We have found this out by experience with a number that used the pious cloak and an honorable army record to "do" those that trusted them. The game works in other lines as well as in the poultry business. And perhaps it always will be so, as the millennium, especially in the chicken business, is in no danger of arriving for thousands of years to come. The only thing to do when one of these frauds is discovered is to nail him to the mast and expose his doings.

We called on "Herr Wilhelm" Russ, usually called "Billy Russ," the other day and found that hustling supply king, of 26 Vesey street, up to his neck in business. "Never had such a season, way behind my orders, business is booming, you bet," was the way he put it. We should say it was, the two big stores and large basement were packed with customers and it seemed as if everybody wanted to be waited on at once, or sooner. The gray locks of "Willy" have turned to a silvery white, which matches that beautiful pink complexion all right enough, but deep furrows in the brow indicate the strenuous life and strain of business. The incubator and brooder business, like a flock of wild ducks, comes all at once.

Around the corner at Barclay street we found "Wizard" Dillingham flying around like an airship, directing an army of clerks and watching one wagon load after another depart with large consignments of Cypher's Incubators and Brooders. If the rush don't let up the "Wizard" will be reduced to a fence rail in size. "People are getting to be poultry crazy and I'm glad of it," spake the "Wizard." So are we.

Way up at Bound Brook, New Jersey, the Hon. Lee Star Bache sits up nights trying to figure out how he can deliver the hundreds of incubators and brooders that are ordered and have not been finished. It's a hard problem, as the Star Incubator Company have had an unusually large demand for the various products they produce, which, notwithstanding the large capacity of their factory, could not be rushed out as fast as "the only" Bache desired. "It will be different next year. We will prepare for it in good season and arrange to get labor if we have to send a thousand miles for it. This season the scarcity of labor caused many annoying delays." The latter is a fact in more than one section. Good carpenters are very scarce, although there are plenty of hammerheads that call themselves carpenters. The latter are of no earthly use in the incubator business. As Mr. Bache remarked: "We must have the best or nothing." Well, that new model Star Incubator looks as if the labor was all to the good.

We stopped at Jamesbury, N. J., and called on our old friends, C. E. Paxton and David Smith, of the Pineland Incubator Company. Things were even more strenuous there. Not a machine of certain models was in stock, and men were at it night and day finishing up late orders. The famous Pineland Brooders have had a greater sale than ever and there are hundreds to be delivered before the hatching season is over. This good old conservative concern has enjoyed a splendid trade, and why not? Every machine is carefully built, under the personal supervision of Mr. Smith, one of the greatest incubator experts in America. We have watched that boy grow up in this line for the past twenty years, and saw his first incubator at the Orange County Fair, at Newburgh, in 1886. It was crude but good then; it is refined and good now.

From what we can learn of the Cornell, C. A. Cypher's and other incubator concerns, business has been simply great this season. And yet what will it be later on? Like Topsy, "it just grewed up," in the beginning, now it is booming all along the line.

While on this subject we beg to caution our readers, when buying incubators and brooders, deal only with reliable and established concerns. The great boom in the poultry business has brought out the sharks, who build cheap machines, advertise largely, and take in the unsuspecting public even more largely. Some of these useless and trashy machines are made in the West, and a friend of ours who bought one, because it was cheap, is a very sorry individual to-day. He lost every egg put in the machine. Almost at his door was one of the best incubator factories in the United States. That was too near home, he had to get something from a distance. He got it—and good and hard. This little "Willy" will never wander from his own fireside again.

George E. Rowland, of Jersey City, who several years ago was the Cavy King of the American fancy, bids fair to be the supreme ruler in the pigeon ranks. His magnificent display of Magpies at the Madison Square Garden, last winter, is history, and glorious at that. His Fantails are in

the same class. George is the proud possessor of the Fantail Cup winner at the Crystal Palace, England, a bird that has caused much favorable comment on the other side. It did at New York where it repeated the trick of beating all comers. At Boston, however, the judge failed to arise to the occasion, the bird being so extraordinary in the fine points that make up a real Fan, that the wearer of the ermine propagated a case of mental abbreviation. Fantails are hard to judge, especially a class of real top-notchers, so it is not easy to blame a judge who is not entirely familiar with the "real goods" when he fails to place the awards where they should go. In talking this matter over with our friend Rowland, the latter remarked: "There is no doubt in my mind that the judge was thorough honest in his opinion and withal a nice gentleman, but he is not up on Fantails, and it would be useless for me to show crack birds under him in the future." It is rather a difficult matter to choose between a judge who is thoroughly competent but a little weak in backbone and inclined to favor the chosen few—as is the case in many instances at dog and horse shows—and the strong-minded judge who is not up to his business. Men of Mr. Rowlands stamp are genuine fanciers, who spare no expense to procure and breed the best, and such men are entitled to a run for their money. To give such fanciers their just dues, secretaries of our large shows are in duty bound to provide the best experts in the country. It is nonsense to say that a competent and honest judge cannot be secured. There may be but a few, but that chosen few should be enlisted at all big shows. It is the only way to bring the fancy up to a high ideal, and the poultry and pigeon shows up to a standard where absolute confidence exists among exhibitors.

What is wanted, especially in the pigeon fancy, is writers who have knowledge, experience, and sufficient nerve to say what they think. A little good old vigorous English, albeit clean and healthy in tone, will do much toward elevating existing conditions. The American Fancier will shortly start a regular pigeon department under the supervision of a most careful and expert fancier. We believe such a department conducted on the lines indicated above will prove a winner.

The Westchester County Poultry, Pigeon and Pet Stock Association has just been organized by prominent fanciers in and about White Plains, N. Y. The officers are: President, Howard Willets; Vice-Presidents, W. W. Casswell, C. W. Leavitt, Samuel Untermyer, Benoric Platt, F. W. Glover; Executive Committee, Frank W. Gaylor, Dr. M. S. Sherwood, Theo. Baker, Jr., Claude D. Edgeton, Oscar W. Upson; Secretary-Treasurer Fred Harries, Elmford, N. Y.

Frank W. Gaylor, the veteran fancier and poultry manager of Gedney Farm, writes us in connection with the above society as follows: "Last fall at the White Plains Fair there was every evidence of the need of concerted action upon the part of someone to try and improve the exhibit of poultry at our fair. As a result a few of the exhibitors got together on Thursday of the fair week and

ganized the above association. We shall make no attempt to hold a winter show until we get a bit older than we are now. Our first and main object will be to get control of the poultry exhibit on the White Plains Fair Grounds, revise the premium list, and make it more of a fanciers' show than it has been in the past. It seems to me that the location here is one of the best that could be desired for a first-class fall show and it only lacks the right material to make it such." The material is there and a very fine article at that. There is no reason why the White Plains show should not be the best fall exhibition in the State. The splendid record made by Poughkeepsie is largely due to the efforts of T. C. Van Wyck, backed up by the liberality of the officers of the Dutchess County Agricultural Society. Frank Gaylor, the perennial youth, is just the man to superintend such a show at White Plains and we hope to see him there next fall in that capacity, shaking hands with his friends, who are legion.

* * *

A. C. Hawkins has come back to The American Fancier and is now a regular advertiser same as he was in years gone by. Mr. Hawkins was one of the first to build up a large poultry ranch and for many years enjoyed the distinction of having the greatest plant devoted to standardbred poultry in the United States. He has shipped birds to all parts of the globe, his sales aggregating many thousands of dollars each year. There is no keener and better judge of his specialties, Barred Rocks and White Wyandottes than the veteran breeder of Lancaster, Mass. He has forgotten more than some of the youthful claimants for everything in sight ever knew. Mr. Hawkins is well posted on other varieties and it is a pity that he is not selected to judge at shows of importance more frequently. It is just such men that are needed as judges, men of experience and ability, not theoretical growths of knowledge minus experience.

* * *

The next show at Cleveland, Ohio, will be held the week of January 28th, 1907. Fred E. Pile is president of the Cleveland Fanciers' Club Company, and that means business from end to end. Further announcements will be made later.

* * *

We have just received word that Dr. Bell, of Toronto, Canada, has been appointed manager of the Industrial Fair at Winnipeg, Manitoba. When his name came before the Industrial Exhibition Board as an applicant for the position of general manager, he was selected from the three that applied by a unanimous vote. This is a high honor and deserved tribute to a gentleman who has made the poultry and dog shows of the great Toronto National Exposition famous. Dr. Bell is without a peer in this line of work. Cool, firm, methodical, but courteous to all, he makes an ideal manager. And how he can make the judges skiddoo; ask Grandpa Butterfield or George H. Burgott about that. That pair of B's were twenty minutes late once in reporting for their judges' cards. That six-foot frame of the doctor's made George Pan Burgott a bit scared, and when those eyes of the tall gentleman from Toronto fell on the latter it was all to the woods for Georgie and he worked like a

nailer to finish his job on time. Of course Bismark Butterfield had to make one of his Foxy Quiller speeches, which was cut short, however, by the doctor, who said: "Talk don't judge birds, its Butterfield that does that," and the old veteran started off like a gray pacer with a 2:02 mark. That's the kind of a man Dr. Bell is. A few of his kind at some of our big shows on this side of the border would do no harm; on the contrary, a great amount of good. Ask George, of Lawton's.

* * *

We were greatly disappointed one morning last week. A very nicely done up package was lying on our desk. It was a little jewelry box. On opening the lid—for the lid is on in New York—we found some cotton, just what fine jewelry is encased in. But there were no diamond earrings or scarf pins, only a little wee egg the size of a small marble and just as round. The genius who sprung that April fool joke was the tall sycamore of Rochester Heights, Raymond Joker Ruliffson, of Black Cochon Bantam fame. He kindly writes a letter, which was carefully mailed a bit later than the box, and says: "I am sending in separate package an egg which was laid to-day by one of my Blacks, and it is certainly the limit for size. If the shell were only a little harder I might make considerable money selling mibs to the school children. Have you any idea of the cause of the freak?" No, the question, like the egg, is too small to answer your or anybody else's purpose. Come Ray, feed your Bantams at least occasionally and give them a show for their alley. Probably the next freak to reach us will be a jumbo egg with several others inside. A triple egg was recently laid in England and it was said to be a marvel of duck workmanship.

* * *

The story of the famous \$750 dollar Buff Rock hen at Boston, which was telegraphed all over the country last January is beginning to take on amusing features. Mr. Charles, of White's Class Advertising Co., the New York representative of the latter, and a very clever one at that, sends us a clipping from the Chicago Tribune, of March 25th, which contains an illustration of a Barred Plymouth cock with the following notice: "Hen that sold for \$750. This hen, winner of the Lawson Silver Cup at a Boston poultry show, was sold for \$750. It is a Buff Plymouth Rock." That is about as near right as some newspapers get things when it comes to chickens. Now listen to this from Bro. Charles: "You will notice that this rooster-hen sold for 750, more or less. We understand you are the purchaser. Our Mr. Dietz says he did not know that you were breeding Buff Plymouth Rocks with bars on. The writer was afraid that the air over in Jersey would be too much for a loyal New Yorker like yourself." Thanks, Mr. Charles, but you are visibly off in your deductions, and it is up to us to correct several erroneous impressions regarding this hen-rooster, etc. We did not live in Jersey when we bought the bird, but way up in little good old Johnstown and merely happened to pay a visit to the Hub and see the show. In the second place it was no hen at all, but the first prize Buff Plymouth Rock Cock. In the third place we did not pay \$750 for him. We claimed him at the catalogue price. This should set

everything straight and satisfy you and Mr. Dietz that New York air did not affect our judgment. That's all.

* * *

Our friends will notice that in this issue of the Fancier we have an advertisement of the Peapack Farm, Peapack, N. J. This farm is owned by two well known fanciers, T. Farrar Rackham and Fred Huyler, and anyone who has seen their birds can readily appreciate the high quality of their stock. The American Fancier can recommend them to any of its friends, since they are fanciers of the highest standing, and their stock is on the same plan. We have personally seen their birds at different exhibitions throughout the country, and we have no hesitancy in recommending them to anyone who wants high-class White Plymouth Rocks.

COOK SWIPES THE ORPINGTON STANDARD.

Under the caption "The Limit," Theodore Hewes, editor of the Inland Poultry Journal, prints the following well deserved criticism:

"In the March issue of the Orpington Poultry Journal appears an exact duplicate of the Buff Orpington standard as accepted by the American Poultry Association and printed in the illustrated Standard that is now for sale by that association.

"The only excuse the editor offers is contained in the following paragraph: 'We print in this month's issue a copy of the standard of Buff Orpingtons from the American illustrated Standard. This will save some of the expense of buying this just to see the Buff Orpington standard.' From the above it is plain to see where a little thing may lead to and I had this in mind when I wrote my editorial several months ago under the head 'Hands Off.' It seems to me that the publishers have gone far enough transcribing the American Poultry Association copyright, and there should be some way of bringing them up with a short term. What action will be taken we are not prepared to say, but unless something is done it will not be necessary to print an extra edition, as the poultry press at 50 cents per will furnish all the information that the breeders require. We do not believe the Orpington breeders, as a class, favor this sort of piracy; if they do then we are very much mistaken in the quality of the men and women who represent this popular breed. We feel it is the duty of the Orpington breeders themselves to protest against this infringement, and we believe they will do so when their attention is called to it."

The contents of the American Standard of Perfection are copyrighted and no publishers has a right to abstract even a part of the book, no matter how small, without permission from the Association. The exception to the rule is only where it becomes necessary for an editor to quote a section in order to set aright some inquirer who may be twisted in his interpretation of aforesaid section. The action of our English friend in New Jersey, Mr. Cook, is not creditable, in fact, it is a big surprise to us. He should be made to pay the penalty. We, as Mr. Hewes states, do not believe the Orpington breeders would sanction such petty business. We might call it a harsher name, but what's the use? The deed is done and there is no use crying over spilt milk. Let the Executive Committee take the matter in hand and put it up to the gentleman of Scotch Plains good and hard.

Old plaster is an excellent article for your hens to pick at. This don't license you to knock down your parlor ceiling, however, just to be obliging to the hens.

Organization Needed.

There seems to be an innate susceptibility in every human nature to the charms of some particular form of life or beauty. In the delicately sensitive natures it may develop into a passion for art, music, or nature study. In others it takes the form of a love for a flower, a bird or a beast. We belong, brother fanciers, to a peculiar sect among the multitude of hobby worshippers. A scarcely recognized division. An infant struggling for recognition.

Our growth has been comparatively slow. Note, for instance, the rapid development of fancy pigeon interests, especially in our Western shows, the display of pigeons far outclasses the Bantam alley. It behoves the Bantam fancier to study the reasons for this apparent lack of interest on the part of the public. Is it that our hobby is less an art than pigeon breeding? I cannot believe that. We have a wide variation of form and color. Ours too is a study of artificialities. We have as striking examples of manipulated nature without the consequent incapacity and utter helplessness of our pets. We have practical utility.

No, it's not that we have tied to a hobby undeserving of extensive appreciation, but we must follow the examples of our friends the pigeon fanciers and exhibit in force of numbers and variety. We must eliminate commercialism and fraud and make our competitions clean and fair.

We need thorough organization and perfect harmony among ourselves and then with a helping hand from every individual of the fraternity in the way of liberal entries at shows we can gain the recognition from the public that the beauty and the utility of our pets deserve. It is to the interest of every loyal fancier to add his mite to the extension and perpetuation of his chosen hobby. There is real worth and unlimited pleasure in it. Do your best to interest outsiders and our own pleasures will increase accordingly.

FRED. Y. PARFREY.

SPECIAL ANNOUNCEMENT.

The American Fancier wishes to announce that Mr. H. M. Pockman, the noted pigeon judge and breeder, will take control of the Pigeon Department, on and after the Special Easter Number, April 14th. This Department will include two or more pages every week, especially devoted to pigeons, both exhibition and breeding. The Editor will appreciate any articles pertaining to this variety of the fancy mailed to him personally, at No. 26 Cortlandt street, New York City, care of The American Fancier.

NOTICE TO CORRESPONDENTS AND ADVERTISERS.

Owing to the increasing circulation of The American Fancier, together with a corresponding demand upon our advertising columns, correspondents and advertisers are notified that all communications should reach the office of The American Fancier, Havemeyer Building, No. 26 Cortlandt Street, New York City, before 4:30 o'clock, P. M., on Monday of each week, in order to secure insertion in the current issue of the paper.

There is plenty of cash in the land waiting to be paid over to the successful ones in poultrydom. It is only the shiftless biped who don't succeed that cries, "There ain't any money in the chicken business!"

BROWN'S BUDGET

What is it everyone has to give away and no one wants to receive?—Advice. If we put advice in information clothes it generally suits better.

Information that has a basis of practical experience is generally of considerable value, but where it is desired to press it on freely from a theoretical standpoint doubtful results may be looked for.

It is now in the height of the breeding season. Do not forget that some male birds are so gallant they will stand and call up the ladies of their harem at feed time and themselves not get enough food. Such specimens must be fed later on alone to secure best results in the breeding yard.

The man who buys some fine pure bred fowls and then gives them the lack of care he has been giving a lot of mongrels, shouldn't expect any better results from his new investment. Neglect counts its penalties whether the fowls are of high or low degree.

The Southern States may now be said to be producing all the varieties of pure bred fowls, and of a quality fully equal to those of any of the states. The poultry shows in the South are also becoming conspicuous in numbers and are well managed. The poultry industry is more rapidly increasing every day in all sections. Poultry products are one of the pure foods that cannot be adulterated. The demand for poultry products increases as fast as the business expands. The American hen is a money bringer to all classes high and low.

Make arrangements this spring, if you haven't got plenty of good grass for chicken pasture, to sow some seed that will produce the proper kind of greens. Alfalfa is splendid, if your soil will grow it. It will not grow in soil that is deficient in nitrogen. You can buy seed that is inoculated that will grow, and can also buy the powder—or get it from the Agricultural Department at Washington, D.C., if supply is not exhausted, free—that will enable you to prepare the seed so they will grow. Rape is another fine green for chickens. It will bear cutting off and will grow again.

It is wiser and cheaper to doctor the causes, than the ailments of poultry. There are so many causes that are known to surely produce certain ills, and ills that are known to be serious. Yet we find many doctoring fowls and letting the causes still exist. Why do they do it?

Some of next winter's winners at the big shows commence their chicken career in March. So far the month has been very unpropitious chicken weather, and the ground-hog (wood-chuck) prophecy of bad weather for

six weeks seems to be correct. It has required strict attention to counteract the elements that the chirpers have endured.

Some people seem to conclude that it is wrong to talk about utility in connection with pure bred poultry, actually go so far as to intimate that is disloyalty to the score card. Such a theory is mere nonsense. The wonderful commercial importance of poultry to-day is mainly due to the pure breeds. The poultry that sell the highest and that is more in demand is the pure breeds. What is classed as the highest in quality is the pure bred specimen. Mongrels or cross bred specimens cannot be produced that will equal them. A package of pure bred fowls dressed for market are uniform in size, weight, color and shape. These are great selling factors as this very appearance is inviting. With the common scrubs, mongrels, etc., there is a greatly contrasting condition in all these things that at once stamp them as "seconds" with commission men.

Don't bother about utility, eh? Why does the fancier lay so much stress then on the fact that his hens have made trap nest records? Why does the Standard require a weight specification for both cocks and fowls in the show room when they are to be judged? Does the farmer ever have his cockerels of his flocks of cross breeds reach the same weight at the same age as those raised by fanciers? It is the pure bred poultry as bred by so-called fanciers that has put so much utility on the breeds. Beauty and utility should be a combination inseparable with the great majority of breeds.

I am glad to see "Drev." is going to raise Creve-Coeurs. Years ago the writer bred them; imported eggs from the best French breeders. They proved to be splendid layers of large eggs, and as table fowls were unsurpassed. They have an unusually plump, deep-meated breast, which cooks juicy and tender. The percentage of offal from a dressed specimen is less than any breed we know of. The Creve-Coeur is a breed that should be very popular, and would soon be if its good qualities were well known.

It is a good thing to note when certain men take up a breed. It means that the breed will be pushed to the limit of perfection. Some years ago the writer had the pleasure of awarding a fine gold watch at a Rochester show for the best collection of Black Minorcas. The winning specimens were marvelously uniform in general excellence. I wondered who bred them; was told it was Dr. Andrus—then I didn't wonder. Now the Doctor is devoting some attention to Columbians, so this new breed has an intelligent ardent friend.

Understand the Columbian Wyandotte Club is rapidly growing. The breed is certainly a comer, and at the big shows next winter there is going to be some classes of Columbians that will open the eyes of visitors—for they will be out in numbers and with plenty of high class show quality, too.

GEO. O. BROWN.

Parkville, Md.

LAYS HAM AND EGGS.

(New York Tribune, March 13.)

G. Nicholson, of No. 150 Broadway, in commenting on the report of hens laying eggs with handles, published in yesterday's Tribune, said:

"The article in to-day's Tribune regarding the man in Newtown, N. J., who had succeeded in producing eggs with handles, convenient for eating, etc., is extremely interesting, and while it is very wonderful, it is right in line with other discoveries being made by scientific men, notably Professor Burbank in vegetable, and Professor Loeb in animal, life. And right here in this city a professor of chemistry in Columbia College, who is a friend of the writer and whose modesty prevents his allowing his name to be published until later on, has for some time been experimenting with fowls, somewhat on the line, however, of hypnotism, as is done on human beings by Professor Quackenbush. Every farmer's boy knows that hens are very susceptible to hypnotic influences, and it is quite common for boys in the country to hold a hen firmly in their hands and looking cross-eyed at it the fowl will soon begin to look cross-eyed and go about for days in that condition.

The first experiment made by the Columbia professor was in feeding to hens pepper and salt mixed and hanging before the hens salt and pepper boxes, so that they could be plainly seen, and in a few days the eggs produced were all seasoned ready for use. Going still further in the matter, he fed the hen on comminuted ham, and the next day the hen produced an egg which, on being cooked, could not be distinguished from the ordinary ham and eggs as served in restaurants, except that it was all together, like a pancake, and it then occurred to him that possibly by applying the direct rays of the sun to the hen it might produce a cooked egg, and after experimenting by putting the hen in a glass box and exposing it to the sun the hen produced a cooked egg, and although these things may seem remarkable to the unscientific mind, the professor went still further, and reasoned out that hens could as well produce two eggs per day as one. He therefore fed the hen on sulphur and lime, and also contrived a box with a spring bottom, so that when the first egg was laid it was dropped to a cushion below, and then the hen, as usual, turning around to see the egg which she had laid, and it not being visible, in less than an hour produced another complete egg, but it is only fair to say that it was of the common variety, and not quite as large as usual, but the professor thinks within a reasonable time he will produce an educated hen that will lay cooked eggs with ham, or other material, and all ready for use.

"We may say that arrangements are being made to patent the process, and that a company will be formed which would seem to have great possibilities."

If your Fowls are Sick and mope about, sneezing; eyes swollen; rattling in throats, they have Roup, the most dangerous disease known to poultrymen.

CONKEY'S ROUP CURE

is the one article that will not only Cure but prevent this disease. It is easily given; kills the germs; tones up the fowl's health. Just as good for Turkeys and for Canker in Pigeons. **GUARANTEED.** Conkey's Roup Cure is so under a positive guarantee. If it fails to cure Roup, Colds or Canker in any form, your money will be refunded cheerfully.

If your Poultry Supply Dealer or Druggist cannot supply you, send order direct to us. Don't accept a substitute. Insist on Conkey's.

Price, 50 cents, postpaid, makes 25 gallons. \$1.00 75

HENRY R. INGALLS, Greenville, N. C.

LITITZ, PA.

The third annual exhibition of the Lancaster County Poultry and Pigeon Association, held at Lititz, Pa., was again an unqualified success. Over 1,200 birds were shown by ninety exhibitors. All premiums were promptly paid and a nice amount added to the treasury surplus. While this was only the third attempt the Lititz Show already claims the proud distinction of being the leading exhibition in the Keystone State. This success is all the more remarkable when it is remembered that Lititz is a borough of only about 3,000 population. The success is mainly due to the hustling efforts of Secretary J. W. Bruckout and Treasurer D. G. Witmeyer.

The poultry judges were Charles T. Cornman, of Carlisle, and F. G. Bean, of Collegeville; the judge on pigeons was W. J. Stanton, of New York City.

Poultry Magazine,

Monthly, 50 to 100 pages, its writers are the most successful Poultrymen and women in the United States. It is nicely illustrated, brimful each month of information on How to Care for Fowls and Make the Most Money with them. In fact so good you can't afford to be without it. Price, 50 cent per year. Send at once for free sample and **SPECIAL OFFER TO YOU.**

R. R. FISHER, Pub., Box 83, Freeport, Ill.

Just Give Us the Facts.

A lady writes:—"As I read what others have done in getting eggs in winter, I am tempted to tell you what I have done the past year. I can beat anything I have read, but I am not gifted with the pen, so will have to keep it to myself."

No gift of penmanship or language is necessary. Just give the plain facts and figures. Tell how many fowls you have, what kind, what they have done, and how they were fed and cared for. Those are the things readers want to know.

If the communication needs revising the editor will lick it into shape and say nothing about it. That's one of the uses of the editor.

Buff Plymouth Rock Club.

The officers of the American Buff Plymouth Rock Club are: President, W. C. Denny, Ithaca, N. Y.; Vice-Presidents, J. J. Keig, Lockport, Ill., M. F. Delano, Vineyard Haven, Mass., C. W. Fowler, Smyrna, Ga.; Secretary-Treasurer, C. A. Morton, St. Louis, Mo.; Executive Committee, F. C. Shepherd, Toledo, O., S. D. Lapham, Dearborn, Mich., B. E. Johnson, Kirkwood, Mo.

Do not remove chicks from incubator or take hen and chicks from the nest until twenty-four hours after the last chick has hatched.

WHAT YOU GET FOR 50 cents.

1 large package Beet	1 large package Squash
1 " " Carrot	1 " " Cabbage
1 " " Cucumber	1 " " Pumpkin
1 " " Lettuce	1 " " Pepper
1 " " Parsnip	1 pint King's Wonder
1 " " Melon	1 pint Early Peas
1 " " Turnip	1 pint American Wax
1 " " Parsley	1 pint Beans
1 " " Radish	1 pint Holmes' Early
1 " " Onion	1 pint Sweet Corn
1 " " Tomato	

What you need for your table all summer. Get your vegetables fresh out of the garden every day, and know what you are eating. This entire collection of seeds, best in the world, only 50 cents. Send your orders early and get your seeds on time to plant.

WE WIN!

At the late Madison Square Garden Show, New York, in the S. C. Buff, Black and White Orpington classes as follows: Seven firsts, 9 seconds, 7 thirds, 4 fourths and 4 fifths, and these in the strongest classes of Orpingtons ever put together, there being 370 birds competing. We also won the most prizes of any breeder in these same classes. We have the stock and established winning breeding lines, but buying high-grade stock and eggs cannot safely be done upon the strength of the mere argument a breeder has room to advance in his advertisement. Now we want you to send for our catalogue, testimonial book and a very elaborate mating list, describing over forty different breeding yards and prices of eggs for same. Do not be fooled or misled by misadvertising, but come to the fountain head to get your start.

HATCH WITH A STAR

And be certain of success. Heat, ventilation and moisture, the three great essentials to incubation, are the strong points in the **Star Incubator**. Its patented features to control these elements put it away ahead of all others and insure **STAR HATCHES**. Catalog explains how chick drawer—contained in no other—works. Read it and you'll see why the **Star** outshines others.

PLYMOUTH ROCKS.

BUFF ROCKS EXCLUSIVELY.—We have mated up for this season's breeding our best birds selected from our Auburn winners, nice, rich, even buff, and will book a few egg orders at \$2.50 per 15. See Fancier for Auburn awards. Stephen Westlake, 17 Union St., Auburn, N. Y. 96-47

BARRED ROCKS.—14 GRAND MATINGS, 7 for cks., 7 for pullets; Madison Square winners in both matings. Birds scored at 1905 show, by leading judges, from 93 1-2 to 95 1-2 for females. Eggs, \$3 straight, per setting. C. H. Shaylor, Lee, Mass. 94-45

BLUE BARRED PLYMOUTH ROCKS, exclusively Bradley Brothers' strain, double matings, prize winners. We aim to please our customers. Eggs from choicest matings, \$3 for 15; \$5 for 30. 60 per cent hatch guaranteed or duplicated at half price. Incubator eggs, \$5 per 100. S. D. York, Deposit, Broome Co., N. Y. 52tf

WHITE PLYMOUTH ROCKS. FISHEL'S are the best in the world, winning more prizes at World's Fair than any other two White Rock Exhibitors. My new 48-page catalogue is the finest poultry catalogue ever issued. Send three 2-cent stamps for a copy. 5,000 birds to sell. Address U. R. Fishel, Box D, Hope, Ind. 532tf

EDDY'S BUFF ROCKS EXCLUSIVELY.—I have three hundred breeders mated for best results. Extra good layers. Eggs, special mating, three dollars per thirteen; regular \$2 layers, \$1. Discount on large orders. The Poplars, D. B. Eddy, Prop., Somerset, Mass. 94-tf

RIDGELY'S BARRED PLYMOUTH ROCKS, won at Herald Square and Madison Square. Birds and Eggs for sale; eggs, \$3 per 13. Joseph Phipps, Mgr., Towson, Md. 01-52

WORLD'S FAIR WINNERS.—COCKS, Cockerels, Pullets, for sale. Clean sweep wherever shown. Six first prizes at Poughkeepsie; more prizes New York State Fair, 1904-05, than twenty competitors combined. Cockerels, three dollars up; pullets, two. Edgewood Farm, Ballston Lake, N. Y. 588-tf

400 BARRED P. ROCKS, BRADLEY BROS. strain; pure fine stock. Write for prices and show-room record. Blue Barred Farm, Box 40, Changewater, N. J., F. H. Castner, Prop. 527-tf

BUFF ROCKS.—WINNINGS AT MADISON Square Garden, New York, January 2-6, 1906, 1st and 2d pens and 3d pullet. At Hagerstown, Md., Oct. 13-16, 1905, 1st and 2d pens, 1st cock, 1st and 3d hens, 1st and 2d cockerels, 4th pullet. Eggs for sale from best selected pens, \$3 per 13. George Fox, Torresdale, Phila., Pa. 638-47

WHITE ROCKS. WINNERS OF WHITE Rock Silver Cup at Lititz, Dec. 05. Eggs from prize matings, \$3 and \$1.50 per 15. J. D. Koons, Northampton, Pa. 35-86

BUFF ROCKS EXCLUSIVELY. MATED for the best results; headed by even Buff cockerels, sired by 1st prize cockerel. Madison Square, 1905. Winners of 19 prizes, 7 Specials, on 19 entries this season. Eggs, \$2 per 15. Geo. W. Hatt, Mohn's Store, Pa. 641-646

KERLIN'S BUFF ROCKS ARE GREAT layers and prize winners. They have size and shape, are solid Buff. Winners at Boston and Scranton, 1906; Herald Square, N. Y., and Harrisburg, 1904-5. Eggs, \$1.00 per 13; \$6.00 per 100. Mrs. Bertha M. Kerlin, Box 20, Douglassville, Pa. 642-647

BOUCK'S BARRED ROCKS AT AU-burn and Schenectady, 1905, won 9 firsts, 9 seconds, 2 silver cups. This season at Auburn, Frankfort, Schenectady, Gloversville, Herkimer, 5 regular, 35 special prizes. Best eggs, \$3 per 15; \$5 per 30; incubator eggs, \$5 per 100. Arthur G. Bouck, Frankfort, N. Y.

BOUCK'S BARRED ROCKS AT AU-burn and Schenectady, 1905, won 9 firsts, 9 seconds, 2 silver cups. This season at Auburn, Frankfort, Schenectady, Gloversville, Herkimer, 55 regular, 35 special prizes. At Frankfort I showed nearly all fresh birds and won 6 firsts, 6 seconds, \$25 special for best pen; special for best pen; special for best cock in show; special for best old pen in show; special for best bird in American class. Nearly 100 Barred Rocks in show. Best eggs, \$3 per 15; \$5 per 30; incubator eggs, \$5 per 100. Arthur G. Bouck, Frankfort, N. Y. 643-650

BARRED ROCK EGGS FOR HATCHING, Bradley Bros. Strain, \$2.00 per 15; \$10.00 per hundred. The remembrance of quality remains long after price is forgotten. I. W. Jenkins, 416 Stuart Ave., Syracuse, N. Y. 640-52

STEP LIVELY, AND GET IN LINE for some of Ladnarc Farm's winning Barred Rocks. If you don't need any stock, perhaps a setting or two of eggs would give you the start you have needed. Cockerel and pullet bred male for disposal. Mating circular on application. Ladnarc Farm, L. S. Crandell, 12 Steuben Park, Utica, New York. 642-645

BARRED ROCKS.—FAMOUS "RING-let Strain." Will replace every infertile egg. Pens carefully mated. J. L. Wilson, "The Portland Farm," Port Chester, New York. 642-54

BARRED PLYMOUTH ROCKS.—MATED particularly to produce grand females. Winners at Boston and Lenox. Why pay \$5.00 upward when you can get as good for less. Eggs, \$3 per 13; \$5.00 per 26. W. J. Welsh, Lenox, Mass. 643-656

BUFF PLYMOUTH ROCKS EXCLUSIVELY, winning reputation Danville, Shelbyville, Frankfort, Lexington, Louisville, Cincinnati, Ohio Championship Color Special on Pullets, Kentucky State Fair, 1905. Birds sold with score cards. Low combs, fine shape, good color. Eggs, \$2.00 per 15. Satisfaction guaranteed. W. B. Buford, Nicholasville, Ky. 643-648

WHITE ROCKS.—EGGS FOR HATCHING. Dotshome Strain, established twenty-five years, \$1.00 per fifteen. Cedar Hill Poultry Yards, Chas. H. Board, Washingtonville, Orange County, New York. 643-646

AN UNPARALLELED OPPORTUNITY. Eggs for hatching from Barred Rocks at \$2.00 per set. Bradley Bros. Strain direct and everyone a hummer. Winning 1st cock, 2d hen, 2d pullet at great Gloversville Show. A few No. 1 show and breeding pullets yet to spare. John C. Rice, Johnstown, N. Y. 643-655

A BARGAIN IN THIRTY BARRED Rock Pullets, to make room, hatched last April, fine size and laying well, cockerel bred, Bradley Strain, pure. Eggs for hatching from standard mating, related to N. Y. winners, 1906. Write. W. L. Elsea, Berryville, Va. 643-45

PARTRIDGE PLYMOUTH ROCKS.—Eggs from prize winning stock, \$2 per setting; 3 settings for \$5; \$8 per hundred. Our birds are large and well shaped. Fine cock, 2 years old, for sale, \$3. Satisfaction guaranteed. C. P. Averill, Foxboro, Mass. 643-645

EGGS FROM STRICTLY FIRST-CLASS stock in Barred Rocks, Buff Leghorns, winners at Madison Square; 2d Buff cockerel, also color special. At Auburn, 1st cock, 1st cockerel, 1st pullet, 2 pen, young. Eggs, \$2.00 per 15. Hovey & Fairbank, 9 West St., Utica, N. Y. 644-656

WHITE PLYMOUTH ROCK WINNERS.—Line bred for years. 2d cockerel, Grand Central Palace Show, in class of 16. We have no room for culls. Eggs for hatching, \$3.00 per 15. Knickerbocker Poultry Yards, Englewood, N. J. 644-646

MASON'S BUFF ROCKS WERE THE largest winners at the St. Louis World's Fair. An unsurpassed show record for the past six years. Four grand pens mated for the occasion. Eggs, \$5 per 15; \$25.00 per 100. H. P. Mason, Buff Rock Specialist, Fayette, Mo. 644-646

BARRED PLYMOUTH ROCKS.—CHAS. M. Griffin & Son, Shelter's Island, N. Y. 644-651

BARRED PLYMOUTH ROCKS.—BRADLEY Bros. Strain, pure. 95 prizes, 1905-06. Nine breeding pens mated for this year. Mating list gives photographs of the males heading each pen; also winnings. Eggs, \$2.00 per 13. Blue Barred Farm, Box 40, F. H. Castner, Prop., Changewater, N. J. 640-666

WINSLOW'S BARRED AND WHITE Plymouth Rocks—White & Graves Strain. Won 37 regular and special prizes on 27 entries against strong competition. Barred have a record of 236 per hen in customer's hands. Choice selected eggs, \$3.00 per setting. A. P. Winslow, Box 2542, Freeport, Me. 645-647

WYANDOTTES.

SILVER LACED WYANDOTTES.—A few fine cockerels for disposal. At the great Rochester show, 1905, we won 1st cock, 3d cockerel, 3d hen and 4th pullet; classes all full. Eggs from best matings, \$2 per 13. Write for prices on stock. A. V. Fowler, Brockport, N. Y. 94-45

HICKORY GROVE POULTRY FARM, Tionesta, Penn.—Home of some of America's best White Wyandottes; winners wherever shown. Winners at the late Pittsburg Show. Stock for sale at all times. Eggs in season at \$2.50 per 15. C. J. Killmer. 02-53

IT IS IN THE AIR; THIS WHITE Wyandotte fever, one cannot help catching it. The real worth of the breed, the real beauty as well, appeals to all. You are interested and want to know where to get stock or eggs of the best. Why not try a short cut and come to headquarters the first jump; to the acknowledged leading White Wyandotte Specialist for ten years past. Eggs, \$5.00 a setting; two for \$8.00; three for \$10.00. Two-cent stamp for catalogue. Arthur G. Duston, 34 High St., So. Framingham, Mass. 600tf

FOR SALE.—BLACK WYANDOTTES and Pekin Ducks. Winners at New York, Boston, Cincinnati and Cleveland, in 1906. Eggs in season, \$3.00 per 15. F. C. Sites, North Dover, O. 639-51

SILVER PENCILED WYANDOTTES. Some very fine young stock from Sanatoga, Lititz, and Newark winners for sale; also one cock and two hens. L. B. Custer, Parker Ford, Pa. 594-645

PARTRIDGE WYANDOTTES.—GRAND exhibition and breeding stock from my Madison Square winners, 1905. Cockerels fit for any competition. T. W. Schofield, 685 No. 7th St., Newark, N. J. 633-645

BUFF WYANDOTTES EXCLUSIVELY. Have won at the following shows: Auburn, Rochester, Lockport, Schenectady and New York State Fair. Young and old stock at reasonable prices. Orders booked for eggs at \$2.00 per 15. Satisfaction guaranteed. Mention Fancier. C. W. Augenstein, 53 Culver Road, Rochester, N. Y. 600-51

SILVER-LACED WYANDOTTES.—35 cockerels and 100 pullets for sale. I have won my share of the ribbons at Trenton, Hagerstown and Portland this fall. Send for circular. H. F. Chase, Box 77, Andover, Mass. 636-53

SOME ELEGANT SILVER WYAN-dotte Cockerels for sale at \$3.00 and up. Remember we always breed our own winners and show them in strongest competition, winners at Madison Square, Chicago, Hagerstown, Rochester, etc. Write Matthias Bros., Tonawanda, N. Y. 634-46

GOLDEN WYANDOTTES.—MADISON Square, 1906. We did it. 1, 3, 4 Cock, 2, 3 Hen, 1, 3 Cockerel, 2, 4 Pullet, 1st Pen. \$100.00 Cup best ck., hen, ckl, pul. in show. All Wyandottes competing. The largest and best class ever there. Single birds or breeding pens. Eggs. Circular. Telephone. Charles H. Brundage, Danbury, Conn. 91-tf

SILVER, GOLDEN, BLACK AND PAR-tridge Wyandottes. Line-bred New York and Boston winners. Stock and eggs for sale. Circular free. J. M. Lotridge, Cincinnati, N. Y. 637-46

MADISON SQUARE GARDEN WIN-ners.—We have won 1st and 2d prizes four successive years at the above show on our White Wyandottes. Eggs, \$3 per 13; \$5 per 26. Incubator eggs, \$5 per 100; \$40 per 1,000. Booklet free. Allen C. Roberts, Parkerford, Pa. 556-tf

BUFF WYANDOTTES EXCLUSIVELY. Madison Square, 1905, 1st Pullet, 2d Cockerel and 3d Hen, and at Auburn, N. Y., the Buff Wyandotte State Cup. 1906, Madison Square, 1st Cockerel and 1st Hen, and again at Auburn, N. Y., the 1906 Club Cup. Stock and Eggs in season. Write for mating list. J. H. Scott, Auburn, N. Y., R. F. D. 9. 600-651

WHITE WYANDOTTES.—MANY prizes won at Schenectady and Albany Shows, 1905. Again at Albany, 1906, in competition with 180, won 1st cock and 3d pullet. Eggs from stay-white stock, \$2 per 15; \$3 per 30. Write. Edward Preisser, 133 Sherman St., Albany, N. Y. 640-645

WHITE WYANDOTTES.—ELEGANT stock; the stay-white kind. At Rochester Show, 1906, on 4 entries won 1st, 3 2ds and special. Auburn Show, 1906, on 7 entries won 4 1sts, one 4th, two 5ths, and 22 specials, including special for whitest bird, special for best exhibit White Wyandottes and Grand Sweepstakes Special for best male bird in the show. Eggs, \$2.00 per 15. Fred C. Lisk, Box 47, Romulus, N. Y. 601-52

PARTRIDGE WYANDOTTES.—AT Scranton Show, Jan. 15, 1906. Show second only to New York or Boston, my birds won first and third on cock, first on cockerel, first and third on pullet, also cash special on cock for best Partridge Wyandotte bird in the show. A few sittings from my best prize matings, \$3.00 per 13. W. H. Hagen, Scranton, Pa. 640-647

COLUMBIAN WYANDOTTES FOR Sale. 1 trio, \$7.00; 1 trio, \$15.00; 1 trio, \$10.00. Eggs, \$2.00 per 13; \$5 for 40. Rowland G. Buffington, Somerset, Mass. 640-45

HOWELL'S WHITE WYANDOTTES.—Won four 1sts and one 2d and nine Specials at Rochester, 1906. Club cash special for whitest male, 1904. Trap nests used five years to increase egg production. Eggs for hatching. Wm. L. Howell, Box H, Geneseo, N. Y. 640-tf

BUFF WYANDOTTES EXCLUSIVELY. Our Buffs again demonstrate their superior quality by winning at Madison Square on 3 entries, 1st pullet, 2 cockerel and 3d hen. At Auburn in competition with the best breeders. State Cup for best display, also 2-3-4 cock, 1 cockerel, 1-3-4 hen, 2-3-5 pullet, 2-4 pen. Write for prices on stock and eggs. J. H. Scott, R. F. D. No. 9, Auburn, N. Y. 00-51

WHITE WYANDOTTES.—EIGHT choice cockerels for quick disposal. Big white birds. The kind for results as breeders. Bred from prize winners, \$5.00 up. Eggs, \$3 per 15. L. P. Clark, Supt. Rosemary Farm, Huntington, L. I., N. Y. 641-652

TWENTY YEARS WITH THE SILVERS. We could not live without them, and having secured the cream of our stock. We offer a limited number of settings. They have been winning the Blue Ribbon with us and our patrons in the leading shows of America and Canada the past 12 years. There's no stronger blood line on earth. W. E. Samson, Forest City, Pa. Formerly of Pleasant Mt., Pa. 641-692

SILVER, BUFF, PARTRIDGE AND SIL-ver Pencilled Wyandottes. First prize winners at New York. Stock for sale. Eggs, \$3 per setting. Satisfaction guaranteed. Fernwood Farm, Litchfield, Conn. 641-652

ON SILVER-LACED WYANDOTTES AT Boston Show, 1906, we won every first but one. Have won more prizes on our Silver, Golden and Buff Wyandottes the past ten years than all others combined. Price of eggs from each variety, \$3.00 per 15; \$5.00 per 30. Catalogue. Wood & Freeman, Fitchburg, Mass. 641-tf

SILVER WYANDOTTES.—WINNERS, 15 out of possible 16 firsts at Boston and New York. Have type, color, lacing, size. Twenty-four years. Write for mating list. Eggs, \$3.00 per setting. Less than eight chicks, half price. J. C. Jodrey, 148 Locust Street, Danvers, Mass. 646-tf

WHITE WYANDOTTES.—SEE WHAT Drev. says of my first prize cockerel, at Schenectady, in Fancier of February 17, page 4. Eggs from mating headed by prize winners, \$2.00 per 13; \$5.00 for 39. George R. Schaubert, Box A, Ballston Lake, N. Y. 642-654

WHITE, SILVER, BLACK, SILVER Pencilled, Partridge, Buff, Golden. Have bred Wyandottes twenty-five years. Helped make Standard for all varieties. My twenty-eight matings include many prize winners. Eggs, \$3.00 per setting; four settings, \$10.00. T. E. Orr, Box 7, Beaver, Pa. 642-67

COLUMBIAN WYANDOTTE EGGS from winners; first ckl., first pullet, New York; first, third, and sixth ckl.; first, second, fourth and sixth pullet; first and sixth hen; fifth cock, at Boston. Eggs, from \$2.00 a setting. Send for circular. Prof. John Evans & Son, Meshanticut, R. I. 642-654

COLUMBIAN WYANDOTTE EGGS from 200 selected females. Each pen headed by a wonderful male, same as our Madison Square winners. Remember this strain is the foundation of the Columbian Wyandotte of to-day. Eggs, \$3.00, \$5.00 and \$10.00 per setting straight. (Circulars). McIntosh & Burgess, Hope Valley, R. I. 642-657

WHITE WYANDOTTES.—SNOW white, wonderful layers, very hardy, housed in cloth front houses all winter. Two pens, containing Newark, Paterson and Rutherford winners. Eggs, \$1.00 and \$2.00 per 13. Need room, must sacrifice some pullets. Arthur Gies, 795 Summer Ave., Newark, N. J. 645-647

HADAWAY'S PARTRIDGE WYANDOTTES won the past season—\$100 Championship Cup and four firsts at Brocton; \$75 Breeder's Challenge Cup and Silver Medal best exhibit at New York; \$100 Championship Cup and all five firsts at Boston. Send for catalogue. Eggs, \$5.00 per 15; \$8.00 per 30; \$10.00 per 45. J. B. Hadaway, 696 Main St., Brockton, Mass. 645-671

MRS. E. TURNER'S WHITE WYANDOTTES are home bred, winners of many regular prizes, including Ivory Soap Cup, Hagerstown; also prizes and specials at World's Fair. No larger or better shaped birds. (Devoid of black feathers). Eggs \$3.00 for 15. Mrs. E. Turner, 606 Wilkins Ave., Extended, Baltimore, Md. 646-697

"AMERICA'S BEST BUFF WYANDOTTES"—Winners at all the leading shows in the United States and Canada. I have about 300 head of stock for sale. There is a reason why you should buy of me. Let me tell you the reason. Andrew Riddell, (formerly of Piser & Riddell), Box 9, Shushan, N. Y. 624-tf

WHITE WYANDOTTES—EGGS FROM my high-scoring, 95 point birds, \$3.00 per setting; two settings, \$5.00. Some choice birds for sale. Satisfaction guaranteed or money refunded. E. Vandyck, Adams, Mass. 642-647

MY PARTRIDGE WYANDOTTES HAVE been entered at six different exhibits the past season, being placed at every show, winning besides the blues and reds, eight Club ribbons for shape and color. Eggs, \$3.00 and \$1.50 per setting. Frank C. Burbank, Sandwich, Mass. 642-644

WHITE WYANDOTTES—THE STAY white kind. At Wilkesbarre Show, December, 1905, on 4 entries won 3 firsts, one second, two specials; also three club specials. Scranton Show, January, 1906, won 1st pullet and special for best White Wyandotte in show. Also 2d ckl, 2d and 3d hen. Eggs, \$3.00 and \$5.00 per 15. Frederick Christ, Ph. G., 1209 Pittston Ave., Scranton, Pa. 643-655

WHITE WYANDOTTES—STOCK BRED from Madison and Herald Square winners. Fine blocky, pure white birds. Eggs, \$1.50 per 15. L. Leader, Endicott, N. Y. 643-648

BUFF WYANDOTTES—AT BOSTON, 1906. 1, 6 cock, 2, 3 hen, 6 cockerel, 1 pullet, 2 pen. Stock and eggs. Free descriptive circular. J. Eugene Burt, Athol, Mass. 595-646

FOR SALE, BUFF WYANDOTTES—Pullets, and choice ones at that, almost for your own price. Clear wings and tails. Beauties. Eggs from choice pens, \$2.00 per setting. R. W. Dufour, Lakeville, Conn. 643-645

COLUMBIAN WYANDOTTE EGGS, \$3.00 per 13; \$5.00 per 26. Choice breeding cockerels, \$3.00 and \$5.00. Same strain as New York winners. H. C. Keen, Ridge St., Newark, N. J.

STOP! THINK! LISTEN! EGGS AT \$2.00 per setting from White, Golden and Silver Wyandottes. Winners wherever shown, my latest being 1st and 2d hen on Silvers; 1st and Special for best White Cock at late Gloversville, New York Show. Charles Eisenmann, Johnstown, N. Y. 643-655

FOR SALE—TWO LARGE BUFF Wyandottes, Cockerels with buff wings and buff tails, \$2.00 per piece, or will mate them up with two good pullets, at \$5.00 per trio. Piser & Riddell stock. Atwood Kreider, P. O. Box 118, Lititz, La. Co., Penn. 643-645

WINNERS OF PRIZES WHEREVER shown. 1st, 2d, 3d and Special in Torrington, 1903; 2d, 3d, 4th in Winsted, 1906; 2d, 3d, 4th in Lenox, 1906, on old fowls. My birds are the Ideal Wyandotte. Shape and color on every point. They are carefully mated for good results. Eggs, \$2.00 per setting of 13; special prices for larger numbers. Mrs. Geo. Wilcox, Canaan, Conn. 643-54

EGGS OR STOCK—WYANDOTTES—The whole family—true Houdans, Dorkings. Other breeds, and Water-fowl. From winners at New York, Boston, World's Fair, and everywhere exhibited. BEST EGG TESTER

Don't waste time, money, and eggs testing the old way. Use a Pocantico Egg Tester. It positively determines fertility the second day of incubation. It is so made that all light focuses at one point and shows germ unmistakably; is light, convenient and easy to handle. Will pay for itself many times over. Price, complete with lamp, \$2.00. Satisfaction guaranteed or money refunded. Send for illustrated booklet. Pocantico Poultry Yards, Box C Pocantico Hills, N. Y.

Half Grown Chicks

as well as laying hens must be made to work. It's not fat, but growth in the one and eggs from the other that you want. You want a food that answers equally well for both. Use

Darling's Scratching Food,

It Makes the Eggs Come.

Throw it in the litter. You'll be surprised at the industry you'll get out of hens and chicks. They'll do most any amount of work to get it. And they'll be singing all day long. Nothing but the highest grade products in it. Contains the seeds, grains and meat products that their appetite craves, the ones that do them the most good.

Price \$2.00 Per 100 lb. Bag, F. O. B. Chicago or New York, Cash With Order.

For best results you should get acquainted with Darling's Standard Line of Foods. No other so uniform or of such high quality. We guarantee that.

Darling's Beef Scraps and Beef Meal, Bone products and other foods are absolutely fresh and sweet. The following in 100 lb. bags are f. o. b. Chicago or New York: Laying Food, \$2.00; Forcing Food, \$2.00; Chick Feed, \$2.50; Mica Crystal Grit, 65c; Oyster Shells, 60c. Cash with order.

We're Growing. A New York Factory for Eastern trade and a fine, large, new catalog. It shows what Darling & Company are doing in the poultry world. It's a book you want. Free. Address nearest office.

DARLING & COMPANY,

Box 57, Long Island City, New York.

Box 51, Union Stock Yards, Chicago.

At the New York State Fair, Syracuse, N.Y.

Martin's White Wyandottes won more prizes than any other exhibitor. First and 3rd cockerel, 1st and 3rd pullet, 2nd cock, 2nd hen and 2nd pen. This was a most remarkable win, owing to the fact that previous to this show they had been cooped nearly two weeks at the Toronto show, and thus were not in as good condition as the birds they competed with. Finest lot of Stay-White Cockerels I ever bred. Send for catalogue.

NO. 646

JUDGING

BY EDWIN H. MORRIS, SPARKHILL, N. Y.

Poise.

The score-card versus comparison judging has been thoroughly thrashed, yet D. D. Haines, speaking in your issue of March 3d, in relation to my report of the World's Fair Classes, gets some kind of consolation from the fact that it was a comparison report. The critic is compelled to adopt the comparison method for self-evident reasons, yet if worthy of the task he does not disregard the fact that the judge has had an advantage of searching for defects—of scoring or whatever he likes to call it.

In weighing points of excellence against defects, many grave errors are made, and points of vital importance to the breed are frequently left out of consideration, thus undoing what it has taken breeders years to accomplish.

For instance, the Sebright Bantam male, without poise or style, is hardly a thing of beauty, though laced to perfection in all sections. Where is the score card that gives a scale for this? Games and other varieties, in fact, all varieties, need a provision for such, because it is the first point that impresses, and in the Bantam division it is particularly important. The kitchen maid dressed in her mistresses finest gowns does not pass for a lady. If the symmetry is there, the air of dignity of breeding and refinement, giving poise, is almost sure to be absent.

It is still true that "it takes three generations to make a gentleman," in spite of the fact that the possession of wealth, the putting on of airs, and arrogant carriage, sometimes pass for the true thing.

Poise is not only important in the show cage, it denotes in the male a positive masculine element, indicating potency to some degree, and it may be

hasized by conditioning. In the female it may not approach the combative tendency, but it gives an air of dignity and finish. A male, his sex will treat somewhat as they do a female, or a female exhibiting male characteristics, should if the score card had full sway, have penalties. There are positive and negative tendencies in all live stock, and eventually the synthetical must rule.

Therefore the honest comparison judge, with mental capacity, and that intuition which the schools cannot teach, stands head and shoulders above the score card judge.

The former is the artist, instantly recognized as such by those who know, and often a mystery to the uninitiated. The latter makes primitive pictures for the infant class, sometimes gaining admiration. Both have a sphere, yet

Easter Sunday

BY ROBERT T. DENNIS.

Sweet day of festive joy—once more
Time has brought thee around;
We hail thy glad approach with joy,
Our hearts with mirth abound.

Sweet day of festive joy—how few
Thy worth appreciate;
How oft in riot and in sin,
Men thee commemorate.

Sweet day of festive joy—thy date
Doth wonders great unfold;
The dead to life triumphant rise,
The graves no more withhold.

Sweet day of festive joy—for thee
Let all be glad on earth;
Let Zion's sons rejoice, and see
They tremble with their mirth.

Sweet day of festive joy—that gives
Assurance to the blest,
Like Him they'll rise triumphantly
And from all sorrow rest.

Sweet day of festive joy—by thee
Let man learn to be wise,
And know that all who thee profane
Jehovah will despise.

if in this great country, poultry breeding, in any section, has in spite of primitive methods, got beyond the infant industry classification, give us the artist—the judge, who received the eye and faculty from ancestry at birth, just as the birds get poise and other characteristics, such as type and character, from generations of their like, and do not acquire it.

The slob, with the arrogant carriage, is ridiculous.

The other thing, having what is called poise, is sublime.

There is but one step between these two extremes.

Whether the positive and negative tendencies in poultry, have an influence on the sex of progeny (as in the Leghorn family) and possibly on

type and character, may be left for the present. The tout-ensemble and poise of a bird undoubtedly fills the eye of the most capable judge creating a synthetical impression, when beauty of plumage fails. This is right, because though fine feathers add much to the making of fine birds, sometimes soaps, washing powders, and even dyes contribute, and age will show its effects. The effects of age though are too often valued as much as those of heredity, when one is transmitted, and the other may not be.

Fanciers.

We have arrived at a period when American breeders are to test the advancement made by competition with the best of England's experts, yet many of the best judges in

America are so through experience, working on rule, with ability of the acquired nature, while others are a law unto themselves, and the younger element is chiefly, a trained corps, with some knowledge and experience, but lacking in the essentials. Without the eye and mentality to grasp the important points of type, character, poise, etc., it is a case of the blind leading the blind, and shows to some extent fail in their purpose, the awards stand for less than they should, and there is a constant see-sawing which cannot be spelled progress.

It is so with the critics who seem to be afraid to offend judges, editors, exhibitors, or somebody, instead of acting as guides to breeders and the uninitiated, and as a check on the carelessness, lack of ability, or other more serious failings or tendencies, on the part of the judges, or show giving clubs.

It is infinitely better for the general welfare and progress, that the budding judge with some fatal detriment, should not be allowed to blossom forth, for he that is high feels the fall, and when it is yet time matriculation may be taken, or where necessity is apparent, a more suitable course can be adopted, better calculated to insure usefulness and success. The experienced sometimes need bringing down to earth.

It is also a duty of the poultry press to aspire to something higher than padding advertisements with twaddle, or counteracting the influence of show honors by printing only the wins of those who advertise. If he who has the most money, or the most audacity, is to gain prominence, when he who does the real work of the fraternity, in producing birds nearest to the standard, is debarred from the full benefit of hard earned and merited honor, how can progress be insured. "Honors where honors are due" must stand as the keystone to advancement.

When we aspire to honors across the pond, the ethical significance of this will be clear.

It will and should be the fancier and against the fancier, not dollars against pounds.

The aim should be to develop the fanciers instincts, to foster and encourage, rather than with brazen affrontry, place dollars as a barrier to the full play of the law of the survival of the fittest.

The stability of character, the love of home, of those of Northern Europe, may be distinctly traced to the devotion to hobbies, which insures the instincts of the fancier, the development of live stock, and it is these qualities which contribute so much to the mak-

ing of desirable citizens, therefore, "the links which bind" should be of sterling metal. The almighty dollar often serves a base purpose, the instincts of the rowdy, ne'er-do-well running wild element generally prove disastrous, needing the other element to give poise to the national character.

By insuring such by exhibitors and all the influences at command, the fraternity becomes something more than purveyors of a commodity.

Type.

Type is an ensemble of traits in the individual. In the family it is an ensemble of the most often repeated traits, or the most important ones.

Isidorns G. Saint-Hilaire said, "the type of a species never appears before our eyes, but is perceived only by the mind." Goethe terms it "the abstract and general image," and Gratiolet says it is a "synthetic impression."

The various clubs devoted to particular breeds arrange elaborate standards, with scales of points, in order to give this image or impression. The American Poultry Association circulates such, with the artist's idea, gained not so much from the printed matter, as from the exemplars. The exemplifications taken from life from specimens gaining honors under judges of experience, should stand for as much, as the standards, provided they are taken when the birds are as they were judged, and the artist is capable of getting the poise and character, and does not draw on his imagination for type.

Type is a word that even the most experienced judges and exhibitors do not fully understand, or properly apply. The term has been used indiscriminately to the confusion of the novice, and oft times to cover the deficiencies of the judge, sometimes referring to outline, poise, character and even color, and the enquiring beginner too frequently gets type alone for consolation and guidance at the shows, and when he tries to find out what it all means, in the poultry paper's criticisms of the awards afterwards, it is still type, and this time quite black.

Clubs cannot fully advance the breeds, in the broad sense of the term, without due attention to the correct exemplification of type.

Until the idea of type is carried so far that a specimen becomes a standard example, in the general estimation of experts, no synthesis will be reached.

This is an age when analysis and synthesis should impress all who have to decide such matters. The time of the superficial judge and critic of live stock has passed, and if this country really intends to take the place of England in supplying all creation with typical specimens, New York must not be contradicted at Boston, and Chicago must not have a still different type.

Fanciers have been accused of spoiling everything they have touched, by producing montrosities.

The Japanese supply an admirable instance of this, unlike the English—who are justly renowned as breeders—who never approached them in the production of unnatural things—montrosities, either in birds, fish, dogs or plants.

It is only by the use of common sense, and with it the maintaining of a proper conception of type, that such extreme can be avoided.

The terse American phrases of "don't be a clam," "don't be a lobster," indicate that some common sense is

still in stock, but "don't be a Jap," can be applied to some fanciers.

At present there is one type for Barred and another for White Plymouth Rocks, and very little to indicate type in some other branches of the family, leading to the question whether a qualification for admission to the standard, should not be something more than at present.

It is so in Wyandottes. Birds with Cochin type can win if of one color, and another resembling a Leghorn can score in some other branch of the family.

In Houdans, where some play is given to imagination, a Polish Crest, like a damp mop, Creve shanks, and on outline character and poise not of the breed, has become accepted, and a Frenchman would not know his favorite breed in this country.

Experience and integrity should be characteristics of judges, yet these alone will not take the place of other qualities absolutely necessary to prevent the ruination of highly meritorious branches of the species, to prevent shows being looked upon by those in the commercial branch, as something outside and apart from the industry, and causing farmers at the country fair shows to hold aloof, considering it a game wherein one crank meets another crank, in a contest requiring special education.

These latter are minor considerations that should not be overlooked, in conserving the major point of giving due weight to the ensemble of traits called type.

HEN SET THROUGH FIRE AND WATER.

(New York World, April 9.)

The hen which withstood the flames, smoke and water during the Trull Hospital fire in Biddeford, Maine, and sat on her nest until the excitement of that eventful day was over, has been rewarded for her faithfulness by hatching one chick. In the same fire the surgeons finished an operation, in which a life was at stake, while the building was burning over them and firemen were working to keep the flames back until they finished.

That the surgeons were not without rivals in heroism was discovered after the fire was out and the cellar full of water. The firemen, wading in the hospital basement, found a box floating upon the "bounding billows," and in it Biddy and the thirteen eggs, upon which she had been placed the week before. She had remained as steadfastly at her post as had the life-savers on the floor above. No setting hen ever showed greater determination to perpetuate her race than this bidy when the firemen tried to pull her off her floating nest.

The eggs had been chilled in the almost ice-cold water which had soaked up through the straw nest, and there was slight hope of any hatching. But a hen that would set through fire and water, the hospital folk declared, should not be a martyr to the practicability of a cruel world, so the box was put up high and filled with new dry straw and Biddy was left to do what she could with the wet eggs.

The hospital people speculated two weeks ago on the outcome. "If they hatch the chicks will have web feet," declared the chicken fancier who owned the hen. He missed his guess, for the one resulting chick is perfectly formed—a little black ball of fuzz—and its legs are not icicles.

AUBURN WINS.

The vote on place of meeting closed on April 2, 1906, with the result as given below.

For New York City—Grant M. Curtis, Charles H. Welles, M. F. Delano, Aug. D. Arnold, Wm. McNeil, H. V. Crawford, W. R. Wooden, D. Lincoln Orr, George W. Mitchell, J. B. Thomas, Jr., Frank Heck, F. B. White, W. S. Russell, T. A. Hefner, W. A. Doolittle, Frank Gaylor, George O. Brown, Philander Williams, Henry S. Ball, C. M. Bryant, Wm. F. Whiting, Lester Tompkins, George Purdue, A. L. Sparks, E. B. Thompson, Dr. A. H. Phelps, W. F. Brace, J. H. Drevenstedt, George H. Burgott, W. C. Denny, E. G. Wyckoff, T. F. McGrew, F. C. Shepherd, Richard Oke, E. A. Weimer, Charles T. Cornnan, Daniel Henry Hales, D. A. Holzhauser, Henry Hales, D. A. Nichols, F. L. Sewell, Dr. N. B. Aldrich, Thomas F. Rigg.

For Auburn, N. Y.—George D. Holden, Eugene Sites, Theo. Hewes, John C. Grothers, F. H. Shellabarger, F. J. Marshall, J. Y. Bickness, Dr. Benjamin McInnes, George G. Bates, T. E. Orr, Charles McClave, Dr. F. D. Kendall, Charles R. Harker, Henry Berran, Mrs. O. H. Burbridge, J. C. Williams, John K. Ottley, O. L. McCord, J. C. Pratt, Daniel Robertson, H. H. Fike, F. L. Kimmey, Ben. S. Myers, S. B. Lane, U. R. Fishel, W. C. Pierce, Wesley Lanius, Sid Conger, M. F. Norris, George E. Lindsay, Frank W. McKensie, James Tucker, George S. Barnes, E. W. Rankin, E. H. Smith, E. S. Person, C. L. Smith, Henry Steinmesch, B. E. Johnson, W. W. Henderson, C. A. Morton, Dr. J. C. Andrus, C. C. DePuy, F. B. Zimmer, C. E. Howell, Henry Trafford, Prof. James E. Rice, E. H. Knapp, F. E. Pile, Julius Frank, Theo. Campbell, Charles C. Reid, G. R. Haswell, Sharp Butterfield, A. P. Groves, J. P. Hildorfer, F. H. Cook, W. H. Mason, Dr. S. T. Lea, J. N. Crow, E. G. Roberts, J. B. Garvin, D. T. Heimlich, J. C. Fishel, George Ewald.

Ft. Wayne, Indiana, had presented an invitation and received quite a complimentary vote; but that Association, finding that a large majority of the executive committee favored a location farther east, and knowing that its vote might cause a delay by preventing a majority vote for either New York or Auburn, withdrew from the contest and notified its promised supporters to change their votes to one or the other of these two cities. The following named gentlemen failed to take advantage of this notice, so their votes stand recorded for Ft. Wayne: W. H. Bushell, R. H. Peck.

Refrained From Voting—James P. Kerr, Jesse B. Riggs, C. H. Latham, John Smith, A. F. Pierce, C. A. Cyphers, Ira C. Kellar, A. F. Cooper, Wm. E. Bright, Dr. E. A. Kegley.

Summary of the Votes—For Auburn, 65; for New York City, 43; for Ft. Wayne, 2; not voting, 10; total membership of Executive Committee, 120. Therefore, in accordance with the above, we announce that the thirty-first annual meeting of the American Poultry Association will convene at Auburn, New York, during the week of January 7, 12, 1907, definite time and place to be announced later.

GEORGE D. HOLDEN,
President.

T. E. ORR,
Secretary-Treasurer.

April 3, 1906.
Committee to Revise Constitution

and Form Outlying Districts—At the Cincinnati meeting a committee of fourteen was appointed for the above purpose, to take as a basis of operations the changes suggested by Mr. Baerman in advance of the Cincinnati meeting. This committee is composed as follows: F. L. Kimmey, Morgan Park, Ill., chairman; Grant M. Curtis, Buffalo, N. Y.; H. B. Donovan, Toronto, Canada; J. H. Shedd, Knoxville, Tenn.; H. V. Crawford, Montclair, N. J.; Theodore Hewes, Indianapolis, Ind.; Lester Tompkins, Concord, Mass.; T. E. Orr, Beaver, Pa., secretary; George D. Holden, Owatonna, Minn.; Henry Berran, San Jose, Cal.; W. F. Whiting, Holyoke, Mass.; D. Lincoln Orr, Orr's Mills, N. Y.; Thomas F. Rigg, Iowa Falls, Iowa; F. D. Baerman, Dune

N. J. The secretary is directed by the chairman to call this committee to meet at Detroit, Michigan, at a place of which each will be notified later, on Tuesday morning, Aug. 6, 1906. Each member is requested to bring with him, ready for consideration, all suggestions and requests that he or members from his section may have to offer, so that the work may proceed promptly toward definite and profitable results.

T. E. ORR,
Sec'y-Treas., A. P. A.,
Beaver, Pa.

SCHILLING'S STORY.

Editor American Fancier:

Recently there appeared in the columns of your editorials a notice of the sale of the entire stud of Buff Cochin Bantams, owned by A. & B. Schilling, to F. A. Radford. Since that time Mr. Radford has been advertising Schilling's Buff Cochin Bantams as ALL purchased by himself, including Boston, New York and Hagerstown winners. In justice to the parties who really own most of these winners advertised by Mr. Radford, I take this means of making known the facts of the sale and the actual owners of the winners advertised by Mr. Radford.

I have written Mr. Radford several times regarding this matter, but he has failed to reply, and I believe it is high time such misrepresentations as this advertisement are stopped and the real facts exposed. Mr. Radford purchased thirty-three Cochin Bantams from this stock, and included in these were just two winners, viz.: Second Boston pullet, and first Hagerstown and Syracuse cockerel, of 1906. The balance of the Boston winners were retained, together with other winners, including the \$100 Champion Challenge Cup winner, of 1905, at Boston. These birds are now owned by Mr. Prager and myself and will be added to the already strong stud of Blacks and Buffs owned by Mr. Prager, of Norwood Park, Ill. As to New York winners, Mr. R. never secured a single one in this flock, and he had a thorough understanding of the facts. Therefore, I believe it is in order for Mr. Radford to give us an explanation of the origin of his dream, for I have failed to secure this by correspondence. Rock Hill Poultry Farm purchased six birds from this stock and paid more for these than Mr. R. paid for his lot. In this purchase were included birds that won at Hagerstown and New York.

It would also be in order for Mr. Radford to give us his excuse for advertising New York and Hagerstown winners, as well as the Boston winners of 1906.

A. O. SCHILLING.

AWARDS AT CINCINNATI SHOW.

Light Brahmas—Cock 1 College Hill Poultry Farm; 2 C. N. Purdy, 3 Elkhorn Poultry Yards; hen 1, 4 Mrs. Ed. Klever & Son, 2, 5 Purdy, 3 Elkhorn Poultry Farm; ckl 1, 3, 4 Mrs. Klever & Son, 2 College Hill Poultry Farm, 5 Wm. L. Sticke; pullet 1, 3 Mrs. Klever & Son, 2 Purdy, 4 Elkhorn Poultry Yards, 5 Jas. Holt, Jr.; pen 1 Mrs. Klever & Son.

Our Washington Representative.

We have appointed Harry H. Collier, Tacoma, Washington, as our agent for the State of Washington, for both advertising and subscriptions. Harry H. Collier is one of the best known fanciers in that far Northwestern state. He was formerly publisher of

Spring Work Among The Poultry

One of the first things which the housewife thinks of during the first warm days is house cleaning, and this is indeed an essential to the inmates of the poultry house. Be it ever so well kept during the winter, with warm days there is needed a renovation.

Remove all droppings from perches and droppings board. If the floor is of earth, scrape up with the hoe all superfluous litter and other material. If it is warm and sunny enough that it will dry in a day, spray thoroughly with kerosene emulsion or strong suds made from carbolic soap; but if there is danger of the house not getting dry before night with doors and windows open wide, better postpone the liquid application until later, for a damp hen house will check the laying propensities of the best hen, to say nothing of the danger of contracting roup. In the latter case dust thoroughly with insect powder, and if the house is tightly closed for a few hours and sulphur or brimstone burned, the mites will be pretty nearly finished.

To do this safely have ready an old kettle placed near the middle of the open space. Fill partly full of live coals. Hold your breath while placing the sulphur, and then retreat without taking a breath. Close the door tight and let the sulphur fumes do their deadly work. Air the building thoroughly before time for the chickens to go to roost.

Never allow a bit of fertilizer to go to waste. As much as can be taken up on the hoe at once worked into each hill of cabbage will several times repay the extra labor. Poultry droppings worked into the onion bed will produce excellent results; and if tomatoes are slow about ripening this will bring them on in fine shape. The cucumber patch will also thrive by an application; but being such a condensed fertilizer, care must be taken to have it thoroughly mingled with the soil lest bad results follow. With this precaution I have never found any danger in using it freely. Plum and other fruit trees may likewise be benefited by an application. In fact, those who omit this by-product in summing up the proceeds of the poultry yard do a great injustice to the fowls.

The question of fertility is one which is liable to cause some unjust criticism especially with the owner of the new incubator. Ten per cent. of infertile eggs seems a great deal more than the two or three eggs which the old hen refuses to hatch, simply because things are on such a large scale. Besides, the fault may not be entirely with the eggs. The novice is always in a hurry to get the machine started, and sometimes fills it before fully understanding its control. A few extra degrees of heat or a corresponding reduction in temperature for any length of time can scarcely fail to impair the vitality of the germ. In fact it is more sensitive during the first than the second week of incubation. If it is destroyed on the start the beginner thinks the eggs were defective. Be sure the fault

does not lie at your door instead of with the one of whom you bought your eggs.

Of course there is much in the breeding stock. The hen will hatch eggs that the incubator will not—that is, if she is a first class hen. As for the medium one, the machine will hold her level; and the unruly hen which we all find occasionally is not at all to be compared with a good machine for reliability. But to return to the subject of good stock: The breeding birds should be the best of the flock, not culled left after selling the best of the flock because they would command a better price. Infuse new blood every year, and let it be good blood. Farm raised poultry, with wide range, is surer than the fancy birds kept in close quarters. Winter eggs are less reliable for hatching than those of early spring. If the fowls have been kept on a variety of food, are free from disease, are not inbred, and have plenty of exercise, there need be no great trouble about lack of fertility in eggs.

Do not omit the dust bath as soon as pleasant weather comes. Fowls having free range will still come back to the dust box frequently and enjoy it. They enjoy scratching in the fresh earth, but they likewise enjoy flopping in earth which is thoroughly dry.

Things to Remember.

A little flax seed with the morning meal will make the plumage shine.

Milk is excellent for laying hens, as it contains constituents of the white of eggs.

Old hens lay larger eggs than pullets and their eggs produce stronger and more vigorous chicks.

It is not the largest turkeys that bring the highest prices, but rather those of medium size, but in a fat, plump condition.

Whitewash is better than paint on the poultry house for the reason that it costs less and has the purifying influence as well.

It pays to feed the young fowls liberally until well grown. Once stunted they never regain their vigor even by the most careful feeding.

If an abundance of good sharp grit is constantly within range of the fowl the many ailments that spring from indigestion could be prevented.—American Poultry Advocate.

"The winnings of our advertisers were:" This is a paragraph that will never be found in The American Fancier, albeit it is taken from a very prominent poultry journal. If The American Fancier cannot print all of the awards, it will not print any. It is simply a case of a square deal for the little fellow as well as the big fellow with The American Fancier.

Don't breed from immature pullets, and never breed from a weak bird.

A patch of artichokes will furnish excellent greens for poultry, but don't forget the poultry while you are raising the artichokes.

DATES CLAIMED.

Under this heading there will appear each week a list of all the shows claiming dates for the coming season. Secretaries of poultry, pigeon and pet stock exhibitions will confer a favor by sending in the dates selected as promptly as possible. It is not only a convenience and guide to secretaries of shows that have not selected their dates, but of great interest to readers of The American Fancier, a majority of whom are exhibitors.

The name of secretary and judges will be appreciated when sending in notices.

Aug. 21-24—Cortlandt, N. Y. Cortlandt County Agricultural Society, W. J. Greenman, Secretary.

Nov. 12-17—Houston, Tex., Hewey S. Fox, Jr., Secretary.

Nov. 12-17, San Jose, Cal. Santa Clara Valley Poultry and Pet Stock Association, E. Van Every, Secretary, Edenvale, Cal.

Dec. 3-9, San Francisco, Cal. California Poultry Association, J. C. Williams, Secretary, Fruitvale, Cal.

Dec. 4-8—Youngstown, O., H. J. Cossler, Secretary.

Dec. 4-8—Wilkes Barre, Pa., David T. Miller, Secretary.

Dec. 4-8—Providence, R. I., Rhode Island Poultry Association, W. I. Brown, Secretary, 6 Exchange Place.

Dec. 5-8, Grand Rapids, Wis. Grand Rapids Poultry Association; B. G. Eggert, Secretary; Frank Heck, Judge.

Dec. 5-8, Paterson, N. J. Paterson Poultry, Pigeon and Pet Stock Association; Charles Frost, Secretary.

Dec. 6-9—Danbury, Conn., C. H. Brundage, Secretary.

Dec. 11-14, Lewistown, Mo. Lewistown Poultry Association; A. O. Brooking, Secretary, La Belle, Mo.; Frank Heck, Judge.

Dec. 12-14—Kingston, N. Y., F. E. Miller, Secretary, Rifton, N. Y.

Dec. 12-15—Corsicana, Tex., W. E. Elliott, Secretary, Box 281.

Dec. 12-15, Fresno, Cal. Fresno Poultry, Pigeon and Pet Stock Association, George R. Andrews, Secretary.

Dec. 12-15, Stoughton, Wis. Stoughton Poultry Association; Sylvanus Ames, Secretary; Frank Heck, Judge.

Dec. 19-22, Holland, Mich. Holland Poultry and Pet Stock Association; L. S. Spritsma, Secretary; Frank Heck, Judge.

Dec. 19-23, Mohnsville, Pa. Wyomissing Poultry Association; George W. Hatt, Secretary, Mohn's Store, Pa.; Charles T. Cornman, Judge.

Jan. 7-11, Aurora, Ill. Aurora Poultry Association; Walter M. Smith, Secretary; Frank Heck, Judge.

Jan. 8-11, Middletown, Conn. Middlesex County Poultry, Pigeon and Pet Stock Association; Arthur L. Clark, Secretary.

Jan. 9-12, Alameda, Cal. Alameda County Poultry Association, C. G. Hinds, Secretary.

Jan. 9-13, Chilton, Wis. Chilton Poultry and Pet Stock Association; A. Stransky, Secretary; Frank Heck, Judge.

Jan. 15-19, 1907—Kansas City, Mo., P. H. DeFree, Secretary.

Jan. 15-19—Angola, Ind., Tri-State P. and P. S. Association, W. K. Sheffer, Secretary.

Jan. 16-20, Charlotte, N. C. Charlotte Poultry Association; W. B. Alexander, Secretary.

Jan. 28-Feb. 2, Cleveland, Ohio. Cleveland Fancier's Club Co.; F. L. Gruchl, Secretary; 1922 Woodland Ave.

Jan. 30-Feb. 2—St. Albans, Vt., C. O. Barrett, Secretary.

Feb. 5-9, Hudson, Mich. Southern Michigan Poultry Association; Ed. R. West, Secretary; Frank Heck, Judge.

PHEASANT FOWL HYBRIDS.

Cases have been recorded of cock pheasants breeding with fowls of the farmyard, the produce being sterile and incapable of reproduction among themselves or with either of the species from which they were derived. In order to favor this production, the pheasant must have been bred among domestic fowls. The male pheasant occasionally pairs with a favorite hen, provided he has none of his own species with which to mate. It is usual for only a small proportion of eggs thus feundated to prove fertile. The introduction of a pheasant hen will immediately alienate the attention of the cock pheasant from his newly made mate. Common wild pheasant cocks have been known to mate with six varieties of fowls, viz., Spanish, Game, Buff Pekin, and Indian Game Bantams, Gold and Silver Spangled Hamburgs. All of these hybrids were

described as being exceedingly wild, with heads devoid of combs, wattles, or deaf-ears, and with tails approaching the conformation of the pheasant, but not so lengthy. In size they far exceed the hen producing them, in color they were excessively darker, while their shape conformed more closely to that of the pheasant. The hybrid between the pheasant and the Spanish hen at adult age was black, and of a dull sooty hue, with yellow legs, and weighing nearly seven pounds; round the face, instead of being white, presented the velvety appearance peculiar to the pheasant. In the cross between the black-breasted Red Game hen the scapular and breast feathers were pencilled with as much regularity as in the male pheasant; the ground color was exceedingly dark, and the pencilings were not visible. The face was plain and feathered to the eyelids; the eyes were of a deep hazel. Its weight was about six and a half pounds. As much dissimilarity was observed in the other three crosses as in those described. The markings were as variable as they could be, and the birds as pugnacious as it is possible to imagine, and were always sterile and unsocial. If you wish to experiment allow your bird to mate with a Gold Spangled Hamburg hen. We would first warn you, however, that the cock pheasant is sometimes exceedingly capricious, and has been known to destroy several hens before selecting one to his entire notion. The chickens would make good table birds.

Points on Incubators.

Dr. Richard M. Wood has prepared a bulletin for the Department of Agriculture, Washington, D. C., on "Incubation and Incubators." The summary of his instructions is given below, and the bulletin may be had on application to the Department:

Avoid smoke.

Study your incubator.

Do not overfill the tray.

Turn every egg the third day.

Cool the eggs every morning.

Test all eggs by the seventh day.

Test again by the eleventh day.

Test again by the fifteenth day.

Acquaint yourself with all its parts.

Learn how to trim and clean a lamp.

Get the adjustment right and keep it so.

Set it up carefully and according to instructions.

Have a regular house for incubator work.

Do not tinker too much with the regulator.

Keep the lamps full and the wick and tube clean.

Be sure your hands are clean when handling eggs.

Read the manufacturer's directions for setting up.

See that the eggs are dry and clean before setting them.

Do not disturb the eggs after the evening of the eighteenth day.

Set fertile eggs only. Waste no effort upon those that are doubtful.

Balance all eggs, large end up, a few hours before placing them in the tray.

Heat your machine and make your adjustment before placing eggs in the egg chamber.

Never try to run an incubator in a drafty place, nor near a stove, nor where the sun shines upon it.

If the air space is too large, supply moisture; if too small, put a saucer of dry lime in the room and run without moisture a day or two.

Weed's Wanderings

Shelton, Conn. is our next stopping place, and of course D. A. Nichols and "Billy" Homes the first to receive our attention; and if a few more like them were scattered about the country, it would certainly make a pleasure of business for me. Young Master Nichols is following in his father's footsteps in so far as love of pure-bred poultry is concerned.

Here we visit the yards of C. P. Nettleton and see his famous Light Brahmas and White Cochins; here also we meet Mr. E. Ritche, of Faverolle fame. Then to Charley Welles' and see the daughters and sons of Madison Square Garden winners. Charley certainly has the goods. Then to the Holah Farm, where we see some 1,500 young White Wyandotte chicks. Mr. Holah reports over eighty per cent fertile. I can honestly say I never saw a healthier, stronger lot of chicks than these.

We take the train for Simsbury and meet friend Crangle, and see and talk Russian Wolfhound until we almost forget that it is feathers and not hair that we are interested in.

Willow Brook Farm is our next, and here we see as fine a collection of Orpingtons as we ever had the pleasure of looking at, we find everything in the pink of condition, and the best office system of keeping books, records, etc., that we ever saw. Mr. Davis is a thorough business man and applies his business methods to the running of his large poultry interests.

We next visit the yards of R. C. Tuttle and see Reds that are Reds.

We take the train for New York feeling that we have seen some of the best birds in the several varieties there are in the United States.

On our journey we stop and see the pen of Reds of A. W. Wood, of Pittsfield, Mass.; Arthur certainly has great Reds, and if you want to hear eloquence, just get Arthur started on Reds (he is a lawyer) and you will get the real thing double distilled. From his office we go to that of his brother practitioner, H. L. Davis. Mr. Davis has no desire for feathers. Numbers of eggs and good plump carcasses are all he desires in poultry.

Next we meet W. G. Backus, a veteran breeder of Game fowl, and owner of some grand birds, we then have the pleasure of a good hand-shake with J. M. Trimble, who thinks his W. P. Rocks are simply feathered perfection personified, just get Trimble and Arthur Wood talking chicken and it would make you think of a nice piece of meat, a streak of red and a streak of white. In fact when I saw them talking to a third party they made me think of the good old stars and stripes, for while Arthur was all red, and Trimble all white, the other fellow certainly looked blue.

Geo W Weed

The present is the time to advertise, and then keep it going all of the time.

TORONTO'S GREAT SHOW.

The following news regarding the great show of poultry and pigeons at the Canadian National Exposition to be held at Toronto, August 31st to September 7th, we take from the Canadian Poultry Review:

"The Poultry Committee of Toronto's big exhibition met on March 15th, with Mr. John Chambers in the chair. Other members present were Messrs. W. McNeil, London, representing the Winter Fair, Guelph; W. Barber, A. Atkinson, Ardagh; Geo. H. Gooderham, John G. Kent, and several of the city aldermen. The White Plymouth Rock Club wrote asking for a change in judges and suggesting the name of Mr. J. H. Drevenstedt as judge on White Rocks, but the recommendation appeared to meet with no favor. The birds will go in on Friday, as usual, judging to begin at 8 a. m. Saturday. Classes for Birchen's were added to both Game and Game Bantams as were classes for Partridge Wyandottes; while Penciled Dots was made to read as any other color. Polands, A. O. C., was changed to A. O. V. Several changes were also made in the pigeon, rabbit and cage bird sections.

"The judges recommended to the Board are as follows: Sharp Butterfield, Turkeys, Ducks, Geese, Partridge Cochins and all Ornamental Bantams. J. E. Bennett, all Plymouth Rocks, Sultans, Silkies and A. O. V. T. H. Smelt, Hamburgs, Red Caps, Spanish, Javas, R. I. Reds, Minorcas and Andalusians. L. G. Jarvis, all Leghorns, Dorkings, French and Polands. A. F. Pierce, Game and Game Bantams. J. H. Drevenstedt, all Wyandottes except Partridge. R. Oke, Orpingtons, all Asiatics, except Partridge Cochins. W. Barker, dressed poultry. Ornamental Class, I. B. Johnson.

"Several delegates put up a stiff fight for a new building, but the committee were plainly told that it was an impossibility this year. Promises were made for the future.

"It was moved by Mr. Ardagh, seconded by Mr. McNeil, and carried, that we impress on the Board of Directors the importance of the early erection of a suitable building sufficiently large to coop all birds singly, the present building and coops being both insufficient and unsanitary."

Long Island Association.

The Long Island Association was organized at a meeting of poultry breeders held at Jöhren's Hotel, in Mineola, on Wednesday afternoon, March 15th, with a charter membership of one hundred, including all the prominent breeders of thoroughbred poultry in all four counties on the Island. Preceding the formal meeting there was a gathering of poultrymen in the morning at which a constitution and by-laws was framed and other matters affecting the organization discussed informally.

P. Halstead Scudder was chosen chairman and the following officers were elected: President, P. Halstead Scudder; Vice-Presidents, Edward R. Collins, of Kings County; Isaac Kietoe, of Queens; F. S. Jackson, of Suffolk, and Thomas H. Bacon, of Nassau; Secretary-Treasurer, Robert Seaman, of Jericho. The following Executive Committee was appointed: Rowland Story, Leon Helferich and George L. Young, of Kings County; J. Hart Welch, H. B. Rowedder and Charles M.

Smith, of Queens; R. E. Hannington, William W. Titus and R. H. Jacobs, of Nassau, and L. P. Clark, R. A. Tuttle and C. E. Arnold, of Suffolk.

Under the provisions of the constitution and by-laws the Executive Committee will comprise the twelve gentlemen elected at the meeting, the President, Vice-Presidents and Secretary-Treasurer, a new committee to be elected at every annual meeting. The constitution and by-laws were read by section and adopted as presented with a few amendments.

All those present at the meeting and others who sent letters signifying their desire to become members of the association, were made charter members. It will not be so easy to join the association in the future, as an applicant must be recommended by one member and endorsed by another, after which a ballot will be taken by mail, five black balls being sufficient to reject.

The object of the association is to encourage the breeding of the thorough-bred poultry and to further square dealing among breeders of all classes. A member of the association can be expelled if found guilty of falsely representing his stock. It is the purpose of the association to hold an annual show some time in November of each year, and also to offer prizes at other shows the competition for which will be restricted to members of the association.

Those present at the meeting were enthusiastic over the outlook, and predicted that the association of breeders would have a very beneficial effect upon the industry all over the Island.

PUSS, HEN'S FOSTERCHILD.

(New York World, April 9.)

Mrs. A. J. Osborn, of Alton, Ill., although not a poultry enthusiast, has made a discovery in rural economy that may be disastrous to the makers of incubators and brooders. Mrs. Osborn's common gray house cat is now engaged in bringing up a brood of six chickens, whose own mother deserted them three weeks ago. It is the third brood of chickens tabby has raised.

The cat has not fed the chicks, of course, but guides them to where they can get food and water, and she drinks with them and "mothers" them in every way possible. Instead of clucking, she meows, and the chicks run to her and nestle close to her warm fur. She stands over them and with her legs protects them after the fashion of a real mother hen.

Puss is an enigma to strangers, but Mrs. Osborn says it's all plain enough, since puss herself had a hen for a foster-mother. She was a deserted, forlorn little kitten and was chased and abused by every animal and fowl on the place, until one day an old Plymouth Rock hen took the kitten under her protection, whipped everybody that molested her and brought her up "by hand." When the kitten grew to cathood she and the hen were inseparable, night and day, until the hen died from croup.

The cat does not care for the companionship of felines and is apparently contented only when doing something for chickens.

The mistakes that most beginners make is an overestimation of their abilities. When a tyro determines to engage in the poultry business he should consider it from every standpoint.

The poultry business is what it is made, the successes are the result of hard work and close attention to minor details.

The recruit that joins the ranks, because he thinks he is up against an easy game, will never be numbered as one of the successes.

Consider for a moment the great army of poultry raisers, each with his own method of doing things, and a majority of them succeeding, it is a wonderful business when welded together into a whole fabric.

This county has been long known for its army of poultrymen, there is at present about 2,000 birds shown annually at the fair each fall.

The Perennial Fossils who run this fair have reached the conclusion that the poultry exhibitors are coining money, and have resolved to charge a tariff of 40 per cent of 1st prize on each bird shown, as it is not mandatory on the part of the breeders to show, the possibilities point to smaller entries. I simply use this particular case to illustrate the point, and show that no matter how numerous the fanciers are becoming, some must be constantly on guard that the interest may not suffer.

About all the ill-fowls have ever contracted are said to come from feeding too much corn, in these days of the balanced ration, it should be no trouble to avoid the danger line. Brother, a hog takes to corn like a girl to ice cream, but don't try to make a hog out of the hens and corn will put money in your pocket.

Poultry and cattle relish corn products above any other grain, cracked corn costs the same as whole corn and is a more satisfactory feed.

A help, but not infallible remedy for bowel complaint in brooder raised chicks, is a few drops of a 100 per cent solution of carbolic acid in the drinking water, do this anyway, as the acid is a sure cleanser for the drinking vessels themselves, and a germ killer in the fowl yard is never out of place.

I believe I have told you before how to build a portable fence, in sections, for use about the brooder houses. A twelve foot board, ten inches wide, to this attach wire netting two feet wide, a staple every foot, then nail an upright at each end of the board and attach wire, next fit an A-shaped piece of board at the junction of upright and top side of long board to prevent the uprights from bending in with the strain of the wire, now nail on three lighter uprights in center space and stretch on wire and you have a fence that will never wear out, or sag, and it can be moved to any point as occasion demands.

Chicken rearing requires too many steps for the operator to be without all needful equipment, estimate your daily steps and verify this statement.

A Weekly Journal Devoted to Standardbred Stock.

We regret to learn that Henry L. Fox, the Rhode Island Red enthusiast and champion of the Keystone State, is going out of the poultry business. He has found a tempting proposition which will bring gold to his strong-box in much larger consignments than any possible returns from his hens. Although out of the chicken business as a livelihood he will still maintain a few of his favorites on his place in order to keep in touch with "the boys," which he claims have added ten years to his life and given him employment galore. He expects to do the "buttin-sky" act each year at the Madison Square Garden Show and renew old acquaintances.

* * *

The Rev. S. T. Bartlett, Colborne, Ontario, Canada, has purchased the entire flock of Silver Pencilled Wyandottes formerly owned by Frank H. Hodges, Red Bank, N. J. This in addition to his own stock should give Mr. Bartlett a fine lot of breeders for the coming season and no doubt he will have as great a lot of Silvers in a few years as he now has of Buff Wyandottes. What he did with the latter at Canada's great winter show, held at Guelph, is history. It was a strong class, one of the strongest we handled last season. The Silver Pencilled Wyandotte is still a bit under cover in the Dominion, but with a liberal classification at Canadian shows, it is bound to become popular,

for it is a beauty breed with utility thrown in.

* * *

"How many varieties of fowl can I keep?" is a question often asked. Our answer invariably has been: "The fewer the better." This may seem somewhat unpalatable to some of our friends who make a specialty of nearly everything in the Standard, and not a few varieties not recognized by the American Poultry Association. These good fellows with endless strings of birds they galavant around the circuit forget that the man has not been born that can give enough time and attention to each and every variety to bring it up to the high standard demanded at first-class shows. It is true some succeed in producing a very fair lot of birds, and in some instances, some very good ones, but the fact remains perennial that the breeder who makes a specialty of one breed or variety and aims to perfect it to the highest notch will reap the reward he is entitled to and that is a financial return no polyglot combination of feathered bipeds will ever give.

* * *

In speaking with a well-known fancier not very long ago regarding this subject, he remarked: "When I had one or two varieties and stuck to the practical end of the business with the fancy sales as a side issue, I made money. I got the show fever and exhibited 27 varieties (not Heintz's) and the consequence is I joined the Down and Out Club. I won many prizes and have the ribbons to show for all this. But every ribbon cost a bunch of money. Take the care, labor and time to breed so many varieties, prepare them for the show, pay entry fees, express bills and a hired man to travel with them, and incidentally take an excursion to a show myself, there is nothing left for "your uncle" except glory, and that don't pay feed bills." This is a true story, but the man who told it bred only the very best and patronized only the leading shows.

There is another class of poultrymen who do the fall shows with big strings of birds. In most cases they buy up the different varieties they exhibit and by hard work and often uncomfortable traveling in freight cars, succeed in making money on the circuit. This is a branch of the business not exactly within the realm of the fancier who strives to produce a specialty that will enable him to make money without being subject to the discomforts of the life of the traveling showman. A jack of all trades is master of none is a very good old saw and it applies to the poultry business with the same force as it does in all other undertakings. Sticking to one pursuit, vocation or business is the only way of gaining a reputation in this wide, wide world.

* * *

J. Albert Lewis, The American Fancier photo artist, has been a busy boy in the past few weeks. He has taken some fine pictures of Gedney Farm birds, also of George E. Rowland's pigeons, and a week ago spent a day at Red Bank, where he succeeded in making some fine pictures of Columbia Stock Farm and a few of the birds on the latter. All these will appear in The American Fancier, some this week.

* * *

The next annual meeting of the American Poultry Association will be held at Auburn, New York. How the members voted will be seen on another page of this issue. Although we personally voted for New York and believe to this day that the latter city should have had the meeting, we, nevertheless, congratulate the Auburn fanciers on their good fortune in securing the plum. For a plum it is to any city outside of New York, Boston, or other big cities, where entries are always assured. That Auburn will have a grand show and a large one is an undeniable fact. Not only did the Auburn fanciers work hard to get the meeting, they also had the assistance of others in and out of the State of New York. We understand there will be a big poultry institute held in connection with the meeting.

* * *

It is amusing to read some of the letters we receive from members of the American Poultry Association explaining why they voted for Auburn. Here is what one good fellow from the wild and wooley West writes: "I note that Auburn has the next meeting of the American Poultry Association and I feel that the boys have acted wisely in selecting the smaller town. We can't get good work out of a committee at New York. I have for the past five years favored meeting in some minor place, believing that better results follow and then devote all our time in New York and Boston to secure business." That sounds like a beautiful fairy tale. In the first place, Auburn is not a minor town, its a pretty fine city with a good bunch of hospitable fanciers. In the second place, the best work ever done at a meeting for downright solid business was at Boston, 1898, with the Hon. David A. Nichols in the chair and Major Theodore Sternberg as secretary. And here comes another erroneous statement, viz.: "Devoting all the time to business at New York and Boston." Now what business has a man in an Executive Committee who is present at a show where the A. P. A. convenes to fail to attend its deliberations? If commercialism is to overtop duty and

loyalty to the best interests of the old society, the sooner those saturated with that brand of dope, give up active participation in its affairs, the better.

It brings back what we said a year or so ago, and that was to eliminate all cities where shows are held and arrange to hold an annual meeting in the good old summer time, not in the shade of the old tree, but in some well located, cheery and breezy summer resort, where all the spare time could be devoted to the work before the American Poultry Association. The itinerant habit the latter has developed in its desire to meet in all parts of the United States is not calculated to help the Society as much as the advocates of that questionable proceeding imagine. The A. P. A. has outgrown the infant stage of its existence. The results obtained at Cedar Rapids and Minneapolis are still fresh in the memories of those that observe and study such doings. State meetings of the A. P. A. held each year at some designated city where a show is held would do an immense amount of good. State cups, diplomas or medals could be offered by the association to make it interesting and an object for State members to attend. Then at the annual round-up in the rosy month of June the State clans or delegates can convene and get to work.

* * *

We had a pleasant call from Mr. Geo. B. Inches, of North Grafton, Mass., last week. Mr. Inches is as enthusiastic as ever when Dorkings are mentioned. He has just imported from the famous yards of Mr. Herbert Reeves, three of the latter's choicest birds. The magnificent flock Mr. Inches possesses is a delight to all lovers of the Dorking fowl. There is nothing finer, better or more useful in fowldom than a well-bred Dorking. The craze for new and unfinished products in the feathered line has allowed one of the grandest breeds on earth to almost drop out of sight. But like a good man, the Dorking is bound to come out on top.

* * *

The following item we clip from the Fancier's Monthly, San Jose, California:

"New York City again has a poultry paper. The American Fancier has been transferred to the metropolis and starts out on a new career with J. H. Drevenstedt as editor, and, we are assured, ample backing otherwise to ensure its success. Certainly this great country ought to support in fine style at least one weekly poultry paper, and The American Fancier richly deserves all the success any journal of the East can get."

Editor Chas. R. Hasker, who penned the above lines is well qualified to express the sentiment contained in the latter. Mr. Hasker was the pioneer poultry journalist in the metropolis of America, when as editor of the Poultry Bulletin, he made that journal a pronounced success and giving his only Eastern rival, the Poultry World, a hard run for the money. The old Bulletin changed hands a number of times, J. C. Long succeeding Mr. Hasker, after which John J. Berry, the owner of the paper managed it, the writer of these notes acting as editor. It was then sold to Jas. E. Warner, but eventually gave up the ghost. The Poultry World also disappeared from view after the founder's retirement, H. H. Stoddard. That New York City is the place for publishing a weekly newspaper is pretty well acknowledged. The great gains made by The American Fancier recently indicate that the time is at hand for a paper that come every week of the year to

the homes of thousands of poultrymen to materialize and successfully at that.

* * *

This reminds us that a new monthly paper will be published in New York City called the Poultry Digest. It will make its first appearance April 15th. The prospectus states that the publication will be the one which all poultrymen have so longingly looked forward to for years past. It is further stated "It seems to us that too much cannot be said in its praise" and "It will be the product of the most careful editing that has ever been put into a poultry journal of any class." There are also other fine promises made, which, if fulfilled should produce the ideal poultry journal, and all for twenty-five cents a year.

* * *

Mr. D. L. Hondlow, Manager of the New England Poultry Journal was a visitor at The American Fancier office one day this week and we enjoyed a very pleasant chicken talk with him. Mr. Hondlow is on a trip visiting the large poultry plants in the vicinity of New York City.

* * *

Edwin H. Morris, the duck king of Sparkhill, New Jersey, received per S. S. Exeter City, recently, a consignment of fifty Rouen and Aylesbury ducks and informs us that forty more are on the way from England. Mr. Morris made a big sweep at the New York and Boston Shows last winter with his Rouens and Aylesburies, getting nearly all the blues and the water fowl special. He sold his Aylesburies at the Boston show for one hundred dollars—a record price. The ducks he imported come from the leading expert and Judge in England. Mr. Morris writes: "The swell hotels need not send to France and England much longer for ducks such as their patrons demand. For some years past, Pekins raised in America have failed to meet the requirements for some reasons and the importation in cold storage have steadily increased. An Aylesbury laid an egg weighing nearly four ounces and one of the Rouens got near it with one weighing three and one-half ounces." After this when we meet Col. Morris we will be compelled to duck our head. He has all of us stopped when it comes to ducks, except one man in New Jersey who had a system (not Lawson's) of feeding that will produce Pekin ducks weighing twelve to eighteen pounds each at twelve weeks of age. He told that story at Red Bank the other day with all the assurance capable to be stored up in a human being and never winked an eyelash out of place.

* * *

Mr. Adam Catto, in the Feathered World, England, is responsible for the following which will not only interest Dorking fanciers, but breeders of other varieties:

"A curious thing has happened in my poultry yard. One of my silver Dorking hens stuck in her moult, and did not throw another feather till the beginning of February, when she began putting on cock's feathers.

"Instead of salmon-coloured feathers in breast they are quite black, and silvery neck and saddle hackle, as good as any cock's, in fact. I have good hopes of her developing into a deck-sweeping 1906 cockerel. She was a splendid layer last year. I will be glad if you will let me know if you ever heard of a case the same."

No answer was attached to Mr. Catto's query. We have heard of similar cases in years gone by but never have seen this change of attire from the male to the male garb. Cannot ex-

press an opinion. Perhaps some of our readers can enlighten us on this subject.

* * *

Capt. Walter B. Sherry of Stony Brook, N. Y., and Col. A. G. Oliver, formerly of Valdosta, Ga., have formed a co-partnership and will breed and raise thousands of birds on the Sherry Farm, taking in the leading varieties of poultry and making a specialty of fine waterfowl. When that pair hit the fall circuit there will be something doing every minute. Both are expert showmen who exhibit high class stock in a first class manner.

* * *

Mr. Hugo Freese, Rochester, New York, sent a fine shipment of Rhode Island Red eggs recently to Mr. Rohde Oldenburg, Germany. This is Mr. Freese's first foreign shipment and he naturally feels elated over it. He reports a fine bunch of chicks out.

* * *

Mr. Alan F. Hill, Jr., the able and courteous Secretary of the Albany, N. Y. show for the past season, has removed to Rochester, New York where he will make his home in the future. Mr. Hill made many friends in Albany and was very popular with the fanciers and exhibitors at the shows he did so much to make a success. He will meet a fine lot of fanciers when he gets to the Flower City and should be equally popular there.

* * *

"Big Theo." Hewes has the Columbian Wyandotte fever in a rather pronounced form, having installed a cluster of beauties at his Oak Hill Poultry Yards, Indianapolis. Theo. knows a good thing when he sees it. He is coming East next winter to take in the New York and Boston shows and then will have a chance to gaze on a big array of Columbians. The latter are coming some, to use one of Ham-burgh Bill's expressions.

* * *

We have just received the new circular issued by Willard Brook Farm, Berlin, Conn. It is strictly out of the ordinary being printed on fine half-tone book paper and in newspaper form. It is beautifully illustrated with pictures of the plant that have made Willow Brook Orpingtons famous all over the United States and Canada. The "Only William" Davis, proprietor, manager and sage, has our congratulations on this, his latest and most successful effort to make poultry catalog literature readable and instructive.

* * *

The sales of American Standard of Perfection aggregated 14,700 copies up to April 2d. This practically exhausts the present edition and the Secretary requests that no more orders be sent in for this edition. The second edition, containing additions, changes and illustrations ordered at the last Cincinnati meeting, will not be ready until about May 1, 1906. We will book orders for new edition to be filled in rotation as soon as a supply of the books arrive from the publishers.

John H. Revere

The question is often mooted as to the difference between a "new laid" and a "fresh" egg. An authority says that "an egg is fresh as long as it will hatch under a hen." That ought to settle the question.

Business & Otherwise

The hit and miss chat that is hereinafter to ensue is indited with malice aforethought, if you please, for the scribbler has several matters whereof to write, all of which may be taken with or without sauce, just as the reader feels disposed.

* * *

Beginning under the asterisks, it is well to speak of the biped who rears and tears because his little say does not appear in these columns. This is beyond the day of miracles, and forty-five feet of reading matter cannot be jammed in twenty-two feet of space. Have patience, and your airing will come around.

* * *

Here is a little poemlet that it is well to put under your hat:

BOIL IT DOWN.

Whatever you have to say, my friend,
Whether witty, or grave, or gay,
Condense it as much as ever you can;
Say it in the readiest way;
And whether you write of household affairs
Or particular things in town,
Just take a word of friendly advice;
Boil it down!

For if you go sputtering over a page,
When a couple of lines would do,
Your butter is spread so much, you see,
That the bread looks plainly through.
So when you have a story to tell,
And would like a little renown,
To make quite sure of your wish, my friend,
Boil it down!

When writing an article for the press,
Whether prose or verse, just try
To utter your thoughts in the fewest words,
And let them be crisp and dry;
And when you have finished, and you suppose
It is done exactly brown,
Just look it over once more, and then,
Boil it down!

* * *

It is a wise hen that knoweth its own chick in these strenuous days of incubation.

* * *

Yes, The American Fancier is printed at Ossining, N. Y. Furthermore, it is printed at the printery of the Ossining Printing and Publishing Company, a corporation that possesses the most complete outfit between New York City and Albany. The concern prints a daily paper, besides ten other publications, and maintains a large job printing department besides.

* * *

We speak of this because some of our patrons seem to think that Ossining is simply the home of that good gray jug, the Pensionnat des Chevaliers d'Industrie, or Sing Sing Prison, if that is plainer.

* * *

Ossining contains the palatial homes of Mrs. Elliott F. Shepard, Walter W. Law, V. Everit Macy, Brayton Ives, James Speyer, Frederick Potter, General Edwin A. McAlpin, not to speak of places of lesser magnitude. That ought to hold somebody down.

* * *

Sylvanus E. Still, who has his yards at Sparta, a suburb of Ossining, has presented the writer with old files of The American Fancier. "Van," as he is universally known, is a Pit Game breeder, and has been at it since 1876. Some stories will appear in these columns later on about chicken doings in old Sparta.

A large flock of wild geese went honking northward on Saturday night, winging their way to "Dick" Hutching's game preserves in Canada. The flock was flying low as it swept along the Hudson, and the pert White Leghorn cockerel in the coop in our backyard crowded lustily as the winged procession clattered along in the moonlight. His cockship probably knew that the flight of wild geese was a sure harbinger of vernal spring.

* * *

Just in passing, it is well to say a word about that pen of White Leghorns in our back yard poultry farm. There is a cockerel and five pullets, and their juvenile owner is just now gathering in enough eggs for Easter offerings, with a setting or two over.

* * *

There is a difference of one letter only between hen roost and hen roast, and nobody knows that better than our colored brethren.

* * *

The American Fancier now reaches thousands of post-offices in the United States and Canada. There is hardly a city or town where The American Fancier is not read by one or more subscribers every week. In nearly every community there are some fanciers who are not yet on our subscription list. We are certain that many of our regular readers can get up a club of five subscriptions at one dollar each. If they will do this, The American Fancier will present them with a copy of the American Standard of Perfection, latest edition.

* * *

The American Fancier editorial office is now installed in a commodious suite of rooms in the Havemeyer Building, in New York City, so that members of the fancier fraternity, and relatives and friends generally will have a chance to swing around when they visit us. Our temporary quarters quickly proved too small for the demands of The American Fancier, so the jump was made before May 1, thanks to the powers that be in the Havemeyer Building. Drop in and see us when in town.

Robert T. Dennis

NOTICE TO CORRESPONDENTS AND ADVERTISERS.

Owing to the increasing circulation of The American Fancier, together with a corresponding demand upon our advertising columns, correspondents and advertisers are notified that all communications should reach the New York office of The American Fancier, Havemeyer Building, No. 26 Cortlandt Street, before 4:30 o'clock, P. M., on Monday of each week, in order to secure insertion in the current issue of the paper.

The greater variety of food you feed your hens the nearer they will come to the two hundred egg mark. It is not necessary to take them to a restaurant, but give them milk, meat scraps, fresh cut bone and green food along with corn and grain and biddy will do the rest.

The American Fancier has been this country's foremost poultry journal for the past thirteen years, but heretofore has devoted little space to the pigeon interest, however, the management has now determined to introduce this department on the same practical lines.

It is quite possible to make it a success, if we have the earnest support of all pigeon fanciers, for there is a demand and room for this department.

It will be the object of this column to give full show reports, with impartial criticism. Justifiable criticism by the press should not only be appreciated, but vindicated, as it tends to promote progress.

It seems peculiar, to say the least, that pigeon fanciers are having the same trouble, this year, as last, in getting the official rings.

When numbered from 1 to 9999, it should be possible to run off several sets, especially when we are forced to take them in numerical order. The American Pigeon Club held their annual meeting at the New York Show the first week in January, when the matter of who should make the official conference bands was settled.

Perhaps if the contract was made before the current year, it would give less excuse for delay.

Mr. George E. Rowland's Magpies.

There is no fancier to-day better known in Magpie and Fantail circles than Mr. George E. Rowland, of Jersey City, N. J.

Four years ago (1902) at Madison Square Garden, New York, this gentleman made his debut with a team, including the ten best from the lofts of George W. Spohn of Philadelphia, Pa. From that day's adventure the stud has grown until to-day his magnificent lofts shelter one of the best if not the best team of Magpies (all colors) in America.

Mr. Rowland has shown the same characteristic energy in the pigeon fancy which manifested itself when he entered the Belgian Hare fancy, by purchasing only the best.

When that fancy was at its zenith he took the Bergen Rabittery (owned by Mr. Rowland) mare the phonemal record by winning at Madison Square Garden, 1901, first, second and third in a class of twenty-two.

The cavey fanciers were startled when they heard this gentleman had turned his attentions in that direction, and well they might be, for in 1902, he exhibited such specimens as "Snow-drop" (White Peruvian) first New York, "Prince Dash" and "Realization" (Abyssinian) First and Second New York "Royal" (Black English) First New York Champion "Elegance" (Broken English) First New York and at that time owned the best mixed

team of Cavies in the world.—Fur and Feather, Jan. 23, 1902. At New York, 1904, in the hottest competition ever held in this country, 126 entries, Mr. Rowland won 21 out of possible 26 firsts, a record which will stand for many a year.

The first variety of the Pigeon fancy to gain favor with Mr. Rowland was

Black Hen, (imported Warner) First Ilfracombe, First Bedford, First Lancaster Club show and Third Crystal Palace, England, Third, New York. This hen has magnificent color, grand station and reach very fine head, in fact one of the best blacks we believe ever exhibited in this country, very clean lick.

Imported by Mr. George E. Rowland From F. Warner, Esq.

No. 1—Yellow Cock, First Middlesex, England; First New York, 1906. No. 2—Black Cock, First Sp. and Certificate, best in show, all varieties; Bideford, First and Sp.; Asbroadth First Tampton England; First New York. No. 3—Black Cock, Second New York. No. 4—Red Cock. 2 Palace, First New York.

Photograph by J. Albert Lewis.

The Home of Mr. George E. Rowland's Magpies.

Photograph by J. Albert Lewis.

the Magpie. His first exhibit was shown at Madison Square Garden January 14, 1902, at the annual meet of the Eastern Magpie Club, where he captured the special for the best yellow bred 1901, and silver challenge cup for the best 1901 bred, with his winner in the young black class. From that time on he has exhibited at all the leading shows, and has always held his usual position.

In his breeding lofts to-day are such Magpies as Black Cock (imported Warner) First, special, and certificate best in the show (all varieties) Bedford, First and Special Asbroadth, First Tampton, England, First New York, 1906, (no two in group) a gem for color, very long slim neck, beautiful eye and cere, fine carriage.

Black Cock 1905 bred, imported Warner, 2 New York grand color, eye and cere very slim built especially for a cock, one of the best young cocks in Mr. Rowland's lofts. (See No. 4 group).

Black Hen 1905 First New York, one of the best blacks we have seen, great length of neck and the same type the Warner birds are noted.

Red Cock 1904 First Ilfracombe, First Yarmouth, First Bedford, First Tampton, First York and Second Crystal Palace, 1905, England, First New York. This cock needs no comment, its record tells for itself. (See No. 4 group).

Red Hen 1904 Second Edinburgh Second Manchester, Third Lancaster Club, First and special Barstaple, Fourth

Crystal Palace, England, First New York, a hen full of quality, grand color, perfect markings.

Red Cock, 1905, First and Special Yarmouth Club show, England, First New York, a great youngster, very fine for a cock, together with the second Palace, First New York. Mr. Rowland holds a very strong team for the old classes this coming season.

Blue Cock, 1905, imported, Fourth New York, fair color, fine station, a trifle coarse in neck.

Blue Cock, 1904, imported, second Dairy, second club (Oxford), third Palace, 1905, never shown in this country. The best bodied Blue Cock we have yet seen, very slim, long neck, grand color and station will be a hard one to pass.

Blue Hen, 1904, imported, second Palace, second Lancaster, England, another Blue with that beautiful carriage, very slim, fine head and beak.

Silver Hen, 1904, imported, second Dairy, first Manchester, second Crystal Palace, England, second New York, a very clever hen, good color and markings, very slim long neck, perfect station.

Silver Hen, 1905, Third Palace, England, Third, New York, another hen same quality.

In yellows, this loft is, indeed, just about invincible.

Yellow Cock, 1905, first Middlesex, England, First New York (see No. 1 group), a clinker, one of the best yellows out, very slim, long neck, beautiful eye and cere, grand color.

Yellow Hen, 1903, imported, second Crystal Palace, First Tampton, second Abroadth, first Lancaster (Club show), England, First New York, very slim built bird, ne stature, the same fine color for which these birds are noted.

Yellow Hen, imported, 1905, second New York, another about the same type.

This enumeration by no means includes Mr. Rowland's entire show stud, but refers only to a few imported this past season, together with the sires and dams of some of the best in England.

At the time of this writing there are quite a number of youngsters wearing 1906 bands that claim some of these aristocrats for their parents, and by their appearance will be equal to the task of maintaining the reputation obtained for this loft by their ancestors.

Members American Magpie Club.

Don't forget the dust bath, if use ashes, have them screened.

Mr. Bell Answered.
Shushan, N. Y.,
March 20, 1906.

Editor American Fancier:

In your issue of March 10 I notice that Mr. Bell was displeased with what I had to say about the Buff Wyandottes at New York. Mr. Bell, other breeders, judges and myself, looked over the Buff Wyandottes at New York, and he with others agreed that the cock and hen of Pensyl's referred to were the best in the class, and they were. The 1st, 2d and 3d cockerels were very close, and there was very little to choose between them; 1st and 2d had a little the best wings and tails, while 3d was better surface color, better type and had better head than either 1st or 2d. There was a divided opinion among breeders and judges as to whether 1st, 2d, or 3d should win. Any of them could have changed places and no harm been done.

You asked me to write up the class and I did so just as I found it. On account of Mr. Bell's tender age as a breeder and exhibitor, I am very sorry I hurt his feelings and hope he will forgive me this time, and I will try and not let it occur again.

When Mr. Bell says I wanted to see Mr. Pensyl's birds win simply because I sold them, he simply tells a falsehood. That is all.

ANDREW RIDDELL.

Mr. Riddell Scored.
Center Moriches, N. Y.,
March 18, 1906.

Editor American Fancier:

Having been a subscriber to The American Fancier for eight years will you allow me a little space to reply to the article entitled Buff Plymouths at N. Y., by Andrew Riddell. Mr. Riddell seems to have constituted himself as a supreme judge of the Buff Rock and Wyandotte class. Mr. Riddell could not find any good birds except those that were unplaced, and seems to be particularly disappointed because one particular hen and one pullet were unplaced. Could not Mr. Riddell inform the poor ignorant exhibitors in the Buff Rock class who do not know a Single Comb Wyandotte from a Ply-Rock when placed side by side in a cage, in whose yards those two particular females were raised, perhaps he could also tell from what noted strain of Buff Rocks they were bred. If Mr. Riddell want the position of judge at N. Y. we would suggest that he apply for it in a manly way and not take the disquieting way of throwing rocks at the judge over the exhibitor's shoulders.

Yours truly,
ROBERT A. TUTTLE.

Something About Poultry Raising.

"Don't we think poultry advertising the poorest kind of advertising?" We certainly do not. All things considered it is very good advertising. True, only a small proportion of the ads. of poultry are prepared by advertising experts, and equally true many ads. of poultry are very poor ads. But consider the circumstances. Many of these poultrymen spend less than fifty dollars a year in advertising. It is clearly unfair to compare their advertising with that of the general advertising in the magazines. Compared with others advertising on the same scale, we think poultrymen make a very favorable showing.

BROWN'S BUDGET

The Farmers' Agricultural Club of Maryland are getting considerably interested in poultry raising. Some of them have some very practical talks on poultry raising. The Junior Gunpowder Agricultural Club were guests at Kinlock Farm (Mr. W. H. Wight) in Baltimore County, March 31st. They inspected Mr. Wight's poultry plant and learned some very practical lessons and got many ideas of value on raising and feeding poultry. Mr. Wight had 800 young White Wyandottes of various ages which were in excellent condition. Beside the members of the club there was over a score of specially invited guests, which included many ladies. A splendid luncheon was served and then the entire party inspected the poultry plant although a snow storm was prevailing.

Wrap the eggs you are saving for hatching, in clean paper, not newspapers, and keep them in boxes—small boxes are best. The boxes should be with covers and every day should be turned over on another side. Keep in a dry place, and if you keep separate yards or more than one breed label the box so you will have no trouble to find just the ones you want when ready to set them. If the eggs are soiled in any way, wipe them off with a soft rag dampened, then wipe thoroughly dry before putting away.

Don't trust to your memory when you start the incubator or set a number of hens. Have a little note book and jot down the facts. System saves trouble and is often better than worry, because you "can't remember." If you set hens mark each egg with ink what breed it is, and if you know the hen or pullet so mark it. By doing this you can often determine some very interesting facts. You may discover certain ones are not as good a percentage of fertility as you expected and if it is the incubator mark hens' eggs H, and pullets' P, then you can study the difference in results.

The wise poultryman don't do any rut stunts. Ruts sooner or later produce some serious jolts. In the poultry business one must bear in mind the hens don't take any holidays, but "shell out" Sundays as other days. When it's too wet to work the crops, the farmer can go fishing, (and if a good trout stream was near, I fear I would conclude it was too wet for anything but fishing) but the poultryman when it's too wet has extra duties to perform.

Any poultryman or farmer can raise too many chicks. It is often done. Too many means inferior specimens all around. Raise only as many as will do well on the space they occupy without crowding. Remember conditions or environments have their influence

as much as food. Lack of variety in food will never produce the high class specimens. It is always quality that pays. Quantity lessens value when conditions to secure it in any degree affects quality.

There will always be hens set because there are so many people who only keep a dozen or so of hens "just to get eggs for the table, you know, and raise a few chicks." There are many more who are favorably situated to do the same thing, but lack of ambition keeps them back. This lack of ambition is sometimes called laziness but one mustn't always say so. This same "lack" lets a good many who venture in the poultry arena to be counted out while they are down. Hustle, brothers, hustle. It is the hustler to-day that succeeds in occupations of any kind.

There is a difference in opinion about fat hens. Some declare fat hens are good layers and others are equally sure that they are not. If we see cows that are very good milk producers they are generally those that "manufacture" food into milk instead of fat and are generally what is considered quite lean. An active, sprightly hen is the one we expect eggs from, and the one fat hen is apt to become very lazy—a condition not conducive of egg-laying. Hens can be too lean or thin for egg-laying as well as too fat. When the "happy medium" between the two conditions can be determined, then will we have solved an important enigma.

Some of the poultry "fish" stories of to-day are quite peculiar, but don't touch the fairy-style tales of the long ago. Listen to this from a poultry book published in 1844: "Java Bantams: These are perfectly white, but present no peculiar characteristics of form or structure; their habits, however, are in some respects so singular as to demand especial notice. The cocks are so fond of the hens eggs, that they constantly break and suck them; and they have been known to attack the hen, to tear open the ovary, and eat the egg shells. To subdue this propensity her majesty's keeper gave the cocks first a hard-boiled egg, and then a marble one to fight with, taking care at the same time to keep them from any access to a real egg. No sooner was this done, than an attack on the false egg was commenced, which lasted for a week, till at last wearied with their fruitless labor, they gradually gave up all notice of them, and with that abandonment, as was anticipated, they ceased from their accustomed destruction of the eggs, and have never been known to attack them since." The poultry book says this story was found in a late London paper. Evidently the reporters in those days used a beverage that produced results much like that used to-day by reporters of some of our daily press.

Parkville, Md. GEO. O. BROWN.

If your Fowls are Sick
and mope about, sneezing; eyes swollen; rattling in throats, they have Roup, the most dangerous disease known to poultrymen.

CONKEY'S ROUP CURE

is the one article that will not only Cure but prevent this disease. It is easily given; kills the germs; tones up the fow's health. Just as good for Turkeys and for Canker in Pigeons. **GUARANTEED.** Conkey's Roup Cure is sold under a positive guarantee. If it fails to cure Roup, Colds or Canker in any form, your money will be refunded cheerfully. If your Poultry Supply Dealer or Druggist cannot supply you, send order direct to us. Don't accept a substitute. Insist on Conkey's.

Price, 50 cents, postpaid, makes 25 gallons. \$1.00 " 75 " " Valuable Book—FREE. Our 25c. book—48 pages of most valuable information on Poultry Diseases mailed to anyone sending 4c. to cover postage. Send for it TO-DAY.

S. C. White Leghorns

Line business bred strain, originated from best utility and prize stock. Fully matured, large vigorous birds, mated for profitable results. Excellent layers. Eggs for hatching, \$3.00 per setting.

OTTO BROS.

646-649 Box 779 Rochester, N. Y.

The poultry business in the past has been injured more by the glaring failures than any other feature. It is true that it is still in its infancy, and it is equally true that it will remain there until a sufficient number of conservative men will demonstrate to the public that, if properly managed, a poultry plant can be made to pay a handsome profit.

The poultry and dairy interests made \$1,125,000 change hands in the last year.

I can furnish you anything for the show. Ornamental or general utility purposes in Poultry, Pigeons, Rabbits, Cavies or Guinea Pigs, Pheasants, Guinea Fowl, Pea Fowl, Ornamental and Wild Water Fowl, Swans, Etc. Stock for sale at all times; write me your wants.

Eggs for Hatching

ONE DOLLAR FOR FIFTEEN; \$3.00 for 50; \$5.00 for 100; from good stock, each bred on a separate farm with full and unlimited range—no other fowl on each farm excepting the one breed. This means eggs are the kind you order—a big percentage of fertility and strong, healthy chicks. As to quality, none better at any price. Eggs from the following varieties: White Wyandottes; Barred, Buff and White Plymouth Rocks; White Langshans; Anconas; Rose Comb Brown, Rose Comb White and Single Comb White Leghorns; White and Black Minorcas and Brahma Bantams.

Duck eggs, \$2.00 for 11, from Colored Muscovys, Pekin and Indian Runners.

All eggs guaranteed fresh laid, true to variety ordered, a fair percentage fertile and packed in best possible manner, so they are sure to arrive in good condition.

WE WIN!

At the late Madison Square Garden Show, New York, in
the S. C. Buff, Black and White Orpington classes as
follows: Seven firsts, 9 seconds, 7 thirds, 4 fourths and 4
fifths, and these in the strongest classes of Orpingtons
ever put together, there being 370 birds competing. We
also won the most prizes of any breeder in these same
classes. We have the stock and established winning
breeding lines, but buying high-grade stock and eggs
cannot safely be done upon the strength of the mere
argument a breeder has room to alive in his adver-
tisements. Now we want you to send for our catalogue,
testimonial book and a very elaborate mating list, de-
scribing over forty different breeding yards and prices of
eggs for same. Do not be fooled or misled by mis-adver-
tising, but come to the fountain head to get your start.

NO. 647

Farmers As Poultry Raisers

BY W. THEODORE WITTMAN

The following address was delivered recently at a farmer's institute held at Allentown, Pa., by W. Theo. Wittman, one of the leading breeders of Brown Leghorns in the United States:

Last fall on the streets of this city one of our leading merchants, with a large retail trade in butter and eggs, engaged me in conversation. He wanted to know why it was that, situated as Allentown is, in the very midst of a growing farming country, his firm should annually experience unusual difficulty in getting enough fresh eggs to supply their trade. He thought the prices must be satisfactory enough, in fact, large enough to tempt anyone with sufficient room to make an effort to have lots of eggs to sell.

He wanted to know if he was right in this and especially why the farmers did not have more eggs.

In a fifteen minute talk I tried to answer his questions and, believing that many farmers, villagers and city people would be likewise interested, I shall repeat the substance here. Farmers don't have any more fresh eggs because, first, they do not have the stock that will lay many eggs. I believe that I am staying strictly within the bounds of fact when I say that the average annual number of eggs laid per hen on the farms of Lehigh County does not exceed 40 or 50 eggs, when the average number of eggs might be, should be, 140 to 150 per year. In other words each hen on the farms of Lehigh County to-day is laying 100 eggs per year less than she might lay or should lay. Counting each egg worth one and one-half cents this would mean \$1.50 per hen. Now how many hundred thousand hens are there in Lehigh County? Ascertain this fact and you could compute the enormous loss to the farmers of our county in dollars annually.

I say because they have the wrong stock. Poor laying stock. This poor-ness of stock is not due entirely as many might guess or claim, because it is dunghill stock and not pure bred stock.

There are good layers among the dunghill stock, and, given many years of careful breeding, this stock might eventually be made a good laying stock.

It is to-day primarily a poor laying and unprofitable stock generally because it receives no breeding attention whatever.

Because of the way it is kept and culled.

Because of the way it is fed and reared.

Let me explain: Corn, the principal, I might say, practically, the exclusive grain feed of our poultry is when so

BUFF WYANDOTTE COCKEREL "GILTEDGE"

First at Frankfort, N. Y., 1906

Owned and exhibited by S. A. Howland, Granville, N. Y.

fed a poor food for laying, a poor feed for rearing.

Corn means as a food, principally heat and fat. An exclusive corn-reared and a corn-fed hen is a half starved hen from the cradle to the grave. How then can she be a good laying hen?

Right here is one point which if heeded will be alone worth all the time spent listening to this talk.

If you must feed corn, and corn, outside of the fact that of its plentifulness and cheapness and convenience, fed in connection with other grains, especially in winter, is a valuable hen feed, I repeat, if you do feed corn, never feed flint corn, either yellow or white. Flint corn in comparison with small dent corn, fails because, first, it is too large in grains, is too hard. The large,

very hard flint corn requires twice the time for the preparatory swelling in the crop, and next the digestion in gizzard and bowels. For the same reason it is a severe and unnecessary tax on these organs and on the fowl itself. Dent corn can be usually be had in a small grain and is always comparatively soft, no harder than wheat, for instance.

But there is another strong reason why dent corn is preferable to flint corn. One you can best realize if when you come home you will take a pen-knife and divide a grain of both.

The flint corn will be almost the entire kernel, carbonaceous or heat and fat material. The dent corn will be different. Much less of this and more nitrogenous. Our farm poultry should

have more wheat, buckwheat, barley and oats fed them. The better way to feed these grains is to feed them mixed and to have all the corn cracked.

The only exception should be in cold weather when the corn may be fed late in the day as a whole grain. Being especially valuable when fed first partly parched in the oven.

But if the grain feed is wrong, what shall I say of the drinking water? Too often this is filthy water. In the summer time tepid and nasty, in winter icy. Often times the drinking water is the leachings of the pig pen and manure pile. This same manure pile and pig pen are the greatest stumbling blocks to more eggs on most farms.

The manure pile and pig pen rank perhaps first as the agents for the making of dunghills and their low value. A fowl that hunts the manure pile and pig pen is the counterpart of the man that haunts the saloon. Neither can nor does amount to much. The hen that haunts the manure pile is after the ferments found therein. These ferments foul her breath, taint her flesh and taint her eggs. Make her and her eggs unfit for human consumption. Well, you don't believe this! Catch a fowl roaming these unsanitary places. Open her mouth and smell her breath. Look at her plumage lacking in lustre! As a poultryman especially interested in fancy or thoroughbred poultry I know the high value in dollars and cents of poultry with fine plumage. You simply cannot find nice plumage on poultry with dunghill privileges.

Further proof—a manure tainted fowl gives out a characteristic odor when boiling in the pot.

An incubator full of eggs, laid by such poultry, will by the eighth or tenth day give you a strong whiff of the barnyard if you will have your nose at the door when opening it.

I say such poultry, letting alone their unprofitableness to their owner and grower, is not fit to eat. And worse yet are the tubercular poultry sold in your markets and eggs laid by such fowls. A tubercular fowl cannot always be told by simply looking at it, but as I go around in this city and look into the stalls of poultry awaiting sale as market poultry I have seen many a fowl plainly affected by tuberculosis.

If tubercular cattle are not fit for human consumption, then tubercular poultry is not either. And if an egg laid by a tubercular hen will hatch a chick with tuberculosis, then certainly there are tubercular eggs.

Tuberculosis among Lehigh County poultry mostly exists because of the unsanitary methods by which they are

housed and culled. This brings us to the second reason for the low egg average of the farmers' hen, the method by which they are housed and culled.

It seems utterly impossible to persuade most poultry keepers especially farmers, and I have had lots of experience with them, to kill or burn or bury weakly chicks or sickly fowls. No, not by any means are such ever killed and thus disposed of. A weakly chick will never be a profitable chick. Never be a good laying hen. When grown it will usually be the first to sicken and die, and worse yet be a source of contagion to healthy poultry. Sick fowls usually die sooner or later anyhow and if they do recover make the worst possible stock to breed from.

The housing of poultry is such a broad subject that it can only be lightly treated of here. The two most important things are to have a tight house on north, east and west sides and so arranged on the south that it is practically wide open here the year round, and not missing a single ray of sunshine possible. This for adult fowls.

Chicks should have weather and rain-proof houses. These two things will pay several hundred per cent. over the cost and trouble. Will, if consistently followed out practically avoid the gape trouble—that scourge of young chickens, well rooted in our county.

Referring back to our third and original reason. No poultry stock is the best laying stock unless it is bred that way, and the only way to breed a good laying strain is to breed only from males direct out of a prepotent and proved good laying line of hens. To make this plainer—suppose your home flock has an unusually heavy laying hen. Set her eggs separately and select from among her chicks, cockerel that impresses you as partaking most of her characteristics. Breed such a cockerel back to his dam, your fine layer. Again set the eggs separately and mark the chicks. You now have a lot of males three-fourth the blood of your good layer and such males bred back into your flock are bound to produce a lot of females that will greatly increase the average egg yield.

And finally, what the farmers of this county want to do, is to put into their pockets the hundreds of thousands of dollars (the egg product of this country annually sells for over \$180,000,000) which they are now missing, is to exchange their dunghill stock for purebreds. I don't mean cross-bred or the cheap pure breeds currently passing as good enough for farmers.

I would especially recommend White, Brown and Buff Leghorns, White and Barred Plymouth Rocks, White and Silver Wyandottes.

If I could not do any better I would invest \$5 in the fall for a cockerel direct from some of the big market egg farms. Farms where six to ten thousand White Leghorns are kept for eggs alone and where the matter of many eggs is down to a fine science.

You can find fair White Leghorn females nearby or you can buy this March or April one or two hundred such eggs for hatching and raise your own females.

But you want to buy a male from a known heavy egg strain and you want to use no other males.

Worth Remembering

That in our breeding operations there are times when fresh blood is desirable and required to assist in keeping up the stamina, or for other reasons, and our advice is to get this desired outside blood, not by buying an entire stranger, but by breeding one or more of your reliable breeding dams to some one of the best males before the breeding public, and retain the desirable offspring of this union, if there be any, for your own use. Should the get of this union have objectionable features to a marked degree discard them, and either send another female who may have a different line of blood in her veins from the one sent first to this male, or choose a male of different breeding and try again, until you strike the blood lines that blend successfully with that you own and produces good, all round specimens. Then you can retain the offspring and use it in your home breeding, and not destroy the good qualities and desirable traits of your stock.

That there are only two sorts or classes of females worth the expense time and risk of sending across country to be bred to outside males, and one of these we do not consider of great value. First, the line bred female that comes from a long line of dams that produced good young. In this case you are reasonably sure of getting offsprings very much like the line dam is from, and unless that is good, no breeder worthy the name would send her away to be bred. In this case you retain your type and good qualities, and gain by getting fresh blood. The other class of dam referred to, is the one who invariably breeds young like the sire. There is an advantage in this sort in one way only, judged from the standpoint of an expert breeder: That in case you are wanting something to show this dam can be sent to the best, most typical male, and there is a likelihood of her breeding something above the average for show. But get from a dam in most cannot be depended on as breeders. That, the dam whose offspring so strongly resembles the sire is, in nearly every case, a high strung, nervous, sensitive animal, and that it is more her mind than her breeding that effects the offspring, mental impression, more than hereditary effects, and consequently the young from such a union who return are used for breeding, may revert toward either parent, or to neither, and is unreliable.

That, the same underlying principles govern all lines of live stock breeding, and the laws and rules that apply to one apply to all.

That, the man who is gifter to see beauty of form, harmony of parts, in any line of animals, and has any love for another branch of live stock, could see the same qualities in them, as soon as he had given it proper thought and study.

That, the man who by careful breeding has been successful in improving the breed of his choice, could if an admirer, and thoroughly inter-

ested in another breed of live stock, make a success of the breeding of this breed also, just as soon as he had learned the different traits and characteristics of the different families, and posted himself on the different blood lines, and the desirable and undesirable traits they transmit.

That, not every man who owns and raises live stock is a successful breeder, any more than is all men who judge live stock a real judge. The former may be a good care taker and successful in raising animals or birds, but when it comes to breeding prime specimens in type and desirable breed qualities, apparently have no ability or insight in the secrets. The latter may have ability enough to discern between the cull, the fair specimen, and the good one, of the breed he is judging, but put before him 6 to 10 fair ones, or to make the test more severe, 6 to 10 real good ones, and the men are few, comparatively, that are gifted with the ability to lay all personal likes and dislikes aside, and put the blue ribbon on the best all-round specimen, and be able to show exhibitors why, as an all-round specimen of the breed, this one particular good one is better than the other good ones, as an ideal specimen. The judge who, when asked, simply tells you, "I liked this one the best," has not done his duty by you, and has about as good as admitted that he was not just exactly sure the specimen was the best, as a representative of the breed, according to the breed standard, but that there was something about him or her, that he, individually liked best.

That no breeder, or judge, is high-class, reliable, or of sterling worth to the business, who "rides hobbies" in breeding or judging, other than those that conform to the all-round standard specimen. Good heads, are very desirable, but a good head, or an extra good head, attached to an ordinary, or poor body that is carried about with poor legs, never yet, in the eyes of intelligent breeders or judges, made a good specimen. Good standard color, in any breed or variety is very desirable, but color without form is of little avail. First, and above all else, in all sorts of live stock, give us form; breed shape, harmony of parts, hold this, and then work on color.

That none of these desirable qualities can be obtained with careful selection, with an object in view, and by line breeding, and after by close inbreeding to stamp these qualities so they will stay, while you are striving to obtain some other desirable trait.

That the breeder who succeeds in producing a goodly per cent of prime specimens is always busy while awake. If there are times when his hands are idle, there is plenty to busy his brain. (No need to add, if he has any brain, for no man without this essential ever bred anything but trouble and foals.)

That, there is no occasion to worry about finding a market for all the good ones, any or all of us can pro-

duce, as they are the very sort that the demand exceeds the supply. It is the ordinary, and the poor ones that go begging for buyers, in any and all branches of the live stock trade.

That a forty word adv, one insertion, in The American Fancier, will sell all the 100 point hens, of all the Standard varieties, that you or I will raise in 1906.

D. E. B. O'NAIR.

Ventilation in Poultry Houses. Editor American Fancier:

Ever since I started in fancy poultry I have always tried to find some better plan to ventilate my house.

But until the last season I have been unable to keep my walls perfectly dry in winter. Last fall I built six new houses for laying and breeding purposes.

Now I had read of cloth being used for windows in place of glass so I decided to try two houses that way.

I build my houses on the Colony plan and from years' experience I find while it requires more care for the same number of birds the results more than pay for the extra care.

I build them 16 feet long by 8 feet wide. Rear 4 feet front 6 feet, with a 7 foot post 3 feet front inside measurements. Dropping board 30 inches wide, 20 inches from floor in rear of house. House being low down but plenty high enough for ordinary man to stand erect all over it but back to the windows.

I bought two weights of duck, 8 and 12 ounces on the inside and I used the 8 ounce and on the outside I used the 12 ounce, and being in a hurry I simply nailed it over the spaces left for the windows. It should have been nailed on frames and hinged to a window frame to be raised when the weather would permit.

Now in each house I had two cloth windows each 30 inches by 36 inches.

In each house I put plenty of oat-straw just as it was thrashed, 6 to 8 inches deep, with 30 birds in each house which were kept there all winter, and, say, gentlemen, that straw never got damp even. Nor did I ever see a particle of dampness on the walls all winter, and for laying, I never had hens lay so in my life. While the houses built just the same, with same conditions except glass windows were damp all the time.

Now another season my houses will all have canvas windows with the exception of a very small sash in each house to admit more light on stormy days.

I know that my birds in the cloth window houses were much healthier and for a business proposition they paid me one hundred per cent. better than the glass window houses. I would be glad to hear of the experience of others on the subject.

CHARLES H. BRUNDAGE,
Danbury, Conn.

It is just as well to clean your hen house once in a while, if you don't do it regularly. There are occasions when a hen house becomes unsanitary, and the dirty hennery is usually the one that is seized that way.

The most important feature in raising brooder chicks is to have a handy spot to be used as a cemetery. Then put on a brave spirit, and don't be down-hearted when your chicks drop off one, two or a half a dozen day.

AWARDS AT AUBURN SHOW.

Barred Rocks—Cock 1 Hovey & Fairbanks, 2, 4 Arthur G. Bouck, 2 Jas. Foord, 3 Geo. A. Owlett, 5 O. A. Mochler; hen 1, 2, 4, 5 Bouck, 3 W. J. Webber; ckl 2, 4, 5 Bouck, 1 Hovey & Fairbanks, 3 John Burth; pullet 1 Hovey & Fairbanks, 2 M. Beach Chapman, 3 A. G. Bouck, 4 Richard Treveal, 5 Bernard Osborne; pen chicks 1 Geo. Benham, 2 Hovey & Fairbanks, 3, 4 Bouck, 5 Mr. and Mrs. J. J. Cummings; pen fowls 1, 2 Bouck, 3 A. G. Barlow.

Partridge Rocks—1 Kriemheld Poultry Farm.

White Rocks—Cock 1 Lewis Harrington, 3 Philo Adams, 4 C. E. Dalton, 5 Kriemheld; hen 1 Kriemheld Poultry Farm, 2 Lewis Harrington, 3, 4 C. E. Dalton; ckl 1, 2 Harrington, 4 C. E. Dalton, 5 Adams; pullet 1, 2 Harrington, 3, 4, 5 Dalton; pen fowls 1 Adams, 2 C. E. Dalton; pen chicks 1 Harrington, 2 Dalton, 3 Adams.

Buff Rocks—Cock 1 Howard Tryon, 2 A. W. Dakin, 3 Ed J. Watkins, 4 S. J. Westlake; hen 1 John H. Hatch, 2 A. W. Dakin, 3, 4 Howard Tryon, 5 Westlake; ckl 1, 5 A. W. Dakin, 2 John H. Hatch, 3, 4 Drevendst & Hutchings; pullets 1, 2 Drevendst & Hutchings, 3 S. J. Westlake, 4 Howard Tryon, 5 Dakin; pen chicks 1 Dakin, 2 Drevendst & Hutchings, 3 Tryon, 4 Marsh C. Foster; pen fowls 1 Westlake.

White Wyandottes—Cock 1, 5 F. C. Lisk, 2 John Baity, 3 Jas. N. Prue, 4 J. H. Vandenbosch; hen 1 Prue, 2 Albert Eysvogel, 3 A. G. Warner, 4 Lisk, 5 H. Roy Bush; ckl 1, 2 A. Warner, 1, 5 Lisk, 4 Budd Gambee; pullet 1 Lisk, 2 W. R. Sperry, 3 Gambee, 4 Baity, 5 Warner; pen fowls 1 Lisk, 2 Kriemheld Poultry Farm; pen chicks 1 Baity, 2 Sperry.

Silver Laced Wyandottes—Cock 1, 2 Geo. W. Disinger, 3 Fred I. Roe, 4 V. Fowler; Hen 1, 4 Disinger, 2, 3 Roe; ckl 1, 5 Matthies Bros., 2, 4 Disinger, 3 Leroy W. Seigfried; pullet 1, 2 Disinger, 3, 4, 5 Roe; pen fowls 1 Kriemheld Poultry Farm; pen chicks 1 Disinger, 2 A. V. Fowler.

Golden Wyandottes—Cock 1 M. C. Davis, 2 Kriemheld Poultry Farm; hen 1 Kriemheld Poultry Farm; ckl 1, 2 J. R. Steele; pullet 1, 2 J. R. Steele.

Buff Wyandottes—Cock 1, 2, 4 C. H. & A. D. Churchill, 3, 5 J. H. Scott; hen 1 C. P. Dewitt, 2, 3, 4 Scott, 5 G. W. Augentine; ckl 1 C. H. & A. D. Churchill, 2, 4 Dewitt, 3 Scott, 5 Augentine.

Silver Pencilled Wyandottes—Cock 1 Kriemheld Poultry Farm, 2 F. M. Davis; hen 1 A. G. Warner, 2 Davis; pullet 1 Warner.

Partridge Wyandottes—Cock 1, 3 A. J. Sutesinger, 2 John L. Carpenter, 4 Geo. B. Turner; hen 1, 2 Carpenter, 4 J. R. Steele; pullet 1 Carpenter, 2, 4, Steele, 3 Geo. B. Turner; pen fowls 1 Sutesinger, 2 W. H. Kober, 3 Carpenter; pen chicks 1 Carpenter.

Columbian Wyandottes—Cock 1, hen 1 W. R. Sperry; ckl 1 Sperry, 2 M. S. Gooding, 3 Mrs. J. H. Scott; pullet 1 Gooding, 3 Sperry; pen chicks 1 Gooding.

Black Javas—Cock 1, hen 1 Kriemheld Poultry Farm.

Mottled Javas—Cock 1, hen 1, ckl 1, pen chicks N. W. Hoag.

S. C. Rhode Island Reds—Cock 1 Walker Bros., 2 De Graff Poultry Farm, 3, 4 Upland Farm; ckl 1, 2 DeGraff Poultry Farm, 4, 5 Upland Farm; hen 1 Walker Bros.; pullet 1, 2 De Graff Poultry Farm, 3 Walker Bros., 4, 5 Upland Farm; pen chicks 1 Walker Bros.; pen fowls 1, 2 De Graff Poultry Farm.

R. C. Rhode Island Reds—Cock 1 Frederick H. Fuller, 2 Wm. H. Harris, 3 Fred Brewster, 4 Upland Farm, 5 C. L. Connell; hen 1 David Waldron, 2 Upland Farm, 3, 4 Mrs. J. H. Scott, 5 Connell; ckl 1 Scott, 2, 4 John A. Burgess, 3 C. L. Connell, 5 Upland Farm; pullet 1, 2 E. W. Exstae, 3 De Graff Poultry Farm, 4 F. Lee Rogers, 5 Scott; pen fowls 1 David Waldron; pen chicks 1 De Graff Poultry Farm, 2, 3 Waldron.

Light Brahmas—Cock 1 R. J. Blake; pen chicks 1 John Duncan.

Dark Brahmas—Cock 1 Kriemheld Poultry Yards, 2 Dr. Gerin; hen 1, 2, 3, 4, 5 Kriemheld Poultry Yards; ckl 1 Kriemheld Poultry Yards.

Partridge Cochins—Hen 1, 2, ckl 1, 2 J. B. Foster; pullet 1 Foster, 2, 3 Chas. F. Young.

Black Langshans—Cock 1 C. H. Scales, 2 E. J. Williamson, 3 W. Dakin; ckl 1, 4, 5 Williamson, 2, 3 Lee & Son; hen 1 A. W. Dakin, 2 Lee & Son, 3, 5 Williamson; pen chicks 1 Williamson.

White Langshans—Cock 1, hen 1, ckl 1, pullet 1 Fred W. Heur.

White Faced Black Spanish—Cock 1, 2, 3, pen chicks 1 Siem & Bartsch, 3 C. R. Adams.

White Faced White Spanish—Ckl 1 Siem & Bartsch.

Blue Andalusians—Cock 1, 4 W. V. Young, 2, 3 Jas. Brennan, 5 Empire State Poultry Yards; hen 2, 4 W. V. Young, 3, 5 Empire State Poultry Yards; ckl 1 Young, 2 Empire State Poultry Yards; pullet 1 Brennan, 2 Empire State Poultry Yards, 3, 4 Young, pen chicks 1 Young.

S. C. White Leghorns—Cock 1 Ed. G. Sprague, 2 Adams & Butman, 3 Geo. A. Barrows, 4 Siem & Bartsch; hen 1, 2 Barrows, 3 Albert Maybank, 4 John F. Miltner, 5 Guy S. Coats; ckl 1, 5 Maybank, 2 Barrows, 3 Reuben Dalne, 4 Adams & Butman; pullet 1 Maybank, 2, 3 Barrows, 4 Coats, 5 Sprague; pen fowls 1 Dalne; pen chicks 1, 2 Barrows, 3 Coats, 4 Lisk.

5 Robert B. Peck.

S. C. Brown Leghorns—Cock 1 Arthur Meyers, 2 Jas. Dwyer; hen 1, 2, 3 Hutchins, 4 Dwyer, 5 John Barty; ckl 1 Albert H. Greene; pullet 1 Dwyer, 2 H. D. Hammon, 3 Dwyer, 4 Barty, 5 Green, 3 Dwyer, 4 Myers, 5 Hammond; pen fowls 1 Dwyer; pen chicks 1 Dwyer, 2 Myers, 3 Chas. F. Young.

R. C. White Leghorns—Cock 1, hen 1, 2, ckl 1, 2, 3, pullet 1, 2, 3, pen chicks 1 Siem & Bartsch; pen fowls 1 Kriemheld Poultry Yards.

R. C. Brown Leghorns—Ckl 1, pullet 1 E. G. Lynch; pen fowls 2 H. L. Stevens.

S. C. Buff Leghorns—Cock 1 A. G. Barlow, 2 C. P. DeWitt, 3 Le E. Merihew, 4 Wm. Ewald, Jr., 5 B. S. Benerlein; hen 1, 2 Benerlein, 3 Barlow, 4, 5 Merihew; ckl 1 Merihew, 3 Benerlein, 4 Hoovey & Fairbanks, 2, 5 Ewald, Jr.; pullet 1, 2 Ewald, Jr., 3, 4 Benerlein, 5 DeWitt; pen chicks 1, Benerlein 2, Ewald, Jr., 3 Merihew, 4 Barlow.

R. C. Buff Leghorns—Cock 2 Kriemheld Poultry Yards; ckl 2 E. J. Ryan & Son; hen 1 Kriemheld Poultry Yards.

S. C. Black Minorcas—Cock 1 James G. Krenn, 2 V. E. Lincoln, 3 Amos Crane & Son; hen 1 Lincoln, 2 Harry Messenger, 3 J. G. Krenn, 4 Amos Crane & Son, 5 M. V. Allen & Son; ckl 1, 2 M. V. Allen & Son, 3, 4 Krenn, 5 John W. Duncan; pullet 1, 2 Krenn, 3 Lincoln, 4, 5 Duncan; pen fowls 1 Krenn; pen chicks 1 Krenn.

S. C. White Minorcas—Cock 1, hen 1 Mrs. J. G. Osborne, 2 Harold Richards; ckl 1 Mrs. Osborne; pullet 1 Mrs. Osborne.

R. C. White Minorcas—Cock 1, hen 1, ckl 1, pullet 1 Mrs. Osborne.

R. C. Black Minorcas—Cock 1 W. V. Allen; hen 1, 3 Allen, 2, 4 A. J. Lutesinger; ckl 1 Allen, 2 G. E. Ferris; pullet 1 Allen, 2 Lutesinges; pen fowls 1 Allen, 2 Lutesinger.

Anconas—Cock 1, hen 1, ckl 1, pullet 1 Mrs. Chas. Furness.

Silver Bearded Polish—Cock 1, hen 1 Kriemheld Poultry Yards.

White Crested White Polish—Pen fowls 1 Kriemheld Poultry Yards.

White Crested Black Polish—Cock 1, hen 1, ckl 1, pullet 1, 2 Geo. Conner; pen fowls 1 Kriemheld Poultry Yards, 2 Frank Claxton.

Silver Spangled Hamburgs—Cock 1 Chas. Furness, 2 Kriemheld Poultry Yards; hen 1, 3 Furness, 4 Robt. Newbold; ckl 1, 2 Furness, 3 Newbold; pullet 1, 2 Furness, 3 Newbold; pen fowls 1, pen chicks 1 Furness.

Black Hamburgs—Cock 1, hen 1 Kriemheld Poultry Yards; ckl 1 Robt. Newbold.

Red Caps—Cock 1, hen 2 John Barty.

Colored Dorkings—Pen fowls 1 Kriemheld Poultry Yards.

S. C. Buff Orpingtons—Cock 1, 2 C. A. Watling, 3 A. Pierce, 4 J. B. Foster, 5 Irving Crocker; hen 1 Watling, 2, 4 Foster, 3 Mr. and Mrs. J. J. Cummings, 5 Crockers; ckl 1, 3 Pierce, 2 Mrs. J. C. Osborne, 4 Crocker, 5 Watling; pullet 1 Crocker, 2, 3, 5 Pierce, 4 Watling; pen fowls 1, pen chicks 2 Pierce.

R. C. Buff Orpingtons—Cock 1, hen 1 Cramer & Roy Pierce.

S. C. Black Orpingtons—Cock 1, 4 C. A. Watling, 2, 3 Upland Farm, 5 William Gifford; hen 1, 5 Watling, 2, 3, 4 W. H. Gifford; ckl 1, 2, 3 Gifford, 4 Watling, 5 J. M. Hutchins; pullet 1 Gifford, 2, 5 Upland Farm, 3, 4 Watling; pen fowl 1 Watling, 2 Gifford, 3 Upland Farm; pen chicks 1 Gifford 2 Hutchings, 3, 4 H. V. Young, Upland Farm.

S. C. White Orpingtons—Cock 1 Irving Crocker, 2 Kriemheld Poultry Yards; 3, 4 M. S. Gooding; hen 1 Crocker, 2, 3 Earl Gifford, 4, 5 Gooding; pullet 1 Gooding, 2, 3, 4 Earl Cook, 5 Crocker; pen fowls 1 Gooding, pen chicks 3 Gifford.

Houdans—Cock 1 Walter Bros., 2 Arch W. Jones 1 Walter Bros., 2 Jones, ckl 1 Walker Bros., 2 Jones; pullets 1 Jones; pen fowls 1 Jones.

B. B. Red Pit Games—Cock 2, Merritt Bros., 3 John A. Clark, 4 E. J. Watkins, 5 James Dwyer; hen 1 John Clark, 2, 3 Dwyer, 4 W. H. Harvey, 5 Merritt Bros.; ckl 1 Clark, 2 Merritt Bros., 3 Dwyer; pullets, 1, 3 Dwyer, 2 Clark, 5 Merritt Bros.; pen fowls 1 Clark.

Pit Games—Cock 1 W. E. Talby; hen 1 Kriemheld Poultry Yards; ckl 4 Talby, 5 Watkins; pullet 2 Talby; pen fowls 4 Kriemheld Poultry Yards; pen fowls 1 Talby.

Cornish Indian Games—Cock 1, hen 1 Kriemheld Poultry Yards.

B. B. Brown Red Bantams—Cock 1 C.E. & Lottie Ellis; pullet 1 Howard Stevens.

Brown Red Bantams—Cock 1, hen 1, pullet 1 Kriemheld Poultry Yards.

Red Pyle Game Bantams—Cock 2, hen 1 Kriemheld Poultry Yards.

Golden Duckwing Game Bantams—Cock 1 Kriemheld Poultry Yards.

Silver Duckwing Game Bantams—Cock 1, hen 1, pullet 1 Kriemheld Poultry Yds.

White Game Bantams—Cock 1, hen 1 Kriemheld Poultry Yards.

Birchen Game Bantams—Hen 1, ckl 1, pullet 1 Kriemheld Poultry Yards.

Golden Sebright Bantams—Cock 2 John Clark; hen 1 Clark, 2 Thos. Hume, 3 Kriemheld Poultry Yards; ckl 1 Clark; pullet 1, pen chicks 1 Clark.

Silver Sebright Bantams—Cock 1 Ernest G. Lynch, 2 Thos. Hume; hen 1 Kriemheld Poultry Farm, 2 Hume.

Buff Cochins Bantams—Cock 1 E. G. Bidlake, 2 Winwood Bant Yds; hen 1, 2 Winwood Bant Yds; ckl 1 Winwood Bant Yds; pullet 1 E. G. Bidlake, 2, 3, 4 Winwood Bant Yds; pen 1 Winwood Bant Yds.

Light Brahma Bantams—Cock 1, hen 1

Kriemheld Poultry Yards; ckl 1, 2, 3, 4, 5, pullet 1, pen 1 Mrs. J. H. Scott.

Dark Brahma Bantams—Hen 1, pullet 1 Earnest G. Lynch.

Rose Comb Black Bantams—Hen 1, pullet 1 Kriemheld Poultry Yards.

Rose Comb White Bantams—Hen 1 Kriemheld Poultry Yards.

Black Tailed Japanese Bantams—Cock 1 Siem & Bartsch, 2 Thos. Hume, 3 Kriemheld Poultry Yards; hen 1, 4, 5 Siem & Bartsch, 2 Hume, 3 Kriemheld Poultry Yards; ckl 1 Hume, 2, 3, 4, 5 Geo. Conner; pullet 1 Hume, 2, 3 Conner.

Any Other Variety Bantams—Ckl 1, pullet 1 M. O. Davis.

Belgian Hares—Buck young 1 Orville Osborne, 1 E. J. Ryan & Son, 2 Charles Branchle; Doe young 1 Branchle, 2 E. J. Ryan & Son; Doe and litter 1 Branchle.

Rabbits—Doe and litter 1, 2 E. J. Ryan & Son.

Angora Cats—Male 1 Mrs. F. L. Arnold, 2 Harvey Huff.

Coon Cat—3 C. E. & Lottie Ellis.

Bitch Ferrets—1 G. A. Dwyer.

Albinos Ferrets—1 G. A. Dwyer.

Raccoon and Dog—1 Mrs. Thos. Ryan.

Pearl Guineas—1 Mrs. J. H. Scott.

Mandarin Ducks—Cock 1, hen 1 Foster Parker.

Wood Duck—Cock 1, hen 1 Foster Parker.

Mallard Duck—Cock 1, hen 1 Foster Parker.

Black Duck—Cock 1, hen 1 Foster Parker.

Pintail Duck—1 Foster Parker.

Golden Pheasants—Cock 1, hen 1 Foster Parker.

Silver Pheasants—Cock 1, hen 1 Foster Parker.

English Pheasants—Cock 1, hen 1 Mrs. Thos. Ryan.

Pea Fowls—Ckl 1, pullet 1 Ed. W. Tripp.

Pekin Ducks—Cock 1 Frank Van Nostrand, 2 Leroy Seigfried, 4 Oscar Stenzel; hen 1, 2 Van Nostrand, 3 Mrs. R. D. Button, 4 Oscar Stenzel, 4 Seigfried; ckl 1 Seigfried, 2, 3 Van Nostrand, 4 Hicks, 4 Button.

Pekin Ducks—Pullet 1, 2 Van Nostrand, 3 Seigfried, 4 Hicks, 5 Button; pen young, pen old, Van Nostrand.

Rouen Ducks—Cock 1, 3 Howard Tyron, 2 Kriemheld Poultry Yards; hen 1 Kriemheld Poultry Yards, 2, 3 Tyron, 5 Button; ckl 1, 3 Tyron, 4 Button, 5 Kriemheld Poultry Yards; pullet 1, 2 Tyron, 3, 5 Kriemheld Poultry Yards, 4 Button; pen 1 Tyron.

Cayuga Ducks—Cock 1, hen 1 Mrs. R. D. Button; ckl 1, 2, 3 H. E. Harmon; pullet 1, 2 Harmon, 3 Button.

Indian Runner Ducks—Cock 1, hen 1 Irving E. Cook, 2 Mrs. R. D. Button, 3, 4 G. A. Dwyer; ckl 1, 2, 3 Cook; pullet 1 Cook, 2 Button; pen old, pen young Cook.

Muscovy Ducks—Cock 1, hen 1, pullet 1 Mrs. R. D. Button.

White Muscovy Ducks—Cock 1, hen 1 Mrs. R. D. Button.

Aylesbury Ducks; Crested White Ducks—Cock 1, hen 1, pullet 1 all to Mrs. R. D. Button.

Grey Call Ducks—Cock 1, hen 1 Mrs. R. D. Button, 2 Kreimheld Poultry Yds; pullet 1 Button, 2 Kreimheld Poultry Yds; ckl 1 Kreimheld Poultry Yards.

Toulouse Geese—Cock 1, hen 1 Dr. John Gerin.

Emden Geese—Cock 1, hen 1, ckl 1, pullet 1 Ed. Tripp.

White China Geese—Cock 1 Ed Tripp, 2 L. Seigfried; hen 1 Seigfried, 2 Tripp; ckl 1, pullet 1 Tripp.

Brown China Geese—Cock 1, hen 1, ckl 1, pullet 1 Ed Tripp.

African Geese—Cock 1, hen 1, ckl 1, pullet 1 Ed Tripp.

Wild Geese—Cock 1, hen 1 Ed. Tripp.

Buff Pied Geese—Cock 1, hen 1 Ed Tripp.

Mammoth Buff Geese—All to Ed Tripp.

Grey Geese—Cock 1, hen 1 Dr. John Gerin.

Canadian Geese—Hen 1 Foster Parker.

White Holland Turkeys—Cock 1 Fred DeGraff, 2 Oscar Stenzel; hen 1 Oscar Stenzel, 2 DeGraff; ckl 1, pullet 1 DeGraff.

PIGEONS.

White Pouters—Cock 1, hen 1 F. A. Jordan.

White Pied Pouters—Cock 1, hen 1 (1905) cock 1, hen 1 A. G. Sincerbeaux.

Blue Pied Pouters—Hen 1, 2 A. C. Sincerbeaux.

Red Carriers—Cock 1, hen 1 M. B. Chapman.

Silver Cream Carriers—(1905) hen 1 M. B. Chapman.

White Fantails—Cock 2 Robt. Westover, 3, 4, 5 Ben M. Willis; hen 3 Westover.

White Fantails—Cock 1, hen 1, 2, 4, 5, cock (1905) 1, 2, 3, 4, hen 1, 2, 3, 4 Ben Willis.

Black Barless Swallows—Cock 1, hen 1 Robt. Westover.

Blue Wing Turbits—Cock 1 Paul Kober, 2 Sincerbeaux; hen 1 Sincerbeaux, 2 Kober.

Red White Side Tumblers—Hen 1 Robt. Westover.

Almonds—Cock (1905), hen 1 Mrs. J. H. Scott.

Splash—Cock 1, hen 1 Mrs. J. H. Scott.

White Jacobins—Cock 1, hen 1, cock (1905) 1, hen 2 Herbert R. Forshay, cock 2, 3 Mrs. J. H. Scott, hen 2, 3 Scott.

Yellow—Cock 2, Mrs. J. H. Scott; hen 1 Forshay, 2, 3 Scott.

Red—Hen 1 H. R. Forshay, 2, 3 A. C. Sincerbeaux; cock 1 Mrs. J. H. Scott.

Black—Cock 1, cock (1905) 1, hen 1, 2,

3 H. R. Forshay.

A. O. C.—Hen 1 Mrs. J. H. Scott, 2 H. R. Forshay.

Yellow Magpies—Cock 1, hen (1905) 2 A. C. Sincerbeaux.

Blue—Cock 1 W. H. Harris.

Archangels—Cock 1, hen 2, (1905) hen 1 F. A. Jordan.

Blue Check—Cock 1, 2 W. H. Harris, 3 Stubbs & Harvey, 4 M. B. Chapman; hen 1 J. G. Atwater, 2 Harris, 3 Stubbs & Harvey.

Red Check—Cock 1 W. H. Harris, 2 Dr. S. J. Fairbanks, 4 John Gerin, cock (1905) 1 Dr. Fairbanks.

Silver—Cock 1 John Gerin, 2 Dr. S. J. Fairbanks, 3 W. H. Harris; hen 1 Dr. Fairbanks, 2 Gerin, 3 Harris.

Blue Flying Homers—Cock 1 W. H. Harris, 2 M. B. Chapman, 3 Stubbs & Harvey; hen 1 W. H. Harris, 2 Chapman, 3 Harris, 4 Stubbs & Harvey; (1905) cock 1 Harris, hen 5 Harris.

Black—Cock 1, hen 1 John Gerin.

White—Cock 1, 2, 3, 4, hen 1, 2, 3, 4, (1905) cock 1, 2, 3, 4, hen 1, 2, 3, 4 all to W. H. Harris.

Black Check Show Homers—Cock 1, hen 1, (1905) hen 1, cock 1 W. H. Harris.

White Dutchess—Cock 2, hen 2 J. G. Atwater.

Yellow Dragoons—Cock 1, hen 1 A. C. Sincerbeaux.

White—Cock 1, 2 A. C. Sincerbeaux.

Red Crested Hemlets—(1905) cock 1, hen 1 A. C. Sincerbeaux.

Java Sparrow—Cock 1, hen 1 Jas. J. Dwyer.

ROWLAND'S ROUND-UP.

A few days ago I took a trip out on Long Island and visited the farm of Sidney Y. Sullivan, at Greenlawn, who breeds White Wyandottes on a farm of about fifty acres. Sid. is a farmer and only carries chickens as a side line. His main house is 150 feet long, faces the south, and is divided into ten pens, each 10x10. A three foot alley runs the length of the house, and gates open into each pen. A brooder house 40 feet long adjoins the breeding pens, and a cook room 10x12 is at the extreme end. This makes it very convenient as all the work can be done under one roof. The house stands in an apple orchard, and large shady runs are provided for the breeders. Some fifteen colony houses are set around under the trees and the young stock enjoys free range which is so necessary to insure size and vigor. I found about seventy breeders of very good, even quality, one pen in particular was headed by a nice cock, pure white, and with a good body. The hens were all good birds and laying well.

I then went to Wm. H. Lewis' place at Huntington, L. I. Mr. Lewis is one of the old school of poultry breeders, having done most of his exhibiting in the early 90's; he can therefore tell of many pleasant memories of those early battles in the show room. Here I found some of the finest Partridge Wyandottes I have ever seen. The females had the narrow distinct penciling that is so much sought after by breeders. The males were a rich mahogany color and had the true shape of a Wyandotte. White Indian Games, which so many people think are extinct, were there in the true Indian type and pure white color. They are too good a breed to die out. Mr. Lewis also has some Cornish Indians and White Cochins Bantams that show remarkable quality. One of the features of the Lewis Farm is, that as Mr. Lewis hires the place, all the buildings are made portable, even his brooder house, which is 12x40, knocks down into sections 6x6. All his breeding pens, colony houses and brooders are the same way. The farm is an ideal one for raising chickens, there being plenty of shade and grass, with a stream running across the farm. The young stock all drink from the brook, so no water is necessary for them. In fact, this farm is as nice a place for raising show poultry as can be found. That is, as I have found.

HERBERT B. ROWLAND.

CHICKEN POX

A Disease Requiring Scientific Investigation

In tropical countries we meet with diseases amongst fowls which are either very rare or unknown in Europe; Chickenpox is a notable one of these. Vain is the search for information on this topic in the poultry books of Great Britain, for it is practically unknown there; and it is necessary to turn to books that deal with poultry keeping in the tropics to find any mention of it.

The object of this article is to call attention to some interesting facts and fancies regarding the disease and to urge members of the club to closely observe and study the same.

The disease in Ceylon is well known by the Singhalese under the name of "Wusuria" or "Kookul Wasunguthey" and by the Tamils as "Visoorie," this is the same name as is given to smallpox in man; though of course there is no connection whatever between the two diseases.

The disease is quite a localized one in the sense that it is not a constitutional disease. It commences and is usually confined to the face, comb, wattles, ears, earlobes, nostrils and mouth. It is sometimes found in the bare patch of the chest under the wing, but this occurs only in advanced and neglected cases and is due to the affected bird rubbing its head there to alleviate the irritation. It is said also to occur on the feet, this being due to the foot being used to scratch the pox on the head. The disease is well known in India. It is also well known in Caledonia, Guina, Jamaica and the West Indies generally.

It is a very remarkable fact that the reputed causation of this disease is exactly the same in the West Indies as it is in Ceylon. Here the natives hold that it is some way connected with the Cashew nut, that the disease comes with the Cashew season. The fowls are supposed to get it by either eating the thin shell, or dry membrane surrounding the nut, which everybody knows by experience tastes very bitter and acrid. This view is identical with that held by the natives in Jamaica, New Caledonia, etc. The coincidence is remarkable though it lacks scientific basis.

While on the subject of "native opinion," it is interesting to note that the cure for the disease is also identical on both sides of the globe. The negroes in the West Indies believe that the one cure is the free application of the juice of the lemon. Here in Ceylon both amongst Singhalese and Tamils the great remedy is the free application of the juice of the lime. Doubtless many have seen the appu or cook squeezing out the lime juice into the head and into the eyes, nose and mouth of the wretched fowl. The efficacy of the treatment is as useless as their theory of causation is incorrect.

The disease as has been stated is a very localized one, being practically confined to the head. It is very contagious and breaks out in regular epidemics. The disease varies greatly in virulence; some epidemics are very mild, whilst others devastate the whole poultry yard.

While the disease is all one, there are two distinct varieties or types of it, which for all practical purposes may be termed the dry and the moist; or, better still, the Warty and Vesicular. The difference only depends upon the surface upon which the pox develops, i. e., whether on the epidermis (skin) or on the mucous membrane.

If the pox grows on the mucous membrane of eyelids or nostrils or mouth, it will be the Moist or Vesicular variety. If it develops on the skin of the face, or on the comb, wattles or earlobe it will be the Dry or Warty variety.

The Warty variety is relatively of little consequence. In some instances it may be left to run its course; the danger of doing that is that it may spread to the mucous membrane and then become the dangerous Vesicular variety. There is little danger in the warts themselves, they grow for a period and eventually after a fortnight or so drop Vesicular off and the bird is cured. The variety on the other hand is a most serious disease and will rapidly disseminate a yard.

The reason is obvious for this, the pox on the moist mucous membrane grows rapidly and is much larger than the warty pox. It commences as a small vesicle or moist papule which rapidly grows in size. If it begins on the conjunctiva it soon closes up the eyelids, which soon swell to an enormous size. The eyeball itself is at first never affected, but after the disease has gone on for several days the eyeball itself may become involved and destroyed. The effect of the swelling is to prevent the bird seeing and, thus being unable to eat or drink, wastes and dies.

When the pox is on the nasal mucous membrane, the whole nasal cavity at once becomes blocked. The bird breathes with open mouth and gasps for breath.

When the pox is in the mouth, the mouth or the throat may become much blocked with the pox, and the bird must die as it cannot eat or swallow.

The Dry or Warty variety consists of a small raised scab, crust, or wart, much the size of a split pea or gram. It is dark brown in colour, is hard, dry and roughish on the surface. It seems to cling to the skin like a limpet to a rock. If the wart is wrenched off a round shallow ulcer is found on the skin, the scab is the cap of the ulcer; there is little or no bleeding on removal.

Isa Tweed in his book on "Poultry Keeping in India" describes chickenpox and mentions that there are two varieties of it. He states that the disease is communicable to man (!) In this he surely must be in error.

The disease in the French possessions in the West is known as "Pian." A careful investigation of it was made by "Dr. N." and his report appeared in the "Bulletin de l'Union Agricole Caledonienne." This investigator discovered microscopically that the ulcer contained a fungus, a mycelium with spores, known as *Aspergillus fumigatus*; and this he found growing on the floor of every ulcer. He isolated it and successfully proved that this was

the cause of Pian. Some varieties of the fungus he found to "become very virulent under favourable conditions of heat and moisture."

He then investigated the question as to whence the infection came, and answers it thus "From grain and from the soil. The surface of the grain is the habitat by preference of the *Aspergillus*. We receive them in incalculable numbers in bags of rice. Scattered over the soil they there find the moisture and heat to maintain their virulence. In addition to this their resistant powers and their vitality are very great. Three or four years after cultivation they may be reproduced." If the rice were imported from India, it may possibly explain the introduction of this East Indian disease to the West Indies.

"Dr. N." makes one very remarkable statement that will need a good deal of corroboration, it is that the fungi "sometimes attack the eggs in process of incubation, and are thus transmitted to the embryo. The inoculation usually occurs through the medium of an abrasion on the delicate skin of the chicken about the bill and eyes."

It would be interesting to have the disease in Ceylon microscopically investigated for comparison with the findings in the West. Does the *Aspergillus fumigatus* flourish in the chickenpox? Can this fungus be found upon our paddy? Is the geographical distribution of this malady continuous with the commercial distribution of this grain?

Now as to the treatment of the disease. No internal remedy of any kind is required. The cure of the Warty variety is most simple. The following plan never fails to effect a complete cure. When chickenpox is discovered in a run do not think of isolating the sick bird. All the birds are probably infected with the fungus and nothing is gained by isolation, therefore let them remain and treat thus: First the bird that actually shows the Warty trouble is caught, the wart or scab must then be forcibly removed, say with a matchstick; when removed dip the end of the stick into some pure undiluted Jeyes' fluid and apply it firmly to the raw ulcer, rubbing it in well. Treat every wart in this way. The idea is to kill the fungus in situ. It is of no avail to apply the neat Jeyes' fluid on the top of the scab; it might as well be applied to the sole of a boot, for it would never reach the mycelium lying underneath. Every fowl that shows signs of the disease must be so treated. A fresh application should be made to each ulcer for the next two or three days at most; the disease will be cured. After the affected birds have had ulcers treated with neat Jeyes' fluid, all the apparently healthy birds in the run must be caught and have their faces, combs, wattles, beaks, earlobes, etc., well washed with some diluted Jeyes by means of a rag. The strength of this lotion should be a tablespoonful Jeyes to a breakfast cup of cold water. The healthy birds are to be thus treated for the next two or three days. The control of the epidemic is most marked. The most convenient time to do these washings is in the morning when the birds are first let out of the fowlhouse. It requires two people to do it, a servant catches the birds one by one, their faces are washed and the bird is then put out into the run. None of the birds so treated can acquire the disease.

"Dr. N." says that the Tincture of Iodine is a good thing to use on the ulcer. Jeyes' fluid will however be found safer and quite as certain.

What is to be done in the Moist variety of the disease? If vigorous treatment is not resorted to at once the affected bird must die. Therefore use Jeyes' fluid neat. Drop it freely into the eye, or nose and, if necessary, swab out the mouth with a feather dipped in it. This treatment can be confidently recommended. The incidence of the disease is remarkable. If a run contains imported fowls, or countrybred fowls from imported stock, such birds will be found in the first place to be more prone to the disease than the indigenous fowls of this country and, secondly, these birds suffer from it more severely than these indigenous birds which do contract the disease.

DATES CLAIMED.

Under this heading there will appear each week a list of all the shows claiming dates for the coming season. Secretaries of poultry, pigeon and pet stock exhibitions will confer a favor by sending in the dates selected as promptly as possible. It is not only a convenience and guide to secretaries of shows that have not selected their dates, but of great interest to readers of *The American Fancier*, a majority of whom are exhibitors.

The name of secretary and judges will be appreciated when sending in notices.

Aug. 21-24—Cortlandt, N. Y. Cortlandt County Agricultural Society, W. J. Greenman, Secretary.

Nov. 12-17—Houston, Tex., Howey S. Fox, Jr., Secretary.

Nov. 12-17, San Jose, Cal. Santa Clara Valley Poultry and Pet Stock Association, E. Van Every, Secretary, Edenvale, Cal.

Nov. 27-Dec. 1, York, Pa. C. T. Cornman, William G. Minich, Judges; J. N. Lovett, Secretary.

Dec. 3-9, San Francisco, Cal. California Poultry Association, J. C. Williams, Secretary, Fruitvale, Cal.

Dec. 4-8—Youngstown, O., H. J. Cossler, Secretary.

Dec. 4-8—Wilkes Barre, Pa., David T. Miller, Secretary.

Dec. 4-8—Providence, R. I., Rhode Island Poultry Association, W. I. Brown, Secretary, 6 Exchange Place.

Dec. 5-8, Grand Rapids, Wis. Grand Rapids Poultry Association; E. G. Eggert, Secretary; Frank Heck, Judge.

Dec. 5-8, Paterson, N. J. Paterson Poultry, Pigeon and Pet Stock Association; Charles Frost, Secretary.

Dec. 6-9—Danbury, Conn., C. H. Brundage, Secretary.

Dec. 11-14, Lewistown, Mo. Lewistown Poultry Association; A. O. Brooking, Secretary, La Belle, Mo.; Frank Heck, Judge.

Dec. 12-14—Kingston, N. Y., F. E. Miller, Secretary, Rifton, N. Y.

Dec. 12-15—Corsicana, Tex., W. E. Elliott, Secretary, Box 281.

Dec. 12-15, Fresno, Cal. Fresno Poultry, Pigeon and Pet Stock Association, George R. Andrews, Secretary.

Dec. 12-15, Stoughton, Wis. Stoughton Poultry Association; Sylvanus Ames, Secretary; Frank Heck, Judge.

Dec. 19-22, Holland, Mich. Holland Poultry and Pet Stock Association; L. S. Sprietsma, Secretary; Frank Heck, Judge.

Dec. 19-22, Mohnsville, Pa. Wyomissing Poultry Association; George W. Hatt, Secretary, Mohns' Store, Pa.; Charles T. Cornman, Judge.

Jan. 7-11, Aurora, Ill. Aurora Poultry Association; Walter M. Smith, Secretary; Frank Heck, Judge.

Jan. 8-11, Middletown, Conn. Middlesex County Poultry, Pigeon and Pet Stock Association; Arthur L. Clark, Secretary.

Jan. 9-12, Alameda, Cal. Alameda County Poultry Association, C. G. Hinds, Secretary.

Jan. 9-13, Chilton, Wis. Chilton Poultry and Pet Stock Association; A. Stransky, Secretary; Frank Heck, Judge.

Jan. 15-19, 1907—Kansas City, Mo., P. H. DePree, Secretary.

Jan. 15-19—Angola, Ind., Tri-State P. and P. S. Association, W. K. Sheffer, Secretary.

Jan. 16-20, Charlotte, N. C. Charlotte Poultry Association; W. B. Alexander, Secretary.

Jan. 28-Feb. 2, Cleveland, Ohio. Cleveland Fancier's Club Co.; F. L. Gruchl, Secretary; 1922 Woodland Ave.

Jan. 30-Feb. 2—St. Albans, Vt., C. O. Barrett, Secretary.

Feb. 5-9, Hudson, Mich. Souther Michigan Poultry Association; Ed. R. West, Secretary; Frank Heck, Judge.

The Gedney Farm Poultry Yards

WHITE PLAINS, NEW YORK

The Gedney Farm Poultry Yards, on the possessions of Howard Willetts, at White Plains, Westchester County, New York, may be classed as one of the finest in the country, without any fear of contradiction. The half-tones accompanying this touch-and-go article give the reader a pretty good general idea of the plant, so it is only necessary to say that Frank W. Gaylor is in the management, and every reader who is in the least acquainted with poultrydom will know that everything is in good hands.

In fact the entire plant was established under the personal supervision of Manager Gaylor, who has had a

Yards won this by obtaining fifty-seven points out of a possible sixty; there were about two thousand birds cooped for this show. Some of the local exhibitors made strenuous endeavors to capture the trophy, one in particular showing sixty White Leghorns, especially for the purpose. Gedney Farm obtained the award by about twenty points over the strongest competitor for the silverware and honor, having showed sixteen Buff Orpingtons in the open class and two breeding pens; there being sixty-four Buff Orpingtons in the competition. The Gedney Farm won 1st, 2d and 3d cock, 1st, 2d and 3d hen, 1st, 2d and 3d cockerel,

BUFF ORPINGTON BEAUTY

long experience in this direction. The main features of the plant are its practicability and labor-saving devices, that being Manager Gaylor's strong suit in such particulars which so becomes the thoroughly practical poultryman as he is acknowledged to be with the legions who are proud to call him a friend.

The half-tone of the Country Gentleman's Silver Cup, which the Gedney Farm Poultry Yards won at Albany, N. Y., January 10-13, 1906, for the best display in all varieties competing, is one of the most cherished prizes in the large collection gathered in by Manager Gaylor. The Gedney Farm Poultry

COUNTRY GENTLEMAN'S CUP

BUFF ORPINGTON BEAUTY

1st, 2d and 3d pullet, and 1st and 2d pen on Buff Orpingtons at this exhibition; besides 2d cock, 2d and 3d hen, 1st, 2d and 3d cockerel, 1st, 2d and 3d pullet in the Cornish Indian Game class at the same show.

At Madison Square Garden, January 2-6, 1906, Gedney Farm won first and American Orpington Club Special Ribbon on pen, fourteen pens competing; and third on pullet.

Single Comb Buff Orpingtons, White Wyandottes, Cornish Indian Games and Single Comb Black Minorcas are the specialties on the Gedney Farm, the latter being fed for egg production only.

A Weekly Journal Devoted to Standardbred Stock.

The Black Wyandotte Cockerel illustrated on title page is a beautiful picture, but hardly conveys the real fine points of a bird that was considered the best cockerel of this variety we have ever handled. Being typical in shape when shown in the coop, grand in head and comb, he had that lustrous green plumage so much sought after by lovers of black fowl. Mr. Weed has a prize in this bird, but his "Weedlets" has others growing up that are in the same class. There are no weeds in Weed's flock. They are pulled up before they grow seed.

* * *

Mr. Frank M. Thomas, Jr., Catskill, New York, has purchased the entire flock of Indian Games formerly owned by James Windsor, of Johnstown, N. Y., and will make a specialty of breeding this fine variety in the future. Mr. Thomas is fortunate in securing such a good strain of birds as Mr. Windsor possessed. We are glad to note the increasing interest in Cornish Indians and trust Mr. Thomas will be very successful in raising a fine bunch of youngsters for the fall and winter campaign.

* * *

Fred. W. Hughson, manager of the big Mundy Farms, Big Flats, N. Y., advertises some rare bargains this week in Cochins, Hamburgs and Wyandottes. He will dispose of all these, including the winners at many shows,

in order to make room for the Mediterranean varieties and Plymouth Rocks which he will breed in the future as he is going extensively into the egg and broiler business.

* * *

One of the busiest boys in the poultry district of New York these days is "Billy" Stanton. His place on Dey street, is filled daily with buyers of fine poultry, pigeons, dogs, cats and everything else in the live stock line, for Sir William sells anything and everything in the animal kingdom that has fur or feathers and even has been known to sell a Mexican hairless dog if the opportunity affords. W. J. Stanton has built up a fine trade by using strictly honorable business methods.

* * *

The York City Poultry, Pigeon and Pet Stock Association will hold its first annual show November 27th to December 1, 1906, at York, Pa. The following officers are in charge: President, L. G. Plath; Vice-President, Dr. J. B. Kain; Secretary, J. N. Lovett; Treasurer, A. C. Epply; Superintendent, J. C. Plathy, all of York. The Judges selected are: Charles T. Conance and William G. Minnerty. This first annual function of the above society should prove a big success, as York and its vicinity is as full of chicken fanciers as a Bowery restaurant is full of flies in August. The erudite Cornishman and debonair "Hamburg Bill" Minich will have plenty of work cut out for them.

* * *

The Mating List sent out by the Gedney Farm, White Plains, N. Y., is one of the neatest and most instructive we have seen this season. The able manager of that fine plant, the veteran Frank W. Gaylor, is not only a fine chicken culturist, but knows how to use the English in a clean cut style when describing his birds. The great specialties on this great poultry plant are Orpingtons, Indian Games, S. C.

Black Minorcas, White Wyandottes and Embden Geese. It goes without saying that the quality is of the highest.

* * *

Our old friend, T. Farrer Rackham, who is and has been in charge of the cooping department of Spratt's Patent since the latter started his American branch some twenty years ago in New York and Newark, informs us that Spratt's are just terminating the largest and most extensive show season in the history of the company. Among the list of dog, poultry, pigeon, cat and pet stock shows contracted for are: The Westminster Kennel Club Dog Show, Madison Square Garden, New York City, the L. K. A. Kennel Club Show, Mineola, L. I., New York Poultry Show, Madison Square Garden, Englewood Poultry Show, Boston Poultry Show, Mechanic's Building, Duquesne Kennel Club Show, Pittsburgh, Pa., and the Lynn and Haverhill Dog Shows, Port Richmond Dog and Poultry Shows, Staten Island, Scranton Poultry Show, The Diamond State Poultry Show, Wilmington, Del., Wolverine Kennel Club Dog Show, Detroit, Mich., Memphis, Tenn., Dog Show, Cincinnati Poultry Show, Cleveland Fanciers Poultry Show, Cleveland, Ohio, Newark Poultry Show, Paterson Poultry Show, Rutherford Poultry Show, Wisconsin Kennel Club Dog Show, Milwaukee, Wis., Washington, D. C., Dog Shows, Mineola Poultry Show, Dover Poultry Show, Trenton Poultry Show, and the Buffalo Kennel Club Show, Buffalo, N. Y. We are also making arrangements at the present for the Atlantic City Kennel Club Dog Show, St. Louis Dog Show, San Francisco Dog Show and a number of others. A big list for so early in the season, and an indication of what the Show season of 1906 and 1907 promises to be.

* * *

All records will be broken as far as the number of poultry shows to be held in the United States and Canada are concerned. It will require a big additional force of judges, and should prove an excellent opportunity for the younger judges to make their mark. The supply of all varieties in judges is exceedingly scarce. The fact is: The varieties of poultry have increased more rapidly than the list of available judges that are familiar with each and every one of the standard varieties. Specialty judging has to a certain extent overcome some of this lack of competent judging material at the large shows, but at many of the smaller functions the size of the cash box and its contents limit the number of judges often to one lone individual, and the latter is frequently compelled to score and judge by comparison, varieties he is not well posted on, and this leads to many of the little kicks we hear at shows.

* * *

This is particularly true of the Game and Game Bantam section of important shows. Judges that are thoroughly familiar with these varieties are scarce to an alarming degree. There is nothing in the feathered line that requires more skill in judging than Games and Game Bantams. It takes a genuine and experienced breeder of the latter to appreciate the fine points of a real royally bred bird. Many have tried their hand at judging these varieties and were found wanting.

This reminds us of the fact that America's premier judge of Games and Game Bantams, Senator Alexander Ferguson Peirce, of New Hampshire, has again received the call to judge these classes at the great Toronto Show next fall. Although our friend, Miller Purvis, once referred to "Alec" Peirce as one of the younger judges, he made a grievous mistake and evidently sized up the little Game expert by his ever youthful face. For it is a fact that the Senator, barring a bald spot on his coco, is as young looking as he was twenty years ago, when he and Spaulding were rivals in the big Game classes. The Hon. Mr. Peirce bred Game chickens when some of our young judges and editors were being started in life on Mellen's food.

* * *

The hen and the cow have been fighting each other for the supremacy in the commercial world for many years, and "biddy" has demonstrated the fact that "bossy" must join the Down and Out Club. The latest solar plexus delivered by the feathered lady to the hairy quadruped happened in England recently and the scene of the battle was the River Thames and the participants the Oxford and Cambridge boat crews. A special cable to the New York Sun on the famous race contained the following:

"The race of this year had a special interest, and the result was watched for by others besides the sporting public of Great Britain, for Cambridge's victory is one of eggs. When the Cambridge crew began its practice on the Thames a few weeks ago its performance did not promise any improvement on its racing form of last year, when it lost to Oxford; but suddenly it improved wonderfully, and the rumor went around that the improvement was due to eggs. The rumor was true; the men were dieting on eggs. Four eggs each for breakfast was a mere trifle for the Cantabs. The staple of their daily food was eggs."

"Of course there was a good deal of ridicule at first, but the experts in such matters took a serious view of the innovation. For example, Dr. Willoughby, a well-known expert on food products, said, when interviewed:

"Eggs are really the only concentrated food known. When I am pressed with work, I find nothing better than a few eggs broken into milk and swallowed. In sustaining power I think they are as good as a hearty dinner."

"Dr. Willoughby added that he was not surprised that the Cambridge crew should be doing so well on eggs, eggs being practically all food, and easily digested. The Cambridge oarsmen were further cheered by the information that the famous St. Leger winner, Birmingham, which beat the Derby winner Priam for the great Doncaster race in 1830, was trained for the race on an egg diet."

In the same dispatch it further states:

"So Cambridge persevered with eggs, while Oxford and her partisans sneered. Meanwhile, of course, all good Cambridge men in London had to eat eggs. There was a tremendous run in the capital's restaurants and boarding houses for eggs, and the price of eggs in the market went up. It is likely now to go higher."

The London comic papers found a great opportunity in the new training diet, and "Punch" and its rivals were full of remarks upon the 'eggstraordinary diet,' the 'interesting eggperiment,' &c."

The effect the above produced on egg dealers and consumers in the United States was remarkable. Eggs advanced four cents a dozen in twenty-four hours.

* * *

Unfertile eggs taken from incubators are often thrown away as being useless. This is a mistake. Such eggs when removed from an incubator after the first test, and which are perfectly clear, are fit to use for baking, and bakers readily buy them. We have used them for such purposes and found nothing to complain of on the score of being tainted. But they should be sold as "Tested Unfertile Incubator Eggs," and not rushed in the market and palmed off on the grocer as fresh eggs. That is a fraud, pure and sim-

le, and no poultry farmer who values his good name should be guilty of such practices. There is no business that requires a stricter regard for absolute freshness and high quality in all products sold from the ranch than the poultry and egg business. Poor butter can be detected, but there is a pile of sin encased in a suspicious egg.

Some of our learned friends, scientists and ration mixers for chickens, will be interested to read the following little report in regard to chicken feeding that may jar their "intellectuals" to the verge of despair. But these practical little jolts are all to the good. They make us all start the machinery working in the gray closet. Our esteemed contemporary, the Rural New Yorker, started a query regarding egg yields, &c., and requested the readers of that excellent paper to speak out in meeting. Here is what a gentleman or lady who signs himself or herself, V. R. W., and who hails from Lysander, N. Y., has to say:

"We have 48 hens, most of them Buff Orpingtons, and the remainder grade R. I. Reds, and three days during the present Winter (January 14, 22 and February 17), they have laid 35 eggs. On many other days they have laid more than 30, while the daily average for the month of January was a fraction over 28. Our hen-houses are not very warm, and have been cleaned only four or five times since the first of October. The fowls have had no meat, cut bones, animal meal nor commercial grit. They have been heavily fed and are very fat. Many of the other pet theories of poultrymen have been thrown to the winds, but the lady of the house is very fond of hen society."

We do not question the above; others may, for they have that privilege. On the face, it looks contrary to the rules our poultry savants formulate. Years ago when we were in the egg business and drove many miles each week to gather up eggs from poultry raisers with whom we had contracts for fresh eggs, we remember several instances where we always secured the best supply of eggs in the coldest months of the year. One was in the village nearby, where a lady had a big bunch of Leghorns in a very small house and a not over large yard. She fed Indian corn whole only, the extra feed being table scraps, and occasionally some wheat bran. Once only, we heard her complain that she did not get quite as many eggs as the week before and that was because she ran out of corn and had to feed "Injun meal," as she called it. The other place was a farm where some two hundred Leghorns were kept. The only feed at night in cold weather was whole corn, warmed on the stove, and fed in that state to the hens. In the morning a mash of wheat middlings and table scraps was the simple breakfast. All we have to say is, the Leghorns delivered the goods, and the eggs were first-class in quality. These are facts. Still we did not feed our hens that way, preferring a ration in the morning of one-third bran, one-third ground oats and one-third corn meal, mixed and steamed with cut timothy and clover hay; with wheat or corn at night, and fresh beef bones twice a week. Oyster shells ad libitum and four inches of gravel on the floor. That was the complete outfit of feeding. The results as shown by our egg records justified this system of feeding. The quality of the eggs was excellent and the condition of the hens in the spring as fine as could be asked for.

The Buff Wyandotte cockerel, "Gilt-edge," first at Frankfort, N. Y., 1906,

illustrated on another page of this issue, was exhibited by Mr. S. A. Howland, Granville, N. Y. He won in very strong company and is one of the high-grade Buff Wyandottes that it is a pleasure to handle. He's all to the Buff, as "Andy" Riddell would stop to remark.

Secretary-Treasurer Chas. H. Brundage, of the Western Connecticut Poultry Association, of Danbury, Conn., announces that the boys are hustling for specials and the prospects are brighter than ever for the show, which is scheduled for December 5-8.

The fellow with a grievance often visits this office. The grievance is usually against some other fellow, and the grievance has in most instances arisen from some egg or poultry deal. While we have an ever ready ear to hearken to hard-luck tales, we sometimes weary with the monotony of the wind-up of all these little confidential talks.

In about every instance it is pointed out to us that we should roast this or that fellow, merely because it is alleged that he has done something out of propriety in poultrydom.

When pinned down to business, the fellow with a grievance rarely has the faith in his own case to put it over his own signature, and then he goes away with a sore feeling in his heart towards The American Fancier.

The American Fancier believes in a square deal for every fellow, so the fellow with the grievance should remember that the other fellow has his side of the story, and The American Fancier always wants to hear the other fellow's story.

The display "ad" on another page speaks of our facilities for printing for poultrymen. We can show samples of catalogue work that has made some printers look cock-eyed with envy. No commission is too large or too small for us to give you a figure on. Right printing at right prices is our motto.

Robert T. Dennis

Publishers' Announcement!

"Brown's Budget" and several other good articles are held up this week, owing to other demands on our columns. Brown's Budget will hereafter contain notes on garden and farm.

I was recently shown a hen upon which a post-mortem had been performed, and asked to say if she had been killed by over-feeding. Although fat, the egg organs were in perfect condition and showed her to be on the eve of laying regularly. I promptly said no.

This party had been reading a few cautions and noted the evils occurring to corn-fed stock, and was sure corn had killed her hen.

At this season, when nature is inviting all creation out of doors, it is absurd to think a flock of Brown Leghorns having the run of a farm and on the move every moment throughout the day, could eat corn enough to kill them.

A horse who has an abundance of flesh worked on him is not handicapped by it for the work he is in the habit of performing.

A cow will produce a greater flow of milk for a longer period when in a condition approaching the market order.

Then why should a scrawny hen be expected to lay an egg a day and her fatter sister be expected to die?

Each feeder must be his own judge as to the quantity of food his stock will consume at a profit, and increase or decrease as results demand.

Keep things clean. How often shall we clean house? I answer, when we have the opportunity and the ambition.

The village poultryman cleans because he is forced to, but us farmer henmen we know there is money in cleaning for us.

The task is lighter when performed often.

It might pay the village poultry-keeper to hunt up a florist or gardener who would buy the manure after every house cleaning.

Have practiced a new scheme in my brooders. Under each section, the floor has been covered with chaff, raising higher for newly hatched chicks. On this I laid large burlap sacks and sprinkled sand on the sacks. When cleaning I find the sack warm for the little feet, and after dumping in a measure the sack is put back and sanded as before.

The cleanings from my brooder house goes under the apple trees and I look to be repayed with an annual crop of fruit.

The muslin front to my brooder house is working fine. My chicks look like young prize fighters and already are yearning for the freedom of the orchard.

The two items on the bill of fare they most relish is stale bread, soaked soft, mornings, and a small portion of green ground bone evenings, hoppers of whole wheat and cracked corn, to which oyster shell and charcoal is added, stand before them all the time, a light feed of ground grain is given them the first thing in the morning.

Where the large fowls and neigh-

bor's cats are troublesome around the coops of newly hatched chicks a roll of inch mesh wire will soon pay for itself. I have always used the wire alone, but it is unhandy; am going to procure some discarded light wagon tires for the bottom, and after uniting the ends to complete the circle, fasten two strips, crossed, at the top for a handle, inside this I shall set my brood-coop for the first few days; think this will be first rate for bantams for two weeks at least.

Saw it exploited in an exchange, "that green cut bone was inferior to beef scrap, the bone causing the membrane of the egg to become so tough the chick could not break through." One poultryman answered that no trouble will be caused by the bone where it has to be ground by hand.

THE PIGEON FANCY IN AMERICA.

The pigeon fancy in this country is growing far more rapidly than we imagine, the past season's exhibitors verify this statement.

New names appear in the catalogue of the shows, showing indeed a very healthy state of affairs. The leading lofts have had a big demand for their stock; why, because the public have been educated principally by the press and the annual fixtures.

The Specialty Clubs have offered inducements in the way of specials, cups, etc., for the novice.

Most breeds in this country are represented by a specialty club and the popularity of these individual varieties have been through the untiring efforts of the members of that particular club. The Jacobin, Fantail, Pouter, Tumbler, Dagoon, Owl, Magpie, Oriental Frill, Carrier and Homer Clubs have all held their variety to the fore.

The competition for their specials have induced members to send abroad for the best that England produced. Their progeny are distributed among others, improving their strains.

The beginner is one who is benefited by these importations, he can generally purchase the descendants of these noted prize winners, and start with a strain produced by a specialist in that variety.

The past few years have brought some of the best Jacobins, Fantails, Pouters, Magpies and Carriers to this country.

To-day it is no unusual incident to see our American bred win over some imported Dairy, Crystal Palace winner, furthermore some of our American breeders not content to capture the blue ribbons over these imported celebrities have met their rivals on their own battle ground.

Messrs. Havemeyer Bros., the famous Fantail and Bantam breeders had the honor of winning first and the much coveted Trophy Challenge Bowl for the best Blue Fantail bred 1901.

Mr. R. F. Whitmer duplicated Messrs. Havemeyer Bros. success by winning with an American bred Black Pouter hen, first and special for the best Pouter at the Crystal Palace, London.

This is proof that at last the importations have told the tale that America can produce fancy pigeons equal, if not better than her mother country; why, because the best came to these shores and the fanciers in whose hands they fell bred better.

So it is with the beginner, if he will start right, it will place him closer to his more experienced competitor.

There is another art in pigeondom other than breeding, viz, handling and conditioning, this requires experience and with some breeds skill.

How many times the beginner is told

that he or she would have won providing the bird was in better condition. Of course, each variety requires different handling, but all show to better advantage if tame, this can only be done by caging and handling your pets, get them used to the cage, and when the judge is looking over their good qualities, they will pose instead of trying to find the top of the cage.

How many times this or that bird is passed on account of condition, hardness of feather or condition is given so many points in the standard of all varieties; right it should be as nothing adds more to the general appearance of a bird than fine, hard plumage.

Plenty of exercise, fresh water, a bath as often as possible, grit and good feed will keep most pigeons in the best of condition, providing they are properly housed. This subject we will try and take up in the next issue.

SEASONABLE HINTS.

It is very essential to have pure fresh water, before the birds at all times, two or three times a week a few drops of tincture or iron in the water will be most beneficial.

A few tobacco stems, thrown on the loft floor, will be speedily carried away for nesting material. Tobacco stems are vermin proof.

Keep mice out of the loft, they greatly disturb the birds in the nest, many times causing them to leave their eggs or desert their young.

Always use nest pans, they come in all sizes, for the different varieties, and can be had for about \$1 a dozen. They keep the eggs under the birds and many times the youngsters from being separated.

Don't be discouraged if you find the first round of eggs clear, this unfertility will in most cases be found lacking in the second round.

Eggs can be tested on the third or fourth day with certainty; if one finds them clear, and good eggs not available it is better to take their eggs away, and let them nest again.

A hen often suffers after laying the first eggs, leg weakness. This will generally disappear in a few days, and need cause no alarm, especially if a tonic be given when first noticed. Cod liver oil, which may be given in capsules is a most excellent tonic.

Give the birds a bath two or three times a week, choosing a pleasant day.

Grit is just as important as feed and should always be accessible to the birds.

A good ration for this time of the year is fifty pounds Canada peas, thirty pounds wheat, ten pounds Kaffir corn, five pounds millet and five pounds hemp seed—(One hundred pounds).

Just at present there is quite a controversy in the British Fantail Club regarding the sex of Mr. Stevenson's young white shown in the young hen class at the last Crystal Palace Show, where (he or she) won 1st, Silver Plate, two medals and Diamond Jubilee Cup for the best Fantail in the show.

It appears this bird, in the opinion of a few members of the Club, was shown in the wrong class.

According to Rule II, Challenge Trophy Rules, which reads:

"That where the sexes of the young class are divided, the sex of the bird awarded the Challenge Trophy shall be verified at the Club Show by a sub-committee of not less than three, but

if any doubt arises the exhibitor shall produce the bird in question for verification of the sex by the committee at a meeting to be held not later than January 15th, following the Show.

"If at the request of the Secretary of the Fantail Club, the bird is not produced by the before mentioned date, the exhibitor shall forfeit all right to hold the Trophy."

Mr. Geo. E. Gray, sometime after, we believe, entered a protest, but the bird in question had been sold to an American fancier. Strange to say, neither the owner nor myself can determine the sex of this bird and we anxiously await the decision of this committee.

Mr. Chas. F. Wagner, of Toronto, Canada, writes that he is breeding Fantails and Magpies, as well as Pouters, with which he was so successful last year. We understand that at a recent show he swept the boards.

We learn that Mr. Wm. Schock, the Western Fantail breeder, who was so successful at the last Boston Show with his whites and blacks, expects to show a strong team at Madison Square Garden, (Eastern Fantail Club Meet) 1907. Mr. Schock has a very strong stud in these colors, and will probably make it interesting for the veteran breeder, Mr. Alex Hay.

In looking over some of Mr. Hay's youngsters (for he has the good fortune of having quite a few) saw a few blacks carrying the largest tails we have yet seen on birds of their age, the same small round bodies, this strain is noted. Mr. Hay has paid considerable attention to his Caddles, the past few years, and has strengthened his stud by procuring new blood. This season he purchased a very fine bodied yellow hen, sister fifth N. Y., a daughter of which looks to be a strong candidate for the challenge bowl.

If Madison Square Garden can only bring Messrs. Johnson, Hay, Rowland, Havemeyer, Schock and Clements together in the black classes there will be "something doing" in Fantail alley.

Last week we had the pleasure of a visit to the home of Dr. Frederick C. Peterson, Smithtown, L. I.

The Doctor has been a fancier for quite a few years, known mostly in horse and dog circles. At the last pigeon exhibition at Madison Square Garden he became interested in the Dancing Fantail, and being a fancier he had gained by experience the way to start; purchased the best from the leading lofts, and before the breeding season started had such Fantails as 3d Palace white cock, very typical bird, grand style and action, great length of feather; white hen, daughter of 1st New York, a very small round hen, full of quality; 3d Boston black cock; 2d Boston hen; pair of imported Murray Reds.

At present these birds are housed in a section of his stable, divided as a Fantail loft, but he will shortly erect a building suitable for accommodating about 100 birds.

The Doctor has the stock and the nerve; we wish him every success.

A. M. Lockman

The number of poultry journals that have made their appearance during the last few months would be truly alarming if we were sure that they were born to continue. It is simply a case of the survival of the fittest, and The American Fancier was born too long ago to die prematurely.

Meriden Mentionings.

The Meriden Poultry, Pigeon and Pet Stock Association will hold their sixteenth annual poultry show, December 29, 1906 to January 2, 1907 inclusive, with the exception of Sunday, December 30th, on which day the show will be closed to the public. They have secured the services of Dr. W. H. Card, of Bristol, Conn.; Mr. David A. Nicholas, of Shelton, Conn.; and Mr. D. J. Lambert, of Apponaug, R. I., to judge the show, and their past reputation is a guarantee of fair treatment to all. The coming show will be a catalogue show, doing away with the old way of having exhibitor's number on the coops. Another feature that helps make the Meriden show a success is the fact that the Association has a bank account and always pays premiums on the last day of the show where possible.

Very respectfully,

W. W. STEETER.

Shirk Kicks.

Hanover, Penn.,

March 17, 1906.

Editor American Fancier:

Appropos of the article of Geo. M. Bell in the 10th inst. Fancier regarding the criticism of Buff Wyandottes at New York by a prejudiced outsider.

I also want to add my protest to the manifest unfairness, to say the least, of such criticism.

I also was an exhibitor there and accepted the judgment in my classes as being strictly honest and impartial. Then we read in same issue with the awards the criticisms of Geo. W. Weed on Silver Wyandottes, viz.: 3d hen (Beckett's) could have been placed first without much kicking from anybody; 1st pullet not the equal of 2d (Beckett's) in type and comb, and cockerel heading unplaced pen of Dr. Beckett, (nothing in sight but Beckett, he would have unhesitatingly given 1st in open class. Now, this bird was not entered in the open class and so where is the reason or fairness in unfavorably comparing the birds that in competition were awarded the ribbons, unless it is the evident and uncontrollable desire to play favorites against the winners, which are usually entitled to all they get, including an impartial write-up.

Yours very truly,

CHAS. S. SHIRK.

Three Pigeons Out of Two Eggs.

(New York Tribune, April 14.)

Orange, N. J. (Special)—Filled with a spirit of emulation by the deeds of their neighboring hens in Sussex County which lay eggs with handles on them, several pigeons belonging to Harry Beatty, a pigeon fancier of Washington, Warren County, have started in to hatch out a few wonders themselves. Recently Mr. Beatty placed two eggs under one of his homing birds. One of the eggs was somewhat large, and was evidently a double yolked one, for two birds were hatched from the egg. The twins are both active and perfectly formed. One is a trifle larger than the other.

The best method of cleaning a filthy hen house is to put ten pounds of dynamite in an empty shoe box, and place the same in the middle of the floor. Then light the fuse and retire to a safe distance. One treatment like this is usually sufficient for any ordinary hen house.

Weed's Wanderings

Well, my dear readers, I have wandered some since I last wrote you, for I am out of the United States altogether, and am up here in the King's domain. Yes, last week I crossed Suspension Bridge, receiving the usual order to open up grips and suit-cases, for the inspection of the Custom House officials.

Our destination is London, Ont., Can. We have to change cars at Hamilton, and having some three hours to wait, we take a stroll through the town.

The first thing that attracts our attention is the uniform of the police, their helmet has a strap that extends from one side down around between chin and mouth and up to the other side, what it is for I do not know; it looks as though they wanted to tie the hat on by passing the strap under the chin, but had cut it too short, and so let it hang across their face. They also wear a cape which gives them a sort of old womanish appearance.

Well, the train comes at last and we start for London in a driving snow storm. We are met at the station by that prince of fanciers, Richard Oke, whose name, I think, is known by every fancier in America.

We board a street car for his home, when another custom peculiar to the country is brought to our attention, the conductor came up with a something that resembled a square coffee pot without the spout. When he held it out in front of me I was at a loss to know whether he intended me to use it for a cuspidor or was offering me a drink. But "Dick" soon relieved me of the uncertainty by depositing a couple of tickets in a slit in the cover. Then I found out that the conductors here are not allowed to receive fares; the passengers deposit the tickets in the box and the conductor rings up just the same as in the States; it was simply another device to keep conductors honest.

We find the home of genial "Dick" a home of thoroughbreds, from himself and brother down to the canary. A parrot greets you in the morning with an inquiry after your health, the dogs wag you a cheerful good morning, the canary's give you their morning chorus, the Bantams, saucy and proud, demand their share of attention, while the "Creves," LaFleches, Javas, Cochins, and Hamburgs give you their morning greeting. The Jerseys in the barn give you a contented look, and the thoroughbred horse shows you that Mr. William Oke also has a love for pure bred stock.

I suppose there are very few fanciers in America that has been as successful in exhibiting poultry as has Richard Oke. Ribbons by the trunk full and the finest collection of Cups and Medals I ever saw together. Yes, Dick has got them in the best shows held in either country.

The next fancier we meet is no less than Wm. McNiel, too well known for comment of mine to introduce to the fanciers of America. Suffice to say that he is the same genial, sharp, and

in debate aggressive and convincing McNiel of old, and in chickens—well, ask those who have competed against him. Then to the yards of J. R. Boyce, the noted breeder of Barred and Buff Rocks. We take an ad from him for The American Fancier and feel certain that those dealing with him will be pleased with the results.

Then to one of the many banks of London to see Mr. Pringle, another Rock enthusiast. Then to the yards of H. H. Wallace and F. A. Andrews, both of whom think that White Rocks are the acme of poultrydom. We also had the pleasure of a hand-shake with J. H. Saunders and again met Lewis Sage, who has dark Brahmas that win the blue in grand shape.

In one of my home visits I take a run down through beautiful Stockbridge, in which town is located the yards of C. H. Willis. Cornish Indian Games and White Wyandottes are Mr. Willis's hobby and his winnings at the Madison Square and local shows are pretty strong proof that he has the goods. From here we take the train for Housatonic. Some half-mile south of the village is located the Rising Paper Mills. Mr. R. O. Harper, Superintendent of same, has what I consider an almost ideal farm. We find him at the mill; after a hand-shake and a little chicken talk we start for the farm, taking a short-cut and a row across the Housatonic. Mr. Harper demonstrates the fact that he can handle a boat as well as make paper. We arrive at the farm and find a herd of Jerseys that for individual merit we think hard to beat in America; their ed a deal of corn in their selection. fine, large, well-balanced udders show-saw. From the stables to the pigery, I consider as fine an animal, as I ever clean, velvetity, mellow coats, well sprung ribs, and better than all their pure bred blackness. A fine lot surely. Then to where we feel more at home; with the chickens. White Leghorns and White Plymouth Rocks are the fowls kept, and it is Mr. Harper's intention to get them up to the high standard of the rest of the stock kept. "Thou shalt not covet thy neighbor's goods," I believe are words of holy writ, but I really think I almost forgot those words when leaving this farm, for a spirit of almost envy came over me for I do like a thoroughbred.

While here we call on P. Carty and his Buff Wyandottes. The genial Pat gets the chicken fever in chunks and certainly loves good birds.

Mr. Harry Albro's Black Minorcas were looking fine and so were his Wyandottes and Bantams.

I go home fully believing that love of pure bred fowl proves a heaven sent gift to very many.

Geo W Weed

NOTICE TO CORRESPONDENTS AND ADVERTISERS.

Owing to the increasing circulation of The American Fancier, together with a corresponding demand upon our advertising columns, correspondents and advertisers are notified that all communications should reach the New York office of The American Fancier, Havemeyer Building, No. 26 Cortlandt Street, or to Ossining, N. Y., before 4:30 o'clock, P. M., on Monday of each week, in order to secure insertion in the current issue of the paper.

N. Y. S. Orpington Club.

The annual meeting of the N. Y. S. Orpington Club was held during the show at Auburn, January 20th, and Irving Crocker, of Seneca Falls, was elected President; W. H. Gifford, of Auburn, Vice-President, and Mrs. J. G. Osborne, Fabins, N. Y., Secretary-Treasurer.

The club is flourishing and feels very much complimented on the advancement made by the Orpingtons, there being 191 shown against 96 in 1905, and 35 in 1904. The club offered an elegant silver cup for best display, which was won by W. H. Gifford, on his grand display of Blacks. We hope next winter to be able to offer a cup for best display in all three varieties, Buff, Black and White. All State breeders are urgently requested to join, which they can do by sending one dollar with name and address to Mrs. J. G. Osborne, Fabins, N. Y.

White Wyandottes

(EXCLUSIVELY)

Snowdrift Strain

Our matings this year are very small, only 10 females to a pen; quite a number of them prize winners. Short backed, deep bodied, full breasted, snow white birds, that breed the kind we all like to see. Eggs from these matings \$2.00 per 15, \$5.00 per 45, and \$10.00 per 100.

For those who want eggs from exhibition matings, we have **Special Pens** made up of our very choicest birds; only 4 to 6 females to a pen. Eggs from these pens, \$3.00 per 15 straight. Some choice Cocks, Cockerels and Pullets to spare. Write to

ESTABLISHED 1888

I can furnish you anything for the show, ornamental or general utility purposes in Poultry, Pigeons, Rabbits, Cavies or Guinea Pigs, Pheasants, Guinea Fowl, Pea Fowl, Ornamental and Wild Water Fowl, Swans, Etc. Stock for sale at all times; write me your wants.

Eggs for Hatching

ONE DOLLAR FOR FIFTEEN; \$3.00 for 50; \$5.00 for 100; from good stock, each bred on a separate farm with full and unlimited range—no other fowl on each farm excepting the one breed. This means eggs are the kind you order—a big percentage of fertility and strong, healthy chicks. As to quality, none better at any price. Eggs from the following varieties: White Wyandottes; Barred, Buff and White Plymouth Rocks; White Langshans; Anconas; Rose Comb Brown, Rose Comb White and Single Comb White Leghorns; White and Black Minorcas and Brahma Bantams.

Duck eggs, \$2.00 for 11, from Colored Muscovys, Pekin and Indian Runners.

All eggs guaranteed fresh laid, true to variety ordered, a fair percentage fertile and packed in best possible manner, so they are sure to arrive in good condition.

HATCH WITH A STAR

And be certain of success. Heat, ventilation and moisture, the three great essentials to incubation, are the strong points in the Star Incubator. Its patented features to control these elements put it away ahead of all others and insure STAR HATCHES.

Catalog explains how chick drawer—contained in no other—works. Read it and you'll see why the Star outshines others. STAR INCUBATOR CO., 603 Church Street, Bound Brook, N. J.

WE WIN!

At the late Madison Square Garden Show, New York, in the S. C. Buff, Black and White Orpington classes as follows: Seven firrts, 9 seconds, 7 thirds, 4 fourths and 4 fifths, and these in the strongest classes of Orpingtons ever put together, there being 370 birds competing. We also won the most prizes of any breeder in these same classes. We have the stock and established winning breeding lines, but buying high-grade stock and eggs cannot safely be done upon the strength of the mere argument a breeder has room to advance in his advertisement. Now we want you to send for our catalogue, testimonial book and a very elaborate mating list, describing over forty different breeding yards and prices of eggs for same. Do not be fooled or misled by misadvertising, but come to the fountain head to get your start.

MODEL INCUBATORS and BROODERS

Because Model Incubators have given complete satisfaction they are having a larger sale than ever this season. Earlier customers recommend the Model on its merits. Their commendation is not bought for either cash or advertising—their money is made by rearing poultry for profit. Mr. Wm. H. Truslow of Stroudsburg, Pa., who has been hatching ducks for about fifteen years, under date of March 9, writes: "I think the best hatch I ever had from duck eggs came off last week in one of your Models." Mr. Truslow after using all leading makes now uses Model Incubators only. He has 47 No. 4's from which he averaged last season close to 1,000 ducks netting a handsome profit than most breeders make. Another large customer, the Crystal Springs Duck Farm, Oil City, Pa., last season used 33 Models and 49 of my old make which I remodeled. I have just shipped them eight more, making their capacity ninety machines. Mr. McEvoy, their manager, a successful chicken and duck breeder who undoubtedly draws the largest salary of any poultry plant manager and gets it because he makes the plant a profit payer says, "the Model is the best hatcher I can get." These men use Models only because they give the best hatches. If you raise poultry you can not afford to do otherwise. Send for catalog also copy "Eggs, Broilers and Roasters"—both free.

A chick when first hatched has little resistive power and is particularly sensitive to the slightest draught. While developing in the egg it breathes similarly to a fish by means of an outer circulatory system or allantois. Shortly before leaving the shell the lungs, previously filled with fluid, begin to dry out and inhale the air within the egg. On breaking the shell circulation in the allantois ceases and aeration of the blood depends entirely on the lungs. The change from an aquatic to the aerial state is rapid; the circulation is more or less imperfect and it is several days before it is sufficient to give the chicks any appreciable resistive force. It is at this stage so many chicks die in artificial brooding. The Model Brooder properly cares for chicks during this critical period. It gives the necessary warmth and comfort while the chick develops strength, activity and resistive force. It provides more fresh air than any other brooder and with it the chick is gradually hardened until able to bear the outdoor temperature. As a result Model Brooders successfully rear every chick entrusted to them as my customers will testify. "The brooder bought of you raised every chick put into it,"—Clifford F. Klees. "I raised two broods one of 75 the other 80 chicks in your brooder and did not lose a chick."—W. E. Rose. Ask for "Poultry Feeding for Profit" free.

NO. 648

DRAGOON BREEDING

BY R. W. CUNNINGHAM

(From Fancier's Gazette.)

It may be of interest to the would-be mealy men in the Dragoon Fancy to know that I have got a pure bred mealy Dragoon, of the correct colour, but failing in bar. It is no great shakes in type of beak, but has an excellent skull. He is bred by a lad here in Newark, and whom I gave a blue Dragoon cock to pair with a white Dragoon hen he had. The produce of this mating was a blue, a blue chequer, a red chequer, and a mealy—any colour you like, while you wait! The mealy has a ruby eye and a gipsy cere, so I am on the road, and have paired him to a mealy Antwerp (medium), exceptionally straight in face, with a fiery eye and a good gipsy cere. I am looking forward to getting some good stock from this matching. Talking of fiery eyes, where are they at the shows? Dark chestnut is now the prevailing colour, to which I should prefer bright orange. I do think that all the beauty of a Dragoon is gone if the eye is dull. Mr. Wood's criticism I am delighted with. It coincides with many Dragoon fanciers' thoughts, and still there does not seem to be enough spirit in the majority of the Dragoon Club members to enforce what they consider right, and stop these dull eyed, long feathered, unshapely Dragons winning on one point alone—shape of skull, which comes from cross breeding originally, and has carried with it ruination in respect to the color of iris! One or two men have been allowed to lead the flock to destruction! The masterpiece of Mr. R. Woods has been almost ruined, and I am glad to see he is speaking out to prevent his ideal sinking into oblivion.

Personally, I cannot understand men allowing themselves to be pushed into a back seat, when the bulk of them agree that the majority of the present winning Dragons are not of the correct type; giving absolutely to the one or two men who have the courage to enforce their opinions, all the cudos, all the glory in the eyes of the public, and all the sale for their produce. Taking all in all, and regardless of the type of birds winning at the present day, I must say the Dragoon has run off the lines, and the sooner we see the old Woods' type, with its upright carriage, fine well worked cere, and slow growing wattle, the better for the Fancy! It often amuse me to see how like men are to sheep. One man gets a craze, he has the cheek to propound his theories, and being a man of some force of character, many follow, all breed for the type he declares is correct, but he, wise fellow, had got into that type first, and so he goes on

winning so long as the sheep are working hard to get up to him. It is this changing of shepherd that has to a great extent ruined our Dragoon. Let us stick to the original, Mr. R. Woods! No man living can hold a candle to him for pigeon knowledge. He bred up to an ideal which he nearly succeeded in perfecting. What on earth are we doing backsliding? Why not try to finish his work, and insist on our judges awarding prizes to the correct winners, according to the club standard?

I, also, am not afraid to say that I should prefer an occasional change of judges, and should like to see someone outside "the little circle" judging at our great events. I would much like to see the old type of Dragons again in favour; moderate size, moderate beak, ruby eye, fine slow growing, long lasting cere and wattle, and a Dragoon to look at; not a crouching, runtish, dull eyed, heavy cered, montrosity! I have some old strain, Mr. R. Woods' Dragons, in my possession, with ceres like fine kid in texture, and they are five years old. I nearly ruined my whole stud by introducing new blood of a very different strain. Skulls I did get better, but the crouching position and general coarseness of cere, wattle and body, is a terrible eyesore!

Now skulls! If skulls are to be the leading point, as I think they should be, including the head properties as a whole, why on earth do flat skulled birds get in the money! Mr. R. Woods should have been at the Dairy show! All shapes were on view there—skulls I mean. The type of birds was the same throughout the winners.

An ordinary observer, with a fair knowledge of Dragons, often gazes in wonderment at a challenge cup Dragoon, and wondering how a bird with one or two such glaring faults should have been selected for such an honour. Perhaps the colour is wrong, or the eye dull; or the carriage crouching and feather long! Then why is it so honoured? When there are other birds better balanced all through in ideal points, but in reality not exaggerated in any. One often wonders why the judge does not see faults which every Dragoon fancier on seeing the honoured bird points out at once. I have seen a Dragoon with a flat skull, dull eye, and long feather, win at our premier show, and have seen twenty-three of the winning Dragons at one show flat in skulls, vide last year's Dairy show report. If you cannot see a flat skull, you can feel it; and if this is the greatest structural defect in a Dragoon's skull, and also a defect to avoid in the breeding loft, why is it so encouraged in the show pen?

To continue, I take up another item mentioned by Mr. Woods in his criticism. Filing the inaudible. I agree with Mr. Woods that the exaggerated filing back of the mandibles is an act of cruelty. In addition to this I consider that cutting and carving the ceres and wattles of Dragons is an unwarrantable and unmanly procedure, and should in this generation be stamped out. Cruelty is the animal passion remaining in the brutes who cut and trim their pets for the sake of winning a few prizes with them! I append the beautiful notes I have copied out of that charming paper, "The Country Side."

"To understand the lives of other animals—even if that understanding compels us to recognize that they have not our human consciousness—is to sympathise with their struggles and difficulties; and the idea of being cruel to them, should you entertain it for a moment, would show your unfitness to regard yourself as a civilized being. It would make you contemptible in your own sight. When the true knowledge of nature is universal, there will be no cruelty." Mr. Kay-Robertson also describes in the most beautiful literature that man is in the powers of evolution. The ideal man being Christ, in the likeness of his father, God. Man as he improves and approaches perfection will lose more and more of his animal passions and cruelty; and surely the lowest and most despicable form of cruelty is maiming and mutilating our pets, for the sake of fashion and monetary gain.

Let us breed for the old type that do not require cutting and faking, and then, at least, we will be progressing in our moral evolution, in addition to breeding pets on a Christian basis. In my humble opinion, if a man will fake a Dragoon's wattle or cere for the sake of a prize, he is in a sad moral state. I am glad to see M. G. S. Derriman writing on dubbing Bantams. A few prosecutions would soon change the fashion, which is barbarous, to say the least.

The Cornish Indians.

(By C. H. Yapple.)

That the Cornish Indian possesses as great a merit as any general pompous fowl is unquestioned by all who have bred them, and for broilers and roasters they are unsurpassed as any intelligent breeder of them will tell you. They will mature about three weeks before any other variety and one of the hardest breeds known, yet I have seen the question asked several times in the poultry papers, "Which is the best broiler and roaster?" The answer is invariably Rocks or Wyandottes. Now I would like to know if

these people that talk this way ever bred the Indians and Rocks and Wyandottes side by side to know the difference, or are they jealous because our English cousins augmented the breed. I fully realize that the Rocks and Wyandottes are a good fowl for I have bred them also, but in speaking of broilers we should not lose sight of the Storking.

Then again we see the question, "How are the Indians for layers?" Again the answer comes "Very poor." This answer reminds me of a prominent Judge and officer of The American Poultry Association who was scoring the birds at one of our winter shows where I was exhibiting several varieties of poultry and among them had a large exhibit of Indians and saw him looking them over and telling some onlookers that they were the poorest layers he ever saw and wondered why a man should keep such a bird, and a few moments later came to score them there happened to be some Malays in the adjoining coops and he scored the whole bunch as Indians. Now doesn't this show this party's experience as judgment of the Indians.

I do not claim the Indian will lay as many eggs as the Leghorn or Hamburg, but do lay enough to make them profitable for egg production. It is not merely the hen that lays the most eggs in a year that is the most profitable—it all depends on the season she lays them whether eggs are 12 cents a dozen or 40. There is where I claim the Indian gets in the egg business as they are good winter layers, and do not get broody until May or June, and you will not experience any trouble in breaking them up if you attend to them at once. They make remarkable good mothers.

In conclusion, I wish to give a few hints on breeding for double lacing which we have all been trying to get. The average exhibition male is a very poor specimen to breed from with the intention of getting double lacing on females; use a male with plenty of bay in breast, back and wing-bone, also hackle as the exhibition male has a tendency to breed the female too dark. If your hens are triple laced, use a male bred from a single laced female; it is a pretty good idea to keep a few single laced females in your yards; don't be afraid of too much bay as all Indians have a tendency to breed to dark instead of bay; it is much harder to breed the male for a good breeder, than the exhibition male.

One of the things we expect to see in the near future is a great Poultry Congress, made up of delegates from every county in each state in the Union.

BROWN'S BUDGET

April's smiles and tears keep the poultryman a going that has many broods out in coops. The regular poultryman, that is most of them, depend on brooder houses. There are, however, plenty of hen hatched and hen cared for broods. Keep the coops on elevated places where there will be no danger of having them inundated by sudden heavy rains.

Pinhead oatmeal is excellent for young chicks as soon as they will eat it. This should not be confounded with ordinary oatmeal for table use. Do not recommend oatmeal for real young chicks.

Barley is fed much in England, but it seems to be difficult to obtain in this country. Do the beer factories get a corner on the American crop of barley? Brewers grains are to be had at the breweries but poultry pick them over in a suspicious way and don't seem to be very fond of them.

Easter has again come and gone, and thousands of little chicks have been sold to perish by cruelty and neglect. The S. P. C. A. should get after those who offer these innocent little chirpers for sale. Saturday, I saw scores of youths carry yelping chickens in pasteboard prisons. It is a barbarous travesty on justice to allow live chicks to be sold as they are during Easter holidays. It is a method to teach cruelty to children. If they are fond of pets, give the children such that they can properly care for and make comfortable.

Don't be tempted to buy cheap incubators. It is always best and safest to buy of well known makers. A few dollars more is simply adding satisfaction in the end, as well as more hearty, properly hatched chicks. The prices now asked for incubators that are recognized to be about as perfect as it would seem possible to make them, is, indeed, very reasonable. Buy the best.

Breeding fowls should have plenty of room to run around in; should be in a condition to be active, always eager for their food. Make them scratch every day for the major portion of the day's rations.

The breeding season means a continuous hustle, and it is a time when the lazy man recognizes that the occupation is not according to his liking. The season is short and a big lot of work has to be accomplished. There can be no let up until the season is ended.

Don't condemn the male bird because he is a fighter. Such specimens show great vigor and are just the kind to head the breeding pens.

Watch your extra gallant males in the breeding pens that they do not

become weakened. It will pay to feed them extra, even if you have to do it by lantern light.

The national department of agriculture gives the following composition of the eggs of various kinds of poultry:

Hen egg—50 per cent. water, 16 per cent. protein, 36 per cent. fat.

Duck egg—46 per cent. water, 17 per cent. protein, 36 per cent. fat.

Goose egg—44 per cent. water, 19 per cent. protein, 36 per cent. fat.

Turkey egg—48 per cent. water, 18 per cent. protein, 33 per cent. fat.

Look out for the good cat now that the chirpers are around. Your good cat may be all right while home, but we have known such to visit the neighbors and feast on chickens. The only safe cat around a chicken yard where there are young chicks is one of the calico stuffed kind.

Don't condemn the man you buy eggs from, when all the trouble of poor hatches comes from a hen that does not do her duty properly. There are many cases where the trouble comes from such sources or ways.

The Dallastown, Pa., fanciers have changed the name of their association to "York County Fancier's Association," and have selected the date of November 26th to December 1st, 1906, for their next show, to be held at Dallastown, Pa. They will have a show that will be of quantity and quality both.

The "spring fever" has full possession of many city people and the suburbs are crowded with people looking for small places "just large enough to raise a few chickens on." Some of them that I heard figuring the other day were calculating every egg would hatch, and every chick would grow into a pullet, and every pullet would be laying eggs by Christmas. There's a miscalculation or sorrowful disappointment for someone coming "when the leaves begin to fall."

I hope Brother Zimmer will forgive me for making the one line quotation from a favorite song he used to sing.

G. O. BROWN.

Parkville, Md.

In feeding for egg production a valuable lesson may be learned from nature. The fowls that receive the least attention lay when eggs are the cheapest. Therefore, your efforts should be directed to making conditions as near as possible to nature. If you do not understand this item, a diagram will be furnished you free of charge.

There is money in the poultry business but it takes earnest, persistent work to get it out.

ANENT THE AMERICAN RED.

Dunellen, N. J.,
March 19, 1906.

Editor American Fancier:

Permit me to call your attention to a sentiment expressed in the letter of Dr. Wilcoxon in the last issue of The Fancier. I do not care to rush into print in answer to this kind of talk, because if these people will drop the controversy about the Reds I shall be glad to leave the subject alone, but I do not wish to have you personally misinformed, and I would like to have you take up your copy of Mr. Orr's notice of the amendments proposed for the last A. P. A. meeting and see what is the nature of the amendments which this man designates as the "Baerman Amendments."

The amendments to which he refers particularly are the ones relating to weights and colors. My proposed amendment increased the weight of hen to seven pounds and that of pullet to six pounds, but there are too many Red people who want to sell for breeders any little runt that happened to live and they stand together for a weight that will make the Reds despised inside of five years. These are the men who petitioned Dr. Wilcoxon to cast his several votes at Cincinnati against the proposed increase in weights, not because the smaller birds were better layers, but because they are more easily raised. The country is not looking for another small breed of layers, but there is a good field for a large breed that will lay eggs. None of the good shaped and handsome Reds that have been shown are anywhere near down to standard weight. Then take the subject of color. I proposed two amendments regarding undercolor. First, I did not see why a standard should say, "other things being equal, the bird with the best undercolor shall win." Why should we not say the bird best in surface color must win, other things being equal? That provision regarding undercolor seems to me foolishness, because a judge who knew his business would give effect to that provision in any case, but it also has its baleful influence on the judges who do not study the standard thoughtfully. I have seen a judge pick up a splendid bird, and, because, as I suppose, remembering this statement about undercolor, and, finding a little dark barring, throw the bird aside in favor of one good in undercolor, but worthless in other respects.

My other proposed amendment regarding undercolor was simply an effort to get a definite statement. The standard read "red or salmon," and I proposed the one term "reddish buff." I tried in this, as in all I have done about a standard for the Reds, to get a definite requirement, without an alternative, but the other Red fellows were true to their record and, therefore, strove for the alternative feature.

You have handled enough Reds to know that the undercolor of ninety-five per cent. is from a light buff to a deep reddish buff, and that any bird with a salmon undercolor will have a surface color that is very unusual. If they had used the word "red," and then attempted to breed to it, I would have had nothing to say.

I proposed one other amendment regarding color that proved unnecessary on account of the action of the Revision Committee in eliminating the alternative regarding black in the

hackle. I strove for something definite in this respect also, because I did not believe that it was conducive to the production of a high-class fancy bird to give men the option of breeding these birds either with or without black in the neck feathers. Had the Revision Committee not taken this matter into its own hands, I have every reason to believe that this same bunch of fanciers would have stood as solidly against this proposed amendment of mine as against the ones which Dr. Wilcoxon mentions in his evident attempt to decry and belittle the man who has worked as no other man has worked to secure a definite standard for these birds and make them respected, even when he has seen that his course was causing serious financial loss to himself.

Dr. Wilcoxon uses the expression "despite his convictions," and I have to say that I fail to see any very definite convictions on the part of Dr. Wilcoxon. In Cincinnati he came to me and offered to join the American Red Club and suggested that I join the Single Comb Club, and now he is writing slurring stuff about my deserving well, "notwithstanding my (his) former endeavors," and at Cincinnati he seemed to have no policy but to hang to the coat-tails of the old club and kneel abjectly to its leaders. Others wanted me to join the Boston Club, which I would not join for any advantage the whole world could offer, because it stands for things I do not believe in.

Of course I am writing this for yourself alone, but if the occasion should make it advisable I would not hesitate to tell it to the world.

It is disgusting for Dr. Wilcoxon, or any other man, after what I did in the interest of harmony in the A. P. A., knowing how I have worked for the Reds, to speak in this nasty way of the "Baerman amendments," as though the Reds had been saved from a threatened destruction by the defeat of these proposed amendments—not having the grace to give even a decent idea of what the proposed amendments were, so that his readers could judge how much they were calculated to injure the breed. It is very apparent that care is taken not to give any clue to the real nature of these amendments, and that is in accordance with the general treatment I have received since I began the American Red movement.

Yours very truly,
F. D. BAERMAN.

The custom of exchanging butter, eggs, poultry, etc., for groceries is an extravagant one. The farmer is obliged to pay the groceryman's prices for everything he gets and to receive the prices he sets on the farm products. It is a much better plan to have regular cash customers for such products, as the cash will secure better bargains at the grocery or store than exchanging products for goods will.

In Mexico a gold mine has just been sold for \$150,000 for the discovery of which chickens are entitled to full credit. A few months ago the value of the property was unsuspected, but one day the employes of Albert Palos, a merchant of Tapalpa, found grains of gold in the crops of his fowls and immediately took steps to acquire the land where the birds roamed.

Agriculture OR Field & Garden

Seasonable Hints.

Variety in the garden means health to the family. Cut out last year's canes from the raspberry and blackberry bushes. Be liberal with barn manure around the bushes. It is a good plan to dig up, or rather loosen the soil with a manure fork close up around the vines or bushes of small fruits. Cane fruits are benefited by mulching after the manure spreading and the season is advanced—when berries commence to form. Corn, beans, peas, lettuce and many other vegetables can be planted at intervals so to have a constant succession of choice things. It pays to give very thorough preparation to the soil for all crops. Yield and quality is greatly increased when such methods are followed. There are always certain fruits and vegetables that thrive better in some sections than others. It is, therefore, always well to find out the kinds that do best in your neighborhood.

Don't put all the labor on the home garden, but lend the women a helping hand among their flower gardens. Cheerful surroundings bring happy hearts, and inviting home surroundings make lasting and pleasant impressions. Arrange in flower planting so to have something out in bloom all the time. A little study will enable you to do it. There is a chance to test your artistic ability in arranging the flower beds for beautiful color effects. The distribution of foliage plants on the lawn can be so managed as to form pleasing, effective contrasts. Don't be premature in putting out the plants. May is always uncertain about settled warm weather until well near the middle of the month. Because the grass and grain and trees and shrubbery are luxuriantly thriving is no sign the warm ground conditions exists which are so necessary for flowers and vegetables. Better be a little late than too early with the flower planting—it will save doing the work over again at additional cost.

In selecting strawberries for the home garden, as well as other small fruits, consider flavor more than the shipping quality. The kinds that won't stand transportation are the richest in flavor—too tender to ship. They are the ideal kinds for the home garden.

There are so many climbing or running plants, that there is no excuse for unsightly premises or outbuildings. Many of these plants are highly ornamental and also produce crops of beauty and value. Grape vines once established in desirable locations may each year produce much valuable fruit. Where quick results are desired, the gourd family, with its greatly varied unique products offer especial opportunities.

Window boxes, where garden space is limited in some sections of the country—small cottage towns—has become quite a feature. These window boxes are especially suitable for growing the beautiful Japanese Morning Glories, Nasturiums, Wild Cucumber, Asparagus, Sperengeri, etc., and rich foliage plants such as Coleus and other variegated leaf plants. The woman who

Some fine Buff Cochins and White Cochins Bantams, owned by E. J. W. Dietz, Secretary White's Class Advertising Co., Caxton Building, Chicago, Ill. These birds were photographed and photo retouched by Mr. A. O. Schilling, poultry artist in the employ of above named company. It is the practical knowledge gained by having thorough poultry fanciers and artists in their employ that has brought to White's Class Advertising Co., so many poultry advertising customers.

loves flowers should be encouraged, the nearer one gets to nature the nearer they are to nature's God.

Wood ashes are valuable for many crops and a little mixed in the soil for flowers will be beneficial. Digging up the top soil of potted plants and working in a little ashes will be very beneficial to many plants.

The orchard men's cry now is let us spray.

The birds are the farmers friends; protect them. Build accommodations for them. They will aid you in keeping in check insect depredators.

Don't forget to give the hedge plants around the lawn a good coating of well-rotted barnyard manure. It will reach down to the roots. If you have wood ashes they are especially good for the purpose.

Hot beds will have to be now watched carefully or the plants will be destroyed. For spring covering of hot-beds some gardeners now are using oiled muslin instead of glass. The muslin is tacked on frames fitting the sash places. The muslin screens can be prepared by stretching the muslin tightly on the screens and on both sides saturate the muslin with boiled linseed oil, using a broad brush to spread evenly.

Mulching the strawberry rows keeps down the weeds and conserves the moisture in the soil and keeps the grit from getting on the berries. A little tobacco dust scattered around each strawberry hill will serve as a fertilizer and help kill the troublesome white grub that is so destructive to the plants.

In setting out fruit trees as far as possible spread out the roots as far as possible as they naturally grow. Avoid cramping them. Cut off all broken or bruised parts using a sharp knife. Always cut back the long shoots at the top of the trees when setting them out.

G. O. BROWN.

Balanced Rations.

1. For light milking common cows: Fodder corn 15 pounds, oat straw 8 pounds, corn 3 pounds, oats 5 pounds, and gluten-feed 2 pounds.

2. For cows giving 11 to 12 quarts of milk daily: Corn silage 40 pounds, clover hay 10 pounds, corn 4 pounds, and oats 5 pounds.

3. For cows giving 12 to 13 quarts of milk daily: Corn silage 40 pounds, timothy hay 10 pounds, corn 4 pounds, bran 3 pounds, and oil-meal 2 pounds.

4. For cows giving 15 to 17 quarts of milk daily: Timothy hay 15 pounds, stover 8 pounds, corn 3 pounds, bran or oats 4 pounds, gluten-feed 1 pound, and cottonseed meal 2 pounds.

Do not expect to learn about the air cell the first hatch. You will learn that later.

When the chicks seem to be putting up a continuous crying performance, it means that they are not warm. Never let the brooder become cold.

Weed's Wanderings

We leave London for Toronto with feelings of regret, for the places where you find such men as McNeal, Oke and Saunders are few and far between. Arriving at Toronto we find the Wheat Sheaf Hotel, where Mine Host Wm. Hammall, of Game Bantam fame, gives us a hearty welcome. The next morning we start for Wm. Barber's, and find that William is a storekeeper, after hearty greetings with this old friend, we are shown the Games and Game Bantams, and we can truthfully say that we never saw so many birds in so small a space, and yet all in the best of health and pink of condition. Mr. Barber is certainly a past master in the art of raising and exhibiting Games, either large or small.

We make arrangements to visit Mr. Hammall's farm the next day and here we see what would gladden the eye of any fancier. Pigeons and Bantams fit to be shown; yes, and win, too, in any company. There is hardly a day that Mr. Hammall does not steal away from the busy cares of hotel and city life and come out here to the farm to fondle and pet some choice Bantam, dog or colt; each and all pure bred. After a supper served in the farm house we return to the city, feeling that we have, perhaps, seen the finest collection of Game Bantams in America.

At Mr. Barber's we have the pleasure of a handshake with Mr. J. N. O'Neil, of White Minorca fame, who gladly renews his subscription to The American Fancier. We then visit the bird store of G. Hope & Son and see a beautiful collection of birds, parrots, etc. Then to the office of Canadian Review where we meet and have an enjoyable talk with the editor, Mr. Donovan.

At the hotel that evening we are met by Wm. Fox, who is celebrating his 60th birthday. We have not seen William since the Pan-American so we have a long talk of old time and new and are invited up to see his stock the next morning.

The description of the place will fall far short of impressing you as a sight of it would. Please imagine several lofts or large rooms with cages, tier upon tier, on all sides; in each of these from one to one dozen Cavies, with hundreds running over the floor under your feet; a collection of all colors, from solid white to solid black, and all between the two—well, to cut a long story short, it was certainly the largest collection of pet stock in America.

Geo W Weed

Hen Lays Two Eggs a Day.

Hampton, April 16.—A Connecticut hen is striving to outdo the New Jersey birds that lay eggs with handles. She is owned by Robert Clark, of this place, and on several days during the last two weeks has laid two eggs a day, one in the morning and the other at night. The eggs are of good size and well formed. As Mr. Clark's eleven other hens are laying, he gets thirteen eggs some days.

Shull's Saunterings

The first to hold out the hand of good fellowship, and give me an "ad" for the old standby, The American Fancier, was that all round good fellow and fancier, Charles Eisselman, of Johnstown, N. Y., who is a breeder of White, Golden and Silver Laced Wyandottes. His winnings at the great Gloversville show prove that he is a premier at the business, as he took 1st and 2d on hen, on Silvers, and 1st and Special for best White Cock bird in the show. Mr. Eisselman had his original stock from J. J. Jacobrey, which means that his stock is first-class. Those desiring eggs for hatching can be sure of honest treatment at the hands of Mr. Eisselman. He has a very large grass run, with a southern exposure, which helps materially in fertilizing the eggs.

At his farm, five miles from Frankfort, N. Y., is situated the plant of Arthur G. Bouck, breeder of that old, tried and true American variety, Buff Plymouth Rocks. His facilities for breeding and rearing are perfectly adequate for the large business that he conducts, his houses being situated in the orchard and chickens are allowed the run of the farm. Mr. Bouck has eleven pens of this grand variety mated up for the best results, six for pullet breeding and five for cockerels. Mr. Bouck is a young and very enthusiastic fancier, and has been breeding Barred Rocks for a number of years, so he knows how to do the trick. He won 3d and 4th cock, 1st and 3d hen, 4th pullet, 4th cockerel, and 1st pen at Gloversville; and 1st, 2d and 4th cock, 1st, 2d, 4th and 5th hen, 2d, 4th and 5th cockerel, and 3d pullet, 3d and 4th young pen, 1st and 2d old pen, and the Association Cup for the best display of any one variety in the American class at the Auburn show. First pen old, 1st young, 1st and 3d cock, 2d and 3d hen, 3d and 5th cockerel, 3 pullet at Schenectady. Mr. Bouck brought out almost an entirely new lot of birds at Frankfort, but he took awards on 1st, 2d and 5th cock, 1st and 2d hen, 1st, 2d, 3d and 5th cockerel, 1st and 2d pullet, 1st, 2d, 3d and 4th old pen, 1st, 2d and 4th pen young, and the twenty-five dollar special for best pen, besides the special for the best pen old in show, special best bird American class, together with several minor awards.

At the home of F. G. Boquet, at Owego, we saw some of the best B. B. Red and Red Pyle Games we have looked at in a long while. They were great in reach, style and color, and almost perfect, just the birds that the most fastidious would delight in.

I met Burt Osborn, at Greene, he being an old-time chicken crank, who is well known to the boys who go the circuit. Burt has a lot of good birds, and had about three hundred chicks out very early in the spring. He reports trade excellent and will try and keep the boys busy the coming season.

E. H. Nolton, another Greene fancier and breeder is interested in three or

four different varieties. L. E. St. John, also of Greene, is a breeder of long standing. His varieties include about all in the category of Leghorns.

J. B. Foster is a young man at Norwich, but he is a fancier of the right sort, and has some very nice Buff Orpingtons, Partridge Cochins and Light Brahma Bants. He has shown his birds twice and done nicely. At Auburn he won on Partridge Cochins, 1st and 2d cockerel, 1st and 2d hen; Orpingtons, 3d cock, 2d hen; and at Frankfort he did himself proud and won everything in sight in the classes in which he entered.

William Lull, of Norwich, formerly of Greene, has a large string of birds, which were all looking well when I saw them. He goes on the circuit in the fall, and generally has something up his sleeve to keep the boys guessing. Bill was laid by the heels when I saw him through stepping on a rusty nail, but he says that can't kill him, and he expects to make the boys hustle when the leaves begin to tumble from the boughs and branches.

I had a chat with several fanciers at Sherburne, foremost among whom was Fred Simmons, the tonsorial artist. He is raising a great many chicks for his own use, besides selling newly hatched chicks.

Sidney Stoller is a comparatively new aspirant for honors in the show room, having his plant at Johnstown, N. Y. He has some very nice birds, and for the past two years has won his full share of honors at such shows as Schenectady, Albany and Gloversville, where he has defeated many of the old timers and carried away the honors.

While at Ithaca, I, of course, had to call and see Dennis Shea, at the E. C. Wyckoff plant. The genial Dennis being at home, I was shown around the place in good style. Mr. Shea informed me that they have sold nearly everything for sale about the place until after the breeding season, with the exception of a few male birds. I don't mean to be understood that they have sold themselves short by any means, as they have a cracking good lot of birds to breed from, and, if they cannot produce something out of the usual when another show season opens it will be very much of a surprise to yours truly.

I called at the office and saw Mr. Wyckoff, who is a very pleasant gentleman to meet. He announced everything on the boom in the incubator and brooder plant, and will remember The American Fancier when the fall advertising is due.

Who ever goes to Cortland and wishes to look up the poultry cranks, must, of course, go to see the old time sport and Game and Game Bantam crank, Billy Greenman. I found Mr. William J. looking as fine as silk, and smiling as a peach. He reports everything booming in his line, and hopes to have something to show the boys

this fall. Long life to Billy, and were there more like him!

Robert D. McMillan, a breeder of Black Minorcas, reported business good when I called upon him. His birds are large and good layers, and can be relied upon to win their share in most company.

S. P. Buckley, another Cortland breeder of Barred Rocks, is one who shows his birds, and can win in good company, as his winnings at several good shows attest. His birds are of good size and barred to the skin, and as layers none are better.

Dr. Santee is another poultry breeding crank, and is always pleased to meet a brother crank. He says that everything is coming gloriously and augurs a prosperous year.

Irving D. Rice, the well known and popular breeder of S. C. White Leghorns, whose plant is very nicely situated a mile and a half from Cortland, is a breeder who has shown his birds at Madison Square and other large shows, and is generally counted among the winners of the blue. He has a stock of between three and four hundred birds.

Lewis Harington, a White Rock breeder, can show something pretty nice in his line, and has had a very successful season.

Glen Wilson, who is also a White Rock breeder, has enjoyed a very brisk season, disposing of nearly everything he has, with egg trade good.

A. W. McNett, breeder of White Rocks, is a beginner who has a lot of very fine birds, and is going to get after the boys and make them do some hustling.

James Forsyth is a chicken crank at Owego. He has one of the very best locations it has ever been my good luck to see. It is an ideal place on sloping ground, surrounded by high grounds and woods. The location is protected from the winds and storms, so essential to a good poultryman. The place was originally four or five farms, upon which he has erected one of the largest and best equipped barns one can find anywhere. Here he has housed his famous stock of prize winning Guernsey cattle, and has a modern, up-to-date poultry house, put up so as to enlarge at either end as occasion demands. One could not do better if he made the situation to order. There are several tenant houses on the place and by placing them in different places, Mr. Forsyth has plenty of room to breed and raise the thousands of standardbred poultry he does every season. To begin to give a description of all the good birds I saw would be next to impossible, as they are legion. They are now breeding at this plant, R. C. and S. C. Brown, and R. C. White Leghorns, White and Buff Rocks, White Wyandottes and Houdans. I don't know whether I have left out any of the varieties or not, as I saw so many. They were all a cracking good lot all the way through. What especially took our eye was a pen of Houdans, one of the best I have ever seen, all large, of good color and shape. I envied Mr. Forsyth and wished that I was the owner.

JOSEPH L. SHULL.

DATES CLAIMED.

Under this heading there will appear each week a list of all the shows claiming dates for the coming season. Secretaries of poultry, pigeon and pet stock exhibitions will confer a favor by sending in the dates selected as promptly as possible. It is not only a convenience and guide to secretaries of shows that have not selected their dates, but of great interest to readers of The American Fancier, a majority of whom are exhibitors.

The name of secretary and judges will be appreciated when sending in notices.

Aug. 21-24—Cortlandt, N. Y. Cortlandt County Agricultural Society, W. J. Greenman, Secretary.

October 2-5, Chatham, N. Y. Columbia County Agricultural Society, W. A. Dardess, Secretary.

Nov. 12-17—Houston, Tex., Hewey S. Fox, Jr., Secretary.

Nov. 12-17, San Jose, Cal. Santa Clara Valley Poultry and Pet Stock Association, E. Van Every, Secretary, Edenvale, Cal.

Nov. 21-23, West Haven, Conn. D. A. Nichols, D. J. Lambert, W. R. Graves, Judges; E. J. Crawford, Secretary.

Nov. 27-Dec. 1, York, Pa. C. T. Cornman, William G. Minich, Judges; J. N. Lovett, Secretary.

Dec. 3-9, San Francisco, Cal. California Poultry Association, J. C. Williams, Secretary, Fruitvale, Cal.

Dec. 4-7, Philmont, N. Y. D. A. Nichols, Judge; G. J. Anderson, Secretary.

Dec. 4-8—Youngstown, O., H. J. Cossler, Secretary.

Dec. 4-8—Wilkes Barre, Pa., David T. Miller, Secretary.

Dec. 4-8—Providence, R. I., Rhode Island Poultry Association, W. I. Brown, Secretary, 6 Exchange Place.

Dec. 5-8, Grand Rapids, Wis. Grand Rapids Poultry Association; B. G. Eggert, Secretary; Frank Heck, Judge.

Dec. 5-8, Paterson, N. J. Paterson Poultry, Pigeon and Pet Stock Association; Charles Frost, Secretary.

Dec. 5-8, Danbury, Conn. Western Connecticut Poultry Association, Charles H. Brundage, Secretary; Judges, J. H. Drenstedt, T. F. McGrew, Hon. David Nichols and W. H. Card.

Dec. 6-9—Danbury, Conn., C. H. Brundage, Secretary.

Dec. 11-14, Lewistown, Mo. Lewistown Poultry Association; A. O. Brooking, Secretary, La Belle, Mo.; Frank Heck, Judge.

Dec. 11-14, Winsted, Conn. F. D. Hallet, Secretary.

Dec. 12-14—Kingston, N. Y., F. E. Miller, Secretary, Rifton, N. Y.

Dec. 12-15—Corsicana, Tex., W. E. Elliott, Secretary, Box 281.

Dec. 12-15, Fresno, Cal. Fresno Poultry, Pigeon and Pet Stock Association, George R. Andrews, Secretary.

Dec. 12-15, Stoughton, Wis. Stoughton Poultry Association; Sylvanus Ames, Secretary; Frank Heck, Judge.

Dec. 12-15, St. Mary's, Ohio. Wick Hathaway, Judge; F. F. Aschbacher, Secretary.

Dec. 18-21, Geneva, Ohio. R. H. Munger, Secretary.

Dec. 19-22, Holland, Mich. Holland Poultry and Pet Stock Association; L. S. Sprietsma, Secretary; Frank Heck, Judge.

Dec. 19-22, Mohnsville, Pa. Wyomissing Poultry Association; George W. Hatt, Secretary, Mohn's Store, Pa.; Charles T. Cornman, Judge.

Jan. 7-11, Aurora, Ill. Aurora Poultry Association; Walter M. Smith, Secretary; Frank Heck, Judge.

Jan. 8-10, Lenox, Mass. Honest "Dave" and Shaylor, Judges; L. H. Peters, Secretary.

Jan. 8-11, Middletown, Conn. Middlesex County Poultry, Pigeon and Pet Stock Association; Arthur L. Clark, Secretary.

Jan. 8-11, Middletown, Conn. Graves and Bunnell, Judges; Arthur L. Clark, Secretary.

Jan. 9-12, Alameda, Cal. Alameda County Poultry Association, C. G. Hinds, Secretary.

Jan. 9-13, Chilton, Wis. Chilton Poultry and Pet Stock Association; A. Stransky, Secretary; Frank Heck, Judge.

Jan. 15-19, 1907—Kansas City, Mo., P. H. DeFree, Secretary.

Jan. 15-19—Angola, Ind., Tri-State P. and P. S. Association, W. K. Sheffer, Secretary.

Jan. 16-20, Charlotte, N. C. Charlotte Poultry Association; W. B. Alexander, Secretary.

Jan. 28-Feb. 2, Cleveland, Ohio. Cleveland Fancier's Club Co.; F. L. Gruchl, Secretary; 1922 Woodland Ave.

Jan. 30-Feb. 2—St. Albans, Vt., C. O. Barrett, Secretary.

Feb. 5-9, Hudson, Mich. Southern Michigan Poultry Association; Ed. R. West, Secretary; Frank Heck, Judge.

It has been demonstrated that chickens can be taught to come off the perch and eat by lamplight, but is just as well not to introduce the late supper idea into your flock.

The Polish Fowl

BY A BREEDER

(Pigeons and Poultry, England.)

One point strongly in favour of Polish as a variety for beginners is that only one breeding pen is required, that is to say, exhibition cockerels and pullets can be bred from one pen. To prove the markings, breed from the very best marked birds that can be obtained. See that the lacing is a sharply cut, sound coloured black, and that it runs well round the feather. If possible breed from birds rather too heavily laced. If lightly laced birds are used to breed from, there is a danger of their progeny being imperfectly laced, that is to say, the ground colour will run into the black up to the edge of the feather.

One immense advantage which Polish possess over many other breeds is that they actually improve in markings with each successive moult. Hamburgs can usually only be shown for one season, and Minorcas, Leghorns, etc., are rarely of use for showing after they are two years old. But Polish, if properly attended to, can be exhibited for several years. Their chief defect as old birds, is the gradual appearance of white feathers in the crest.

White crested black, and white crested blue Polish are most handsome fowls. Their general characteristics are exactly the same. They differ only in color. The crest in both varieties is pure white. In white crested black the body colour is a rich metallic black, and in the white crested blue, it is a very dark blue, except that they have long red wattles, these two varieties have all the other points as in the spangled varieties. Here again only one pen is necessary to produce both cockerels and pullets for exhibition. It is far easier, too, to select the breeding stock, as there are no markings to look after. Provided the birds are satisfactory in shape, size, and colour, the lover of huge crests can indulge in his fancy without the risk of losing any valuable points. If really good crested pullets are mated with a first-class cockerel, the crests of both cockerels and pullets could be all that could be desired.

I am afraid I have exhausted my stock of superlatives in dealing with the other varieties of Polish, but none of them adequately describes the perfection of markings seen in a really good specimen of the chamios or buff laced Polish. This variety is far nearer the standard of perfection in markings than gold or silver spangled ever were. Its markings are exactly the same as in the gold or silver spangled, but are much sharper and better defined in every respect. In colour they are a rich buff, with the feathers laced with white. The crest is laced in the hen, but solid buff coloured in the cock. The hen is of a uniform shade of orange buff throughout, but the saddle and hackle

of the cock are a much deeper hue than the rest of the plumage.

One breeding pen only is required. The cock must be of a good sound colour. If he is a little darker than is necessary, so much the better. Lacing is of the utmost importance in both cocks and hens. The sharply defined narrow lacing is the type to be selected. If the lacing be too wide, the overlapping of the feathers gives the bird an unevenly marked appearance, and the breast of the bird will look white, just as the breast of an untrained silver spangled Hamburg hen generally looks nearly black. In both the cock and the hens the crests should be as large as possible, but a well laced bird should always be chosen for breeding before one body laced but possessing an unusually large crest. Many other varieties of Polish have been recorded, amongst them such beautiful birds as white, black, black crested white, and ermine. As these varieties do not now exist in this country to the best of my knowledge (should any be in existence here, I should be very glad to be informed of it), I will not occupy further space by describing them.

Polish have been credited with being a delicate breed of fowls. I have dealt rather fully with the question of delicate breeds when writing about Black Spanish. Properly kept, Polish are as hardy as most other breeds. Avoid cold, damp, and draughts, and any breed living can be kept healthy and hardy in this England of ours. Yes, and they can be given as much fresh air as it is possible to give them, too. It is very necessary to keep Polish out of the wet, their big crests retain a large amount of moisture if allowed to get thoroughly wet, and the birds rapidly take cold and die if much exposed. On the whole, Polish thrive best in confinement, especially if one can give them a large covered run. I am personally very much against small grass runs for fowls. A large covered in run with a floor of natural earth gives more satisfactory results. Grass runs soon become tainted, and only become fit for use again after a somewhat prolonged rest. When an earth run becomes tainted, all that is required is to remove six or eight inches off the top and substitute a load (or more, according to the size of the run) of fresh earth, or, better still, good gravel. I have always found that my fowls dearly love to scrape amongst fresh gravel.

Polish are very good layers of really good sized white eggs. Unfortunately they do not lay best at the time when eggs are most wanted, and they cannot as a rule be called good winter layers. This is not altogether a drawback from a Fancy point of view, as they lay most of their eggs when they are required for incubation. I am firmly convinced that if kept dry in the manner advised above, and fed intelligent-

ly with a view to increased egg production, they are better winter layers than many of the much vaunted utility breeds. They are good table fowls, the flesh being juicy and tender. In this respect they are superior to Black Spanish, the flesh of this variety being somewhat hard and dry compared to Polish.

It will readily understood that owing to their crests, the birds require special drinking vessels. These should be of the fountain form, with a very small opening, so as to prevent the birds wetting the bottom of their crests. Open drinking vessels should on no account be used, as the birds will speedily get their crests wet, and the usual colds will follow.

During the breeding season it is very necessary to either tie up, or cut the feathers of the crests of Polish cocks in order to ensure fertile eggs. On the whole I think it best to cut off the crests of both cocks and hens during the breeding season. This puts an end to all chance of exhibiting the birds till after they moult, but the true fancier hardly ever wants to exhibit his birds whilst breeding operations are in progress.

It is necessary to keep the birds apart from the first signs of their crests moulting. If kept together, on the first signs of the appearance of the new quills the hens will start pecking at the crest of the cock, soon reducing his head to a mass of blood and feathers. This means good-bye to any chance of showing him for that season. The hens will also peck at each other's crests if kept together, and it is by far the safest plan to pen each bird up separately for a few weeks whilst their crests moult.

To sum up, Polish have few disadvantages. The two chief ones are that they are not usually good winter layers, and that there is no separate classification for them. The first of these points can easily be remedied as indicated above. To the second I would reply that Polish, well shown, always stand an excellent chance in the any other variety class provided at every show. Their advantages are very numerous. They are splendid layers during the breeding season when a fancier is most in want of eggs. They are a nice egg, are handsome and striking fowls, and are always much admired by visitors. They do very well in confinement. Only one breeding pen is necessary to produce both cockerels and pullets fit for exhibition. This is a great advantage to the small breeder with a small purse and a limited amount of space at his disposal. And lastly, the birds actually improve with age both from an exhibition and breeding point of view. Old birds produce larger crested chickens as a rule than do young birds.

With all these advantages it seems strange that Polish should be almost as rarely seen in the show pen as Black Spanish. These breeds have been neglected very much in the past. They have been so rarely mentioned in the Fancy press that the younger generation of fanciers have hardly been made aware of their existence. To all young fanciers who want a breed that is both useful and ornamental and that will try to the utmost their skill as breeders if they wish to produce a standard bird, I recommend one of the varieties of Polish. Who will give the breed a helping hand?

THAT EGG AGAIN.

When I learned that Editor Drevenstedt had found the dwarfed egg, which I sent him, I was agreeably surprised and at once concluded that he had eaten Egg-o-See for breakfast. I felt as though I was making an unusually valuable contribution to poultry science but the whole thing seemed to strike a yellow streak in his make-up and resulted in that decidedly pungent editorial.

My position is similar to that of the man who stood, with his finger in his mouth, in front of a restaurant in Philadelphia where there were three big turtles displayed.

He was poking about with his other hand, first at one end of one of the turtles then at the other. "Here," said the proprietor of the restaurant, "keep away from there or you'll get hurt!"

"Hurt?" said the man, taking his finger from his mouth and looking at it ruefully, "I've been hurt already, but I am now trying to find out which is the head and which is the tail of this animal, so I can tell whether I have been bitten or stung."

The editor knows full well that the high price of grain prevents liberality in feeding, but I have always allowed my hens to use their own judgment in determining the size of their eggs.

In this case, as I could assign no positive reason for the abortive egg, I at once decided that Mr. Drev. could qualify as an expert after having solved the "Ginseng Problem," although in justice to him, I might have added in the accompanying letter that I had been giving Red Raven Splits quite freely at that time for center-toe feathering.

I want, right here, to mention the successful egg-experiment of a fellow-townsmen, John Tallinger. Mr. Tallinger isolated one of his S. C. Partridge Wyandottes and fed her exclusively on peach-pits and beef-juice for two weeks. At the end of that period she layed an egg with the yolk outside the shell and has since produced several of the same kind. Mr. T. is quite proud of his success and will shortly build up a strain that will put a quietus on the storage-egg business.

R. J. RULIFFSON.

Rochester, N. Y.

Seed Potatoes.

At the New York Agricultural Experiment Station at Cornell University tests have been made of seed potatoes cut into pieces of two different sizes, the pieces use on certain plat being twice as large as those on others. The smaller pieces were as large as those frequently planted by farmers. As compared with the larger pieces the smaller pieces yielded less by from 21 to 41 per cent.

This agrees with other tests. The larger preponderance of evidence furnished by tests is to the effect that it pays to use large pieces of seed.

The effective dusting of cut tubers with plaster, one or two days before planting, was studied by the New York Station. In three out of five tests the increase in yield ranged from thirteen to twenty-six bushels per acre on the plats planted with the dusted seed. In the two other tests the results were inconclusive.

Keep plenty of scratching material on the floor and your flock will sing a merry song and fill the egg basket.

A Weekly Journal Devoted to Standardbred Stock.

Application made for second-class rates at the Post Office at Ossining, N. Y.

J. H. DREVENSTEDT, Editor.

SUBSCRIPTIONS.

Subscription, \$1.00 per year.
Foreign subscription, \$1.50 per year.
All subscriptions payable in advance.

NOTICE TO SUBSCRIBERS.

Subscribers will be notified when their subscription expires. If a subscriber wishes his subscription to the paper to be continued he must so notify this office and send the amount in payment for the same, otherwise the subscription will be discontinued.

IMPORTANT NOTICE.

All matter, advertising or otherwise, must reach The American Fancier, Ossining, N. Y., or 26 Cortlandt Street, New York City, not later than Monday afternoon of the week in which the same is to appear.

ADVERTISING.

The advertising rate in The American Fancier is fifty cents per inch for each insertion. Five per cent. discount for payment in advance for six months insertions, and ten per cent. for payment in advance for one year's insertion.

CLASSIFIED AD RATES.

Forty-two words or less one time fifty cents; three times, \$1.00; thirteen times, \$4.00; twenty-six times, \$6.00; fifty-two times, \$12.00. Additional words at the rate of two cents each for one insertion, or one cent each for each insertion when run thirteen times. PAYABLE IN ADVANCE.

We clip the following from the American Stock-keeper:

"We understand that many were induced to vote for Auburn, N. Y., as the meeting place for the American Poultry Association, on account of there being an agricultural college there having a special poultry department, and this college took the matter up and wrote to the members of the executive committee that, if the meeting was held at Auburn, they would expend \$200 or \$300 to engage speakers to address the meeting on the different branches of poultry raising."

Editor Atherton is in error regarding the location of the college. The latter is at Ithaca, New York, and is a part of Cornell University, the special poultry department being in charge of Professor James E. Rice, who is also a member of the Executive Committee of the American Poultry Association, and consequently has a vote in locating the meeting. The Cornell powers that be worked hard for Auburn, sending out letters to members of the Executive Committee setting forth the advantages of holding a meeting there. The New York State Farmers' Institute did considerable plugging for Auburn, Chief Dawley being the live wire. Deacon "Tom" Orr, the Hon. Secretary, is a pretty warm friend of the poultry lecturing advocates in New York State, he as well as T. F. McGrew, Dr. Santee, Henry Trofford and a few others furnishing most of the intellectual chicken food at these farmer's and poultrymen's institutes. It is not passing strange then that they, lecturers, directors and other interested parties, barring a few,

should pull hardest for a place that offers the best financial inducements. That is one element that helped Auburn, and our erudite friend in Boston, Bro. Atherton, is about right on that point.

We believe the editor of another poultry journal in the East goes even further and intimates that some judges voted for Auburn because they got jobs there. There is nothing new in this. That game was worked at Cleveland and Rochester. Mr. John Drechsle, secretary of the Rochester show at that time, could tell a few things regarding this abuse of the voting power should he care to do so. The Western and the Southern members, barring very few exceptions in very few States, gave New York the frapped shoulder. A few New Yorkers had an attack of cold feet also. We admit that Secretary Crawford's letter of invitation, albeit, courteous and businesslike, was not calculated to stir up a member to a high pitch of enthusiasm, so as to have him pull off his coat and work hard for old Gotham, nevertheless, a little more loyalty in such matters would be more healthful and reassuring. New England members were pretty loyal, as usual. They have not forgotten the throw-down the cradle of American poultry culture received at St. Louis. But everything comes to those who wait and in the near future we hope to see a good and great meeting of the American Poultry Association held in one of the New England cities, for it is patent to all who have talked to Mr. Crawford recently, that as far as New York is concerned, there will be no future invitations extended. After three attempts to secure the meeting, the Honorable Secretary of the New York Show cannot be blamed for declining to make any further moves in the future. As we stated in a previous issue, New York need not, and will not, make any deals or offer any inducements

to secure a meeting of the American Poultry Association. It has stood and always will stand pat on that point.

The fact that three important shows follow each other in the first three weeks in January is a matter of grave importance to exhibitors as the following letter to us from the veteran, Supt. T. Farrer Rackham clearly sets forth:

"If I understand the situation correctly the coming will be a very busy show season and in very close proximity to each other. New York, Auburn and Boston Shows are to take place in three consecutive weeks. It certainly seems to me that it is a great pity that these three great and important events should come so close together because it is almost impossible for any breeder who does not possess two or three strings or teams of birds to compete at the three exhibitions. If the three shows were open only about three days each, say Tuesday, Wednesday and Thursday of each week it would be entirely different and it seems to me that it would be greatly to the advantage of the fanciers, exhibitors and judges generally if Auburn Show was open to the public only four days. I say Auburn because she comes between the other two large shows and while it is only one day it certainly would make a great difference to the fanciers generally and I do not believe that it will make any difference so far as the gate receipts are concerned for if it is properly advertised in the local papers that a show is open a certain number of days you get bigger crowds on these days and I often fancy that it is even better than a long drawn out show with no enthusiasm about it. It also seems to me that this should allow plenty of time to transact all the A. P. A. business that is necessary. In the past it was thought by the dog exhibitors that five or six day shows were not too long but now most of the large dog shows and all of those held under A. K. C. rules are only allowed to be open to the public four days and have been just as successful if not more so because as I say, as many people visit the show and the expenses are considerably reduced. Is not a four day show at Auburn, N. Y. worthy of consideration?"

We agree with Mr. Rackham entirely and believe it would be a good step for Auburn to take and one that would be highly appreciated by exhibitors who intend showing at all three shows. The only objection might come from the poultry institute managers, who expect to hold several sessions, and these with the A. P. A. meetings would crowd matters considerably in a four day stand. But the give and take spirit should rule in all such matters and we trust there will be no exception in the case mentioned above.

There will be quite a change in the list of judges at Madison Square Garden, New York, next January. Some new faces will be seen among the duster brigade and some old timers be found among the missing.

Geo. W. Nones, the well-known designer of poultry houses and general all around expert on feathered bipeds, accompanied by "Herr Wilhelm" Russ, paid a pleasant call at The American Fancier office one day last week. As "Billy" Russ is getting so that he is afraid of the cars, he takes the ever youthful Nones along with him when on a long walk, consisting of two real city blocks, to help him cross the streets and avoid the skiddoo machines, trucks and traction cars. Mr. Nones has some plans for a big summer campaign which will keep the chicken business booming during the dull and sultry days of summer. Mr. Nones will also furnish The American Fancier with some practical articles on building poultry and brooder houses in the near future.

Mr. A. F. Hunter, whose good work as associate editor of the American Poultry Advocate has made that paper a very important factor in monthly poultry literature, spent several days

in New York and Washington last week and made a number of calls at our office. The old gentleman is still as vigorous in health and with his pen as in the days when he piloted Farm Poultry to the harbor of success. There are still plenty of years of active service ahead for the veteran poultry editor, and may the good he has done the practical poultry business in the past be continued in the future in even a greater measure.

Another new poultry monthly will be started in New York City shortly. Who the parties back of the venture are, we have not been able to discover, but learned that a large printing concern is one of the chief backers. The title of the paper has not been pronounced.

We regret to learn that Mr. John K. Ottley, of Atlanta, Ga., has sold out his famous string of White Plymouth Rocks. It is too bad to lose such a fine fancier, but Mr. Ottley has such a full measure of honors in the show arena, and is also such a busy man six days of each week, that both, no doubt, conspired to make him take this step. If we are not mistaken, he will be back in the fold after a few years retirement. The chicken fever, once thoroughly acquired, seldom if ever leaves the person so afflicted, or favored.

Mr. D. Lincoln Orr, the famous ex-president and ex-secretary of the A. P. A. in the strenuous days of that body, paid a few hours attention to The American Fancier office one day recently. We regret that we were not able to see him, but report has it, that he will be deeper in chickens than ever next fall. Like the famous diva Patti, "Link" Orr has played many farewell engagements. He always comes back, however, for there is money in the poultry business and the gentleman from Orr's Mills, New York, has made some of it each year. Raising first class stock and treating customers on the square simply made it easy for him to build up a fine trade. The only trouble with "Link" is that he lives on uneasy street. When he gets the partner he is looking for, we will be at the ceremony and watch him settle down on easy avenue, with all the comforts and joys of home and a big bunch of White and Columbian Wyandottes to keep him supplied with the ready cash, so necessary in executing the living stunt in these days of high prices and perforated incomes.

Mr. C. J. Ross, the photographer artist of that fine publication, Town and Country, returned from San Francisco last week. He had a bunch of magnificent views of the fine buildings, villas and scenery of the now desolate and smouldering ruins of the City of the Golden Gate. Mr. Ross left California only a few days before the terrible earthquake that destroyed the metropolis of the Pacific Coast and made hundreds of thousands homeless and penniless. To look at the beautiful views that Mr. Ross showed to us and then pick up the daily papers and read of the total destruction of most of these subjects, conveyed in a great measure, the terrible destruction wrought by earthquake and fire. Mr. Ross was fortunate in leaving at the time he did, for even had he escaped with his life, the chances are that the work of months would have been totally destroyed.

The secretary of the National White Wyandotte Club sends out a very interesting report of the proceedings of the seventh annual meeting, held at Chicago, Ill., January 24, 1906. A total membership of 1,450 shows a remarkable growth of this comparatively young organization, and is a fine example of the hustling ability of the secretary, Mr. Ross C. N. Hallock. The ornamental vice-presidents were dispensed with and in their stead, State secretaries were created. The duties of the latter were defined as follows: "To look after the membership in their respective States; to receipt for dues and membership fees on blanks to be furnished by the secretary of the club, and to forward all such money collected to the club secretary; to look after the awarding and placing of the club ribbons and other specials offered by the club in the various States, and to see that these offers were placed in the hands of the proper authorities." This is business with a big B. It makes everybody work who holds an official position, the now famous "but father," not excepted. The receipts of the club for the past year were, \$2,990.30; the disbursements, \$2,412.74, leaving a balance of \$577.56; a nice slice of coin to start the next campaign with.

At a recent meeting of the poultry fanciers of Philmont, N. Y., and vicinity, an organization was formed to be known as the Philmont Poultry, Pigeon and Pet Stock Association. The following officers were elected: Wm. Richardson, president; Geo. Cookingham and E. P. Chapman, vice-presidents; G. J. Anderson, secretary; John Brennan, treasurer. The first annual show will be held December 4 to 7. The Hon. D. A. Nichols is to officiate as judge and that means a good entry and first-class judging. There are so many good poultry fanciers in Columbia County and in the adjoining counties, that there can be no doubt of the success of this, the first annual.

Under the heading, "Bantam News," a new department will be created, and "Uncle Dudley" will be the editor of the same. It will be of interest to our readers to learn that Uncle is an old-time fancier of Bantams, who not only has an intimate knowledge of how to mate, breed, feed and show the little feathered pets, but has a wide acquaintance among the Bantam fanciers of this country. He wields a graceful pen and can touch up the little peculiarities of some of his friends to the queen's taste when the occasion requires, and from what we know of Uncle's habits and methods, there will be something lively doing all season.

Speaking of Bantams reminds us that Freiherr von Bremen Zimmer, of Gloversville, N. Y., has imported some of the Palace and International Show winners in the Silver Sebright classes, and will be ready for the Bantam breeding season, which begins next month, with a grand string of finely mated birds.

"Uncle George" Rowland, the Jersey pigeon king, has the Sebright fever also, and sent over for a fine lot of breeders to one of the greatest fanciers of the beautiful Silvers in Scotland.

We are glad to note this great interest taken by leading fanciers in what is generally accepted as the most skillful and beautiful production in the feathered kingdom at the hands of man. The name of Sir John Sebright will live as long as the magnificent variety of fowl named after him, and which he originated, are in existence.

The Hon. William L. Davis, master of Willow Brook Farm, Berlin, Conn., has been unfortunate in securing the services of Harry M. Lamon, who was a shining light in the Buff Leghorn alley some years ago, having produced the best in the land and met and defeated all comers. Harry was not very slow in the Buff Rock game either and succeeded in building up a great strain of these birds. Mr. Lamon and family will remove to Willow Brook Farm at once and Harry will give his full and undivided attention to its affairs. This new move should place Willow Brook Farm far in the lead with that hustling team of young fanciers, Messrs. Davis and Lamon, to cut out the running. We congratulate both proprietor and manager and wish them all kinds of success.

Mr. W. T. Lord has bred Buff Wyandottes for quite a number of years and during that time has shown some very fine birds and won some very juicy prizes at leading shows. This makes him feel somewhat elated and self-satisfied. Consequently he hands to the trembling Buff Wyandotte world the following defi:

A CHALLENGE.
To All Buff Wyandotte Breeders of America!
(Nothing More—Nothing Less.)
It is very interesting to note the claims of many of our Buff Wyandotte breeders in their advs. in the different poultry journals, as follows:
"The largest breeder of Buff Wyandottes in the world."
"The largest Buff Wyandotte plant in the world."
"Best flock of Buff Wyandottes in America."
"Largest breeder of prize-winning Buff Wyandottes in the world."
"The best in the world."

Now to know just "who is who" and to let the public decide for themselves who breeds the best Buff Wyandottes of today, I would very much like to see all the largest breeders of this variety come together the coming winter in one grand battle, and to this end I would like to be one of seven or more breeders to donate \$25 each, in gold, to be given as a gold special, for the best 3 cocks, 3 hens, 5 cockerels, 5 pullets, and three pens at Madison Square Garden, New York, January, 1907.

I have in mind seven of the most widely known breeders of this variety, viz.: Simon Beuth, R. W. Sturtevant, W. R. Wooden, Andrew Riddell, L. C. Piser, A. W. Hawkins, W. T. Lord, and if these breeders have enough sand, we can see the largest and best class of Buff Wyandottes ever shown.

Come, now, boys, "cough up," and don't offer any excuses, as you will have plenty of time to get your birds in condition.

What say you all?
W. T. LORD,
Troy, N. Y.

In answer to the above challenge we print the following letter sent to us by Mr. J. E. Burt, of Athol, Mass.:

"Would you kindly allow me space in your valuable paper to reply to the challenge of Mr. W. T. Lord, of Troy, N. Y. He says in part: 'Now to know who is who, and to let the public decide for themselves who breeds the best Buff Wyandottes of to-day, etc.' Evidently Mr. Lord does not consider me eligible to compete with other breeders as my name is not included in his list. Perhaps if Mr. Lord had inserted in his challenge that the birds to compete must have been bred and raised by the exhibitor, not bought or 'borrowed' it would have been easier to have found out who was breeding the 'best Buff Wyandottes.' Perhaps Mr. Lord intended to cut out small breeders like myself by requiring them to make such a large entry as he named. We are not all blessed with the long pocketbook to go out and buy such long strings. We are not combining with two or three other breeders to show what is the 'best' of all flocks. We are showing what we have

bred ourselves. Come, Mr. Lord, modify your challenge and let us all in. Perhaps some of us small breeders would have the sand to put up. What say the other Buff Wyandotte breeders?"

Will other Buff breeders kindly send in their replies, for there are quite a few outside of those named by Mr. Lord that can show a string of good ones, and the chances are that many a "dark horse" may be under cover in the yards of some of the so-called small breeders. In order to make this game a fair and square test of real merit, no handicap in the shape of padded entries should be imposed.

W. T. Lord

IT IS TO LAUGH.

As I am a breeder and fancier of game fowls, naturally I receive a great many papers devoted to Games. In looking over the advertisements of different breeders, I saw all kinds of fancy names for different strains, and I will confess that they make me laugh; fancy names like Puff Balls, Cannon Crackers, Asphalts, etc. I believe the Game men make a great mistake in advertising that way. If you win a reputation in the pit you win it under your own name and it is worth dollars and cents to advertise your own name and not the name of a strain. Take the big breeders of Barred Plymouth Rocks. E. B. Thompson has Ringlets, A. C. Hawkins has Royal Blue, C. L. Miles has Montauk, and C. H. Wells has Wellslia, but all these gentlemen are well known by their own names and not by the name of their strain.

Just realize, brother fanciers, the free advertising they get when small breeders advertise. They have Hawkins, Thompson, Miles or Wells stock, but the Game men have a fad of naming their strain of birds, and what is the result, no one knows you.

Taking up a prominent paper devoted to the noble Game I couldn't tell who were the originators of three-quarters of the strains advertised, and I read them pretty thoroughly, and am no innocent at that.

If a man has good game cocks, let him advertise under his own name and don't hide it behind a fancy name for a strain. Another thing is that a great many people advertise a strain, say, Puff Balls, for instance, that haven't got them, and if a bird sulks or flies the pit, the originator, if known, gets the blame, so if you have Game cocks advertise under your own name and don't be afraid of the performances.

"HUTCH."

CORRECTION.

Editor American Fancier:

In looking over your list of awards at the Cincinnati Show I note that you have Fishel as winning first on cockerel and me as winning fourth and fifth. I won first and third and will thank you to correct.

J. F. DEFANDORE.

Garrett Park, Md., April 16, 06.

THE BEST PUBLISHED.

Editor American Fancier:

Enclosed find check for \$1.00 for the best poultry paper published. I am glad you are at the old stand again, and trust you may have success.

CHAS. T. CRAIG.

Tillson, N. Y., April 12, 06.

The poultry keeping fraternity is being especially favored these days by a continued run of good weather, and more than fortunate are those with chicks out.

There is nothing so helpful to chicken rearing as long days of bright warm sunshine, when they can chase themselves and each other around, growing every moment.

The warm days have their disadvantages, also. The ancient enemy of hendom, the louse, also feels the rejuvenating influence. Suppose Uncle Noah had his pair with every fowl. From the numerous descendants, there may have been several or more pairs. Spray the houses with whitewash and coat the roosts with kerosene.

The nicest roost arrangement we have seen, as regards to lice, is a piece of two by four scantling resting on the platform to lay the poles on, but not touching the building at any point except the platform. The least fixtures and old trash about the houses the less lice. One is conducive to the other.

I have been experimenting in a small way with dry feed since my former mention of the new way of feeding; have not gone to the extreme of absolute dry feed, but have used about one-half the moisture formerly required.

I find my bucket of feed now weighs about one-half as much, also that it is impossible for greedy hens to gorge themselves, they have to take more time to a meal. They require more water but see no difference in the output of eggs; an increase if anything.

In conversation with an advocate of the dry fed mash, he stated that he gave one quart of grain to each fifteen head in the morning when liberating for the day, and kept the dry-ground feed where they could eat it at intervals or continually throughout the day; said he could feed his stock easier and in one-half the time, and as in my case, he saw no decrease in eggs laid.

Should this method prove to be a general success, a new style of feeding devices or troughs will have to be provided, to keep the fowls from scratching in the troughs and prevent waste.

How many chicks can a hen rear successfully, depends on the size of the hen and how many you have to give her; for the American class fifteen should be an outside number, an even dozen is better; some hens will raise twenty, but they are scarce and hard to find. We have one whose brood numbers seven varieties, a neighboring hen crank says no doubt she will be a success, we hope so.

Recently we had three hens hatching at the same time, one sat irregularly and hatched a day late, her chicks were white or buff and she will not tolerate others from the brood in the next coop near her.

PIGEON FANCY

EDITED BY H. M. POCKMAN

IMPORTED THIRD PALACE—SIRE OF MANY AMERICAN WINNERS

ANNUAL MEETING EASTERN FANTAIL CLUB OF AMERICA.

Members present, Messrs. Geo. E. Rowland, Wm. J. Stanton, Jas. Blair, Alex. Hay, H. Clements, Jas. Glasgow and H. M. Pockman.

In the absence of the President, Mr. T. A. Havemeyer, Mr. George E. Rowland was called to the chair.

The following gentlemen were admitted to membership: Messrs. Coleman Young, San Marcos, Texas; G. L. Coburn, Boston, Mass.; C. Williard Hill, Hazelton, Pa.; Wm. Schock, Chicago, Ill.

Election of officers, 1906:—President, Sam'l Johnson; Vice-Presidents, Geo. E. Rowland, T. A. Havemeyer, Jas. Blair, Alex. Hay and William J. Stanton; Secretary-Treasurer, H. M. Pockman.

Proposed by Blair, seconded by Stanton, that the following gentlemen form a committee to arrange a list of specials for next season:—Messrs. Samuel Johnson, T. A. Havemeyer, George E. Rowland and H. M. Pockman. Carried.

Proposed by Pockman, seconded by Rowland, that in the list of specials the Boston and Chicago National Poultry, Pigeon and Pet Stock Association Shows shall compete for gold medal for the best Fantail in the show owned by a club member. Carried.

Proposed by Glasgow, seconded by Blair, that the Secretary send voting slips for judge at the next annual meet by July 1, 1906, to be returned on or before August 1, 1906. Carried.

Proposed by Blair, seconded by Hay, that the committee on specials shall offer money specials on all 1906 bred classes for 1st, 2d, 3d, and 4th. Carried.

Proposed by Hay, seconded by Blair, that a list of specials be printed in pamphlet form and mailed to all members. Carried.

Proposed by Hay, seconded by Glasgow, that the club meet at New York, Madison Square Garden, 1907. Carried.

Proposed by Rowland, seconded by Stanton, that the annual dues shall be \$2 instead of \$1 hereafter. Carried.

Proposed by Glasgow, seconded by Clements, that the meeting adjourn to that date. So ordered.

H. M. POCKMAN,
Secretary-Treasurer.

SEASONABLE HINTS.

In breeding fancy pigeons you should always remember that, as a general rule, the cock has the greater influence as far as color is concerned, while the hen is said to have more to do with the style, shape and body points generally. In breeding varieties where smallness of body is a feature, such as Fantails, African Owls, Pigmy Pouters, etc., try and procure as small as possible, and pair with birds strong in color. Better results will be gained by this mating than vice-versa.

The Home of Many Up-to-Date Fantail Winners.

Damp lofts are absolutely fatal to successful pigeon culture. Most varieties can stand any amount of cold, but damp and draught will cause endless trouble.

* * *

When you find a bird out of sorts it is better to take it away from the others. Put in a pen and feed good wholesome grain with an occasional pinch of Epsom salts.

H. M. Pockman

MAGPIE TYPE.

By a Prominent English Breeder and Exhibitor.

In my opinion an ideal Magpie should exhibit the body lifted well off the ground, showing a judicious amount of leg and thigh, proportionately similar to the Carrier, and be slender in chest, with a flat back, and a neck long in comparison to a correct body. The neck should be slender, and of almost one uniform thickness, tapering off at the shoulders. In this latter respect it should again bear a resemblance to the Carrier, but in a miniature form, and be in direct opposition to the Tumbler. The bill should be fairly long and straight, and the face of the bird should be about the same extent, and duly filled in, the head gradually and almost imperceptibly rising from the wattle to immediately above the eye, which should be the highest point, then gently falling away to the neck, making a clean finished, and graceful sweep of skull. The eye, of course, should be white, with a minute pupil, and perfected with a fine salmon cere and wattle. It is needless to say that the bird should be wholly free from gullet. Briefly speaking, the making of a good Magpie is correctness and brightness of colour (an important element), eye and cere, shapely head, straight face, freedom from gullet, sweetness of bearing, and erect and high carriage, combined with slenderness, the latter being one of the chief characteristics of the bird, which, however, must not exhibit weediness.

I consider the Magpie complying

made, a bird of this character would compare most favourably with, and in many instances would excel, the short legged and short necked undesirable type of the past, in regard to slimness of body. Moreover, I fear that the reason why certain fanciers are trying to quell the reachy bird, is because they either do not possess it, or have not the heart to surmount the difficulty attending its production.

I concur that heavy built reds of a plummy colour should be excluded from the prize list, colour being essentially one of the foremost necessities of the present day Magpie.

Many persons believe if they have got a Magpie with a long bill (which they term face), and well cut, they have a bird to be proud of, but this idea is altogether erroneous, as you must particularly have length of neck, combined with all round qualities, to make a show bird. Fanciers must bear in mind that they must breed to colour, the correct tint must be upheld, and type rigidly maintained.

JUDGING FANTAILS AT BOSTON.

Editor American Fancier:

I notice in your editorial of April 7th a short article referring to Mr. Geo. Rowland's imported White Fantail cock, winner of the Fantail Cup at the Crystal Palace Show last November. Also a number of other remarks, bearing on the judging, etc., at the recent Boston Show. Being a firm believer in your old established policy of giving both sides of the house an airing, I take up my pen to try and offset any wrong impression that might have gone abroad amongst the Fantail fanciers, through reading the fore-mentioned article.

Being personally acquainted with a number of facts, connected with the English winner, I believe it my duty, in justice to the bird itself, to give those facts to the fancy in general, and let them form their own opinion, whether the judge propagated a case of mental aberration, or whether the bird was fairly beaten; as shown.

To correct the first error in the article, the bird was never shown at New York, and consequently could not have won a prize. He did not arrive from across the water until the latter part of the week, and to quote my friend Rowland's own words; he said, "the bird was rough and somewhat out of condition."

Now to the Boston Show, I was on the anxious seat, until I got a glimpse of the much-touted champion of the other side, and lost no time in getting to the pen where Brother Pockman had just placed him. I saw at a glance that the proper place for the bird was at home in the loft; tail fagged, and a gap in the centre an inch wide, the feathers not properly dried from the washing process, and all in all, showing the wear and tear of what he had gone through.

A Fantail out of feather is bad enough to see anywhere, but when pitted against the cream of the other lofts, in the show room, it is only natural that its condition would tell against it.

All feathered stock have to be judged on their merits at the time of judging, and not on past performances, no matter how great they may have been. The quality of this bird is beyond question, but our experience has been, that condition is the trump card

with the above requirements is the typical one to breed to, being an undoubted advancement upon the almost antiquated Tumbler kind of bird, and the road to advancement, and not retrogression.

The reachy bird, to my mind, is the bird of the future, and although it has apparently appeared large to some, yet it is discernible to the experienced eye and thoughtful brain, that it is the length of leg and neck which has caused this delusion, and if due scrutiny and careful observation were

to be played when seeking the coveted blue ribbon.

Now to the more delicate question, that of a competent judge to adjudicate on show crackerjacks of to-day and the has-beens of yesterday. The judge in question has been a breeder of Fans for a good many years, has imported at great cost, some of England's best, has bought of friend Pockman some ideal specimens, and at the present moment owns as fine a loft of Black Fantails as the writer has ever seen, the majority of them bred by himself.

Now, my dear Editor, you must agree with me, that this is the proper school to attend, if one desires to learn what an up-to-date Fantail is, and I certainly must take exception to Mr. Rowland's remarks, when he asserts that the gentleman is not up on Fantails.

The Boston management were congratulating themselves on having solved the problem of a Fantail judge and no doubt Mr. Rowland's assertions will strike them like a bolt out of a clear sky.

When at the Show I was given to understand that Mr. Johnson would be requested to officiate again, because of the general satisfaction displayed by the exhibitors present.

Mistakes were made, as they always will be, where large classes of good quality are encountered, but that there was any favors shown to anyone in the awards was a revelation to me.

I trust friend Rowland will reconsider his decision in regard to not showing under this judge again, as the fancy can ill afford to lose the support of such a sportsmanlike fancier.

I agree with you, in that Secretaries should provide the most competent judges available, but nine times out of ten, they are dictated to by Specialist Clubs, who nominate a member for the honor, and if he fails to make good they swallow their medicine and say nothing.

JAMES GLASGOW.

SPRING.

Open up the windows
Looking to the south,
See the red carnation
Like a coaxing mouth
Holding up for kisses;
Summer is about,
All the trees are burgeoning,
Buds are coming out.

Open up the windows,
Open all the doors,
Yank the rugs and carpets
Up from all the floors,
Wreck the cozy corners,
Summer is about,
Time you're getting busy,
Turn the microbes out.

Hang the rugs and carpets
Out upon the line,
Where the air is balmy
Where the glories twine;
Leave them there where papa,
Fat and short of breath,
Can get action on them,
Beat himself to death.

Spring is in our midst now,
Flowers all a-bloom,
Suds and soap and dust-rags
Litter every room;
Waxy spuds for supper,
Crusts all dried and hard;
Red rugs and carnations
Littering the yard.

THE SILKY FOWL.

(From The American Stock-Keeper.)

A small fowl, the cocks ranging from two and one-half to four pounds each, and the hens from two to two and a half pounds; of a rather square, compact, Cochon build; crested, the cock's crest running back horizontally, while the hen's is globular; Dorking-toed; feathered legged; double comb of lumpy character, broader than its length, with few or no points on top, and of a dark purplish color; earlobes blue or purple tinged with white; skin violet approaching black, the covering of the bones being of the same color; shanks dark blue or black; plumage in color white, in character resembling the downy part of the ordinary feather; that is the Silky fowl.

It is not singular that its strange appearance early attracted the attention of naturalists, and we therefore expect to find something said about it as we look into the old books. Nor are we disappointed. Gesner, who lived from 1516 to 1565, in his "History of Birds," published engravings of several varieties of poultry. One of these, by him termed Gallina Lanigera, represents a woolly hen, a rose-combed, clean-legged, four-toed bird, without tail feathers. Aldrovandus, to whose work, published in 1645, we have several times referred, also describes and illustrates a woolly hen and affirms that in the East fowls are bred whose plumage is white as snow, that they are covered not with feathers but with wool, like sheep, and that in the city of Quelinfu, M. Paulus Venetus says that hens are to be found which have hairs like a cat. In the illustration of Aldrovandus we find that the woolly fowl is tailless, with invisible wings, a double comb deeply serrated, well developed wattles, short, stout legs, and four toes upon each foot. It has been suggested that this fowl might have been a frizzled fowl or a cassowary, but in all probability it was what we now term a Silky fowl, or, as our Standard has it in the plural, "Silkies."

Its native home is in the east of Asia. Mr. Edward Blyth, once Curator of the Asiatic Society's museum, writing from Calcutta, says: "The only Silky fowls I have seen here were from China or Malacca or Singapore; the latter with single red combs and wattles; the former with complex, blackish rose combs, very short stubby beaks, and a quantity of glaucous blue skin in place of wattles, imparting a most remarkable appearance."

It will be noticed that the representation of the old authors give us a four-toed fowl, while the modern Silky has a fifth toe. Whence came this extra toe? Upon this subject all of the books are silent, although we know that the fifth toe occasionally disappears and four-toed chickens are bred. Did it come in as the result of some cross, or was it produced accidentally? We do not know, and we have never seen the question before suggested.

Silky fowls look much larger than they are. Their feathers, when in prime condition, are exceeding loose and fluffy, standing out from the body in all directions, giving them an apparent size which their actual weight does not justify. The smaller specimens are often exhibited as Silky Bantams, and they are not inappropriately included in that class, for they often scarcely exceed the stand-

ard weights for such varieties as the Sebrights and Rose Combs.

The Silky fowl lays a small egg of a pale buff color. They lay from ten to twenty-five before offering to sit, and make exceedingly good sitters, exemplary mothers, and valuable fowls under which to rear Bantams, Pheasants and Partridges. Their downy plumage makes a warm coverlid for the tender little ones of the more delicate varieties. Indeed, so well suited are they for this purpose that some have declared it a mistake to breed them small, but that they ought to be bred as large as possible and kept for the especial purpose of hatching and rearing the young of other varieties.

The chickens of the White Silky are clad, when first hatched, in canary colored down, and are exceedingly pretty and attractive little creatures. They are not difficult to rear if not hatched too early in the season. About the first of May in New England would be early enough for this purpose.

The Silky fowl is easily restrained by low fences, its wings being of but little use for flight owing to the structure of the feathers, and is happy and contented in confinement. It is a fair layer and easily kept. But its dark skin and the colored bones make it appear unsightly upon the table. Its flesh, however, when once the prejudice to the color of the skin is overcome, is delicious eating, as Temminck early remarked. "It is certain," he says, "that the flavor and whiteness of the flesh of these fowls greatly surpasses that of other poultry, and if their disagreeable aspect when on a dish did not keep them from our tables, we should estimate them as fully equal to Guinea fowls, which they resemble in the whiteness and flavor of the flesh."

The Silky fowl is hardy, being specially subject but to one disease, scaly legs, or elephantiasis. To this trouble it seems more liable than most fowls, but as it is easily cured when it appears, and may be prevented by good care, this is not a very serious objection.

A more serious one is the fact that their feathers become more easily saturated with water during wet weather, and that from this cause, colds, and the serious train of ills which follow them, are likely to ensue. This difficulty is to be overcome by affording them better protection from rain storms.

In crossing the Silky with other varieties the plumage loses its distinctive character in the progeny, but the dark colored skin is retained, for several generations. Like the sins of the father in the human race, it "is visited upon the children even to the third and fourth generations." Such crossed fowls, however, seem to inherit the excellent sitting qualities of the Silky, and while of little market value, are excellent for the purposes of incubation.

But very few Silkies are bred in this country, while in England they have been popular enough to secure a class for themselves at some of the shows, and not only that but to fill it with a goodly number so as to make competition close.

The plumage of the Cochon partakes more or less of the character of the Silky fowl, and in some specimens it so closely resembles it as to win for it the name of Silky Cochon or Emu fowl. It is worth while to give atten-

tion to this fact, and to further resemblance in figure, feathered legs and other characteristics, even to the incubating instinct so strongly developed, and the color of the eggs. That the combs should be entirely distinct is a matter not to be surprised at when one remembers the relationship between the single-combed Cochin and the pea-combed Brahma. Here is a comb which is only rose by courtesy, resembles somewhat the pea, although quite different, approaching the Malay type of pea-comb, and yet upon a bird with many decided Cochin characteristics.

Silky fowls with a black plumage have been reported, but we have never seen any, nor have we heard of any being exhibited. It is quite possible that coal black chickens might be produced from White Silkies, as they certainly have appeared among other white varieties.

There is often confounded with the Silky fowl, in compilations upon poultry, the Negro cock, which has a black skin and dark periosteum, but plumage like ordinary fowls. This latter fowl is a probable cross of the Silky with some other variety, inasmuch as we have seen that in such a cross the black skin is retained, while the silky plumage is lost. This is rendered still more probable from the fact that the Negro cock is in some localities called the bastard Silk fowl. It has a black plumage with bronze reflections, and shows its relationship to the Silky in the manner already indicated, and also in the general characteristics of figure, legs, comb, and so forth. By some writers it is regarded as a distinct variety, but we think there can be little doubt that it originated in a cross. It may now breed with sufficient certainty to be properly regarded as a distinct variety. Silky fowls themselves are often called Negro fowls because of the color of their skin. This variety is so little bred in the United States as hardly to demand directions for mating, yet, as it may be more extensively cultivated in the future, such directions are not out of place. In selecting the brood stock, special prominence should be given to the silky or fringe-like character of the plumage, as this is the fowl's most distinctive feature. The crest should next be considered, and then the general symmetry, the fifth toe, the leg feathering and the purity of the color. As the combs are somewhat uncertain, only rose combed birds should be bred from. In a word, select Standard specimens of both sexes, and rigidly adhere to this rule in all matings. This is the best rule for most breeds, and the only rule for Silkies that promises success.

NOTICE TO CORRESPONDENTS AND ADVERTISERS.

Owing to the increasing circulation of The American Fancier, together with a corresponding demand upon our advertising columns, correspondents and advertisers are notified that all communications should reach the New York office of The American Fancier, Havemeyer Building, No. 26 Cortlandt Street, or to Ossining, N. Y., before 4:30 o'clock, P. M., on Monday of each week, in order to secure insertion in the current issue of the paper.

BANTAM NEWS.

"The proudest Bantam in any barnyard crows two octaves higher when he is scratching in some other rooster's gravel."

I note with considerable satisfaction that several of our Western incubator manufacturers are taking out all their machinery and are converting their buildings into Bantam houses. "Truth crushed to earth, etc."

What is the value in our money of a German Schilling? The Eastern Bantam fanciers have lost one, but I understand that Prager, of Illinois, and that foreign coin are out to do several things to Eastern breeders of Buff and Black Cochin Bantams.

The long list of owners of the "entire stock" of a certain strain of Buff Cochin Bantams sold recently, rivals, in point of numbers, the heirs of Anneka Jans, or the nails from the coffin of Christ, found in the cathedrals of Europe.

The International Bantam Breeders Association, of Chicago, has sent out invitations in several languages to Eastern Bantam men requesting them to become members. It is hoped that it will have the success which it merits, but unless Chicago puts up a greater exhibit of Bantams than at the last show, the Western breeders must join hands with the National Bantam Association and meet in New York. Isn't that proper, Clyde?

Charles Buff Cochin Smith, of Brooklyn, has recently started a poultry feed and supply store in that bailiwick across the bridge. His friends wish him success in his venture and hope that he will not take in any wooden money.

Bantam breeders, as well as others, are glad to learn that the Furst Kaiser Wilhelm der Erste, from Bremen, with her hold full of "Pilsner Papers," has been reported off Fire Island. Hope she won't slip when she comes to dock.

Alderman H. J. Quilhot, of Johnstown, N. Y., is reported to have sold everything in feathers except his canary bird, but Quil is pretty apt to become chicken-hearted again soon. His last success was with Silkies, but he found that it interfered with his milk business. After looking at the purple or blue heads of the birds he couldn't tell whether he had water enough in his milk or not. John Blunck bought the Silkies, but he isn't in the milk business.

UNCLE DUDLEY.

MR. RIDDELL RE-ANSWERED.

Editor American Fancier:

I see that Mr. Riddell has answered my criticism of his "write-up" of "Buff Wyandottes at New York," and makes it appear that I claim Ed. Pensyl's cock bird to be the best in the class. I thought so at the time, but I discovered later that his shanks were filled with stubs. As to 1st and 2d cockerels, will say that they were absolutely solid Buff, while 3d cockerel had lots of dark in his wing, and tail was almost solid black. If 3d cockerel had been changed to 1st, of course, there would have been no harm done, simply because it would have pleased Mr. Riddell. Mr. Riddell writes that on account of my tender age as a breeder and exhibitor, he is sorry that he hurt my feelings, etc., etc.

Forget it, Mr. Riddell, for I understand I hurt your feelings very much when I beat you at the Great Eastern Show. GEORGE M. BELL.

LA FLECHE.

GRAND PEN COCK OF LA FLECHE, Creve Couer and Red Caps, winners of many firsts, at the Ontario, World's Fair, St. Louis, Boston, Mass., Sherbrook and Ottawa Shows. Eggs, \$4.00 for 13. J. H. Warrington, Cornwall, Ontario, Canada. 646-648

COCHINS.

BUFF AND PARTRIDGE COCHINS and Cochins Bantams.—Winners, descendants of winners and breeders of winners. Fine coloring and plenty of feathering. First Buff Cochins cockerel, Rochester, 1904; fourth Partridge cock, Harrisburg, 1905; first Partridge Bantam cockerel, Harrisburg, 1905, head the pens, and Buff Bantams are the cream of 12 years' breeding. Eggs, \$3 per 13. Three fine Partridge Cochins pullets, \$3 each. Circular for stamp. Louis P. Graham, 727 Walnut St., Philadelphia, Pa. 553-tf

AT BOSTON, AMERICA'S GREATEST Cochins Show, 1906, Murray's White and Black Cochins made a grand record, winning on Whites, the \$100.00 Challenge Cup, best White Male and all specials offered. Also, 1, 2 Cock, 1, 2, 3, 4 Hen, 1, 2 Ckl., 1, 2, 3, 5 Pullet. Blacks, 3, 5 Cocks; 1, 2, 3, 4 Hens; 1, 2 Ckls.; 2, 5 Pullets; best display. Best Cock, 4 Hens; also, color and shape specials. Stock for sale. Eggs, \$3 and \$5 per 13. W. G. Murray, Strathroy, Canada. 638-47

SUPERB BUFF COCHINS AND BUFF Leghorns—My birds have always won places in competition at Newark, N. J., Philadelphia, Harrisburg, Reading and Hazelton, Pa., including a Silver Cup at Hazelton. Stock and eggs in season. W. N. Watson, Sunbury, Pa. 645-647

OUR WHITE COCHINS ARE ACKNOWLEDGED to be the best in America. Eggs, \$5.00 per 15. Fertility excellent. Order now. Clayton & Freeman, Plainville, Conn. 647-649

MILLARD'S BLACK COCHINS—EGGS for hatchings. I have only one pen, headed by first cockerel at New York, 1906. Eggs, \$4.00 for 15. R. B. Millard, 345 Princess Ave., London, Ont., Can. 648-650

LANGSHANS.

THE BEST IN BLACK AND WHITE Langshans. Celebrated winners, Hagerstown, Pan-American, Syracuse, Louisville, Newark, Cincinnati, Rutland, Dayton, Cambridge, Poughkeepsie, Carlisle Shows. Our strains have the Langshan characteristics of prolific winter laying of large eggs, desirable green sheen, standard weight, low, evenly serrated combs and lordly station. Excellent show and greeding specimens. Eggs, \$2 and \$3 per 13, expressage prepaid. George Bealer, Nicholasville, Ky. 30tf

IVES' BLACK LANGSHANS, "A GOOD Strain of a Good Breed." Consistent winners at the big shows. A few grand cockerels for disposal. Eggs that will hatch, \$2.00. Paul P. Ives, Guilford, Conn. 637-49

DUCKS.

COLORRED MUSCOVY DUCKS, QUIANT, odd and beautiful. The finest duck for the table, mine have never been beaten in the show room. Birds and eggs for sale. Send for circular. H. M. Carpenter, Box 203, Ossining, N. Y.

THREE 1905 TOMS, PURE, WILD, ON Bronze (Wolf). Cheap to clear. Some good Indian Runners and Aylesburys. 1905 Toulouse Gander, a prize winner, all from imported parents. Lakenvelders, Faverolles and Old English Games, as good as I could get in England. Eggs. Mrs. R. J. Farrar, Orange, Va. 645-649

INDIAN GAMES.

CORNISH INDIANS, USEFUL AND beautiful, a fowl worth raising. I have the largest and finest flock in this country, always winners, send for circulars. Stock and eggs for sale. H. M. Carpenter, Box 203, Ossining, N. Y. 640-tf

INDIAN GAMES—EGGS FROM TWO pens of as good Indians as can be found, two males, nine females, winners, 11 breeders. Particulars for stamp. Exchange a few eggs for eggs of other breeds, Games and Bantams. Frank M. Thomas, Jr., Catskill, N. Y. 647-649

I AM THROUGH BREEDING AND offer a nice lot of Indians; cockerel, 2d Johnstown, also 1st pullet and five sisters, all nice birds, heavy laying and bred from winners. Seven birds cheap, fifteen dollars. Frank M. Thomas, Catskill, N. Y. 648-650

ANDALUSIANS.

BLUE ANDALUSIANS ONLY.—Standardbred, choice stock. Eggs, \$2.00 per setting. Address Rev. Philip N. Moore, Ballston Spa., Saratoga Co., R. F. D. No. 2, New York. 642-654

WINNERS CORTLAND, DRYDEN, Binghampton, Ithaca, Single Comb Blue Andalusians. Eggs, \$1.00 for 15; \$3.00 for 60; \$5.00 per 100. Rose Comb, \$1.50 for 15. Genegantslet Poultry Farm, Greene, N. Y. 646-648

MY STRAIN OF BLUE ANDALUSIANS have been first prize winners for more than ten years. This season, at seven shows, won twenty-five first prizes, and twelve Andalusian Club ribbons. \$2.00 for 15; \$3.00 for 30. J. E. Bliss, Clinton, Conn. 647-649

EGGS.

EGGS FOR HATCHING—FROM PRIZE winning Barred and White Plymouth Rocks, White Wyandottes and R. C. Brown Leghorns (bred on separate farms). \$2.00 per 15; \$5.00 per 45; incubator eggs, \$5.00 per 100. H. W. Bunk, Germantown, Col. County, N. Y. 645-647

WE WIN!At the late Madison Square Garden Show, New York, in
the S. C. Buff, Black and White Orpington classes as
follows: Seven firsts, 9 seconds, 7 thirds, 4 fourths and 4
fifths, and these in the strongest classes of Orpingtons
ever put together, there being 370 birds competing. We
also won the most prizes of any breeder in these same
classes. We have the stock and established winning
breeding lines, but buying high-grade stock and eggs
cannot safely be done upon the strength of the mere
argument a breeder has room to advance in his adver-
tisements. Now we want you to send for our catalogue,
testimonial book and a very elaborate mating list, des-
cribing over forty different breeding yards and prices of
eggs for same. Do not be fooled or misled by mis-adver-
tising, but come to the fountain head to get your start.**Willow Brook Farm****W. L. DAVIS, Proprietor**

Otsellic Farm

Whitney's Point, N. Y.

ESTABLISHED 1888

I can furnish you anything for the show, ornamental or general utility purposes in Poultry, Pigeons, Rabbits, Cavies or Guinea Pigs, Pheasants, Guinea Fowl, Pea Fowl, Ornamental and Wild Water Fowl, Swans, Etc. Stock for sale at all times; write me your wants.

Eggs for Hatching

ONE DOLLAR FOR FIFTEEN: \$3.00 for 50; \$5.00 for 100; from good stock, each bred on a separate farm with full and unlimited range—no other fowl on each farm excepting the one breed. This means eggs are the kind you order—a big percentage of fertility and strong, healthy chicks. As to quality, none better at any price. Eggs from the following varieties: White Wyandottes; Barred, Buff and White Plymouth Rocks; White Langshans; Anconas; Rose Comb Brown, Rose Comb White and Single Comb White Leghorns; White and Black Minorcas and Brahma Bantams.

Duck eggs, \$2.00 for 11, from Colored Muscovys, Pekin and Indian Runners.

All eggs guaranteed fresh laid, true to variety ordered, a fair percentage fertile and packed in best possible manner, so they are sure to arrive in good condition.

Address all orders and correspondence to

At the New York State Fair, Syracuse, N.Y.

Martin's White Wyandottes won more prizes than any other exhibitor. First and 3rd cockerel, 1st and 3rd pullet, 2nd cock, 2nd hen and 2nd pen. This was a most remarkable win, owing to the fact that previous to this show they had been cooped nearly two weeks at the Toronto show, and thus were not in as good condition as the birds they competed with. Finest lot of Stay-White Cockerels I ever bred. Send for catalogue.

VOLUME XXV

OSSINING, N. Y., MAY 5, 1906

NO. 649

Something About Brooder Chicks and Brooders

BY MRS. DENTON COLE, WINWOOD, PA.

At this season, this is an interesting topic, especially to the amateur, and judging from the number of inquiries received relative to different brooders, and the care of chicks, after writing an article on "Brooders and Brooder Chicks" for another publication I thought perhaps I might be able to help some of the readers of The American Fancier, (for while the leading fanciers do read this invaluable paper, still I imagine all its readers are not experienced fanciers.)

I will begin by telling how my little fellows are doing now. Then we will consider some of the essentials to success in raising brooder chicks. My first hatch was put in brooder March 17, 49 little puff balls, 46 of which were sturdy, lively Wyandottes. Two were weaklings and were killed. The third was a little runt; lively, but a regular bantam. The 45 others are now as lively and strong as one can wish. The eggs that produced these chicks were laid during, and just after, the coldest weather and most severe blizzard of the season. But how they do grow! I never saw such shanks and bone for the age as some of these possess. I weighed two of them when just four weeks old and the two weighed a little over 1 pound. They are feathering finely, wing feathers all out, tail feathers starting, also most of them getting back, breast and thigh fluff as well as hackles, well started; there is not a nude one in the bunch as is usually the case. I attribute this—whether rightly or not—to the liberal diet of beef scrap and milk, of which I shall speak at length later on.

The next lot of 41 were put in brooder on the 8th inst., and so far are doing nicely, (by the way, I always put chicks in brooder at night, putting them directly under cover.) These are all in an open scratching shed, with double burlap curtains, which are lowered at night if cold; if pleasant both are raised during the day, and the little fellows are allowed to revel in the sunshine, where the older ones dig away and work all day in the litter. Until to-day, the little ones have seen no sun. Just after putting these out, we had the worst storm of the season, a driving, alternating rain, sleet and snow directly from the south; and it was necessary to keep the outer curtain down continually. This was followed by two damp, foggy days, but still, so curtain could be raised, and they could see to eat and drink.

After putting first lot of little ones out, we had a hard, cold storm, also, so they had to be confined to hover for three days, but as there was

plenty of room they did not suffer at all.

For the benefit of those who did not read my previous article, I will tell just how I care for the chicks from the shell to weaning time. It is unnecessary to tell those with the least experience, that the chicks must be strong to begin with. This means you must go back to parents and even further and know their ancestors were strong of constitution, free from hereditary taint of disease; then with proper care of breeding stock, your chicks have the chance to start in life as they should, and if properly brooded and cared for, they come in the world to stay—until their mission is fulfilled. In speaking of care, I want to emphasize the necessity of starting right, for I verily believe that the first few days of a chick's life determines to a considerable degree its future career. Understand, I do not mean you can give proper care a few days and after that neglect them, and expect fine, healthy birds; but I do mean that I think no amount of after-care can compensate for early neglect. It is time and labor thrown away to fuss with any decided weaklings; besides it is less cruel to quickly and humanely dispatch such, than to allow them to drag out a miserable existence for a few days or weeks. If the breeders are in prime condition and health, the proportion of weaklings will be reduced to the minimum if incubation has been right, but in any large flock, with the best of care, etc., there will be some. All lower animals, and it seems fowls especially, follow the example of many ill-bred school children I have seen, and constantly "pick at" the weak or unfortunate ones in the flock. Note how quickly they domineer over one that is indisposed or disabled.

After the hatching is all over in the machines and the last ones dried off, I remove the trays and leave the babes in the nursery to rest and gain strength until the first hatched are about 36 hours old. I leave the door open a trifle, by tying a string to the knob and hanging over a nail driven in the machine. When the machine is started, I put papers over entire bottom and over these is spread 1½ to 2 inches nearly dry fine earth, warmed in oven, if cold weather. Since using this I have less cripples, (I believe one cause of incubator cripples is sprawling out on a smooth board floor) and chicks seem stronger and more vigorous. If we notice, usually it is the chicks hatched from "stolen" nests, on the ground, that come into the world with the greatest strength and endurance. Old Mother Earth is a wonderful strength giver.

When the oldest babes are about 24

hours old, I sprinkle liberally on top of the dirt, near the glass door, fine, sharp grit and oyster shells obtained by sifting the refuse from the hens' boxes. They amuse themselves picking this up and it prepares the gizzard for the work that will be given it a little later. At about 36 hours of age they usually begin to grow restless, cheep and go about with heads down, showing plainly they are beginning to suffer for the one great need of incubator and brooder chicks, drink. So an old tea cup is procured, with a chink in the edge if possible, is filled about two-thirds full of skim milk that has been scalded, then filled up with boiled water, and we are particular it shall be just about "blood warm." A saucer is turned over the filled cup, both are quickly inverted over a vessel, and placed on a small thin board where the babes can reach it. It is only an instant before a bright little investigator learns what it is in that saucer (how quick they do learn!). In a very short time, others are "doing likewise"—another lesson of influence if we too, are ready to learn—and how soon the little heads go bobbing up and down as they sip their milk, and utter their contented little "wheat, wheat, wheat, wheat." From this time on the drinking fountain is kept filled and constantly before them, and I attribute in a great measure my success to the free use of warm scalded milk. So far as I know, I am the only writer to advocate the withholding of water from brooder chicks—except what they get in the milk. This satisfies them just the same as clear water, and common sense teaches me it prevents bowel trouble. We all know one great cause of bowel trouble is chilling. A brooder chick breathing the heated air is very thirsty, and if allowed to drink all the cold water necessary to quench its thirst it must become chilled internally. Warm water is neither refreshing nor satisfying; warm milk is both, and is the natural food for all young animals, and chicks seem to thrive on it as much as others. But it means work! The dishes must be kept sweet and clean or the "blessing becomes a curse" most emphatically, and brings about the very thing we are trying to avoid at this season. Once a day is sufficient to renew. If emptied, washed and scalded at night, it is ready for filling fresh when feeding in the morning. I use a good soap powder in washing, but sal soda or borax is as good; the latter especially is a disinfectant and cleanser. In hot weather the dishes must be cleaned 2 to 4 times daily, as they soon sour, even when carefully shaded. My chicks, so far this season, have not had a drink of water alone, and will not

have until they get on the ground and get it themselves, and a healthier, more thrifty lot it would be hard to find. Not one with a sign of bowel trouble, none "pasted up behind," all bright and lively.

The grit and drink constitutes their first "meal" when about 48 hours old, if they act very hungry; still earlier, I scatter some fine dry grain for them to get, after feeling sure each has had a "feed" of the grit. In the case of my first lot this year, and one other small brood, of which I raised each one hatched, this feed was simply fine, cracked corn (the coarse meal, that did not pass the kitchen sieve). The other flock was fed exclusively on the corn and milk until able to forage, i. e., with the addition of green food. This year, as I have no other greens, I chop up potato peels, etc., and give them. I also give, once a day, feed of "johnny cake," made of 1 part bran to 3 parts corn meal, with the infertile eggs added at first (which are few), and later, as I test often, those that die in the shell (which are many) a little salt and charcoal is put in, then all mixed with sour milk and soda into a stiff dough, and baked very thoroughly in a moderate oven; lately cooked vegetables are added. The soft side is crumbled fine and fed in dishes or on boards, the hard outer crust, after being well dried in oven, is run through the food chopper, then sifted; the coarse particles are fed dry, the fine put in next cake, or if eggs are boiled, is mixed with them. I shall not bother with johnny cakes from now on, as I have my supply of "Model" foods on hand now, and grass will soon be here. I used it before for variety. I do not think it pays to fuss with such things as a rule, but where there are only a few chicks, and variety limited, as a relish it may be advisable. I keep a dish of the coarse part sifted from beef scrap before them constantly, the same as grit and shell; they will not eat too much if allowed to go to them at will. Some writers advocate feeding this lightly after two or three weeks, etc. If you watch the hen leaving her nest with her brood of sturdy youngsters, about the first thing you will see her do is to scratch out some worms, etc., for them; then a blade of grass, then some weed seed probably, then some more worms or a bug; by far the greater proportion of their first few day's rations, is animated. Another theory I wanted to knock in the head is "feed little and often." You often see this, even at this late date. I used to do this "every two hours." I took my dish of "bread soaked in milk and squeezed dry" or "hard boiled eggs crumbled fine, shell and all" johnny

cakes, etc., and fed "a little" going the rounds, until when I was through it was "time to start over again" feet aching, and all tired out. Notwithstanding all this, my little pets would get bowel trouble. The little wings would droop, the birds would get "pasted up" "go around on stilts" a few days crying "cuddle me, cuddle me, cuddle me," then death would end their sorrows—but not mine. By the way, observation has taught me to believe there are two prime causes of this "pasting up" business; one is chilling the other is feeding too soon "pasty" food, such as eggs, bread and milk, etc., and especially oats. Since getting a brooder—not a death box—and starting chicks on dry corn, etc., I have none of this trouble. After about two weeks I have good success feeding hard-boiled eggs (as a relish). From three to four weeks, one of the best of feeds is hulled oats, and I can raise fine birds on them and the cracked corn, with beef scraps and the milk to drink, although I like a good mixed scratching of growing feed better, (I sift it early and give them the finer portions, after too large for the nursery food.) When about six weeks old they can take the regular scratch feed entire, and I can recommend the Model. I can conceive of no better ration than this, supplemented with hulled oats as complete grain food, and with separate boxes of good bran, beef scrap, charcoal, grit and shell, or better yet cracked bone, (although this brand of beef scrap contains considerable of this), if on free range of grass with protection from cold and storms, or if in summer, from hot sun, chicks certainly should do their best. Remember to keep the brooder itself shaded during most of the day in summer. Keep the food before the chicks all the time, and they will grow.

and vitality). 5th. It must have an exercising or feeding room, of sufficient size to accommodate the little boarders, for at least the first few days, where the dry grain should be scattered in litter—preferably chaff or cut clover. They soon learn to work in this, which gives them needed exercise and keeps them (like human workers) contented. 6th. It must be well lighted, especially in exercising room, and hover also should have plenty of light, as they will then more readily learn to go in when cold. 7th. It should have low entrance to show the tiny babes the way to warmth, without too much time and trouble on the caretaker's part. (If the "wooden mother" could only give the call for shelter and protection, we could wish for no more!) I think the lamp under hover the best arrangement, as it saves in oil, and helps to warm the entire floor, and also saves space. For several reasons, hot air is better than hot water, for brooder heating. If outdoor brooder, the entire roof must, of course, be rain proof. The first I had, had one side hinged part way down, with consequent leaking unless covered.

I think the new style colony brooders much superior to hinged roof. The superiority of the side-door style over the hinged roof opening, is very apparent upon a moment's consideration. One of the foremost essentials of a good brooder is easy access for cleaning. It must be kept sweet and clean, or the inhabitants cannot thrive. The hover floor should be well covered with some absorbent, and I have found, here also, dry earth to be the best of anything. The little ones imbibe strength from Mother Earth, here, while sleeping or resting. The same as they did in embryo, in the warm, moist, and old weather, I have found, here also, dry earth to be the best of anything. The little ones imbibe strength from Mother Earth, here, while sleeping or resting. The same as they did in embryo, in the warm, moist, and old weather, I have found, here also, dry earth to be the best of anything.

will. If I could succeed in hatching artificially as well as rearing the hatched birds, I should be able to more nearly supply the demand for "Ideal" Silver Wyandottes. But when I get a more suitable place to run incubator I expect to do much better with that.

I am going to "take the bull by the horns" this time, and say the brooders I am now so successfully using are the old style Star. I was literally "swamped" with inquiries after my article was printed in January, and while I like to be helpful in any way possible, and am in full sympathy with enquirers, still my time is more than taken up, so for the sake of any others wishing like information, I give the name of my choice of brooders, brand of feed, etc., as experience has made me wise." I can recommend these, as I know they are O. K., but I doubt not there are others as good. I know there are others that can produce good results, but having the "proof" of these, I can speak with decision, and mention them solely for the sake of helping those who are unable to decide for themselves.

RADFORD'S REPLY.

Editor American Fancier:

I have just noticed "Schillings' Story," in your issue of April 14th. In regard to this matter my explanation will be very short. But before beginning it I would like to call your attention to a few facts concerning the controversy itself. Mr. Schilling says, "I have written Mr. Radford several times regarding this matter but he has failed to reply." This statement is not true. My first letter from Mr. Schilling regarding this matter was dated March 12th. I replied to this at some length on the 14th, and know that my reply was received, for I received a few days later a letter from Mr. Schilling in answer to same, which was a receipt of my

chased every bird that he owned. course, although I purchased the entire flock, I realized that some individual birds were sold before I purchased them. Undoubtedly the Messrs. Schilling have sold numerous birds during the past few years and it is very natural that such are not included in the sale to me even though I did purchase the entire flock. If I cannot advertise having purchased all the Schilling Buff Cochin Bantams (i. e. the entire flock) it certainly seems to me that no flock has ever been bought entire nor could such a transaction ever have been advertised.

Now if I had advertised buying the entire flock of birds including all the Boston, New York and Hagerstown winners I probably would not be blameless. But I did nothing of the sort. I simply made a general assertion concerning the winnings of a flock of birds just as the Messrs. Schilling would have done had they retained the birds. My claim of "Winners at Boston, New York, Hagerstown and other leading shows" is so general that it can work no harm to any person who may have bought individual winners at any one of these shows. The firm of Schilling & Prager now takes advertising space in The American Fancier for the first time and I am sure there is nothing contradictory in their ad and mine. Why then should they be so anxious to pick a flaw in my advertisement? Do they expect me to use my space for advertising their stock? To me it seems that the place for them to make known their winnings is their own advertising space. As I wrote Mr. Drevenstedt, this impresses me as being a tempest in a teapot and it certainly is such a puerile controversy that I almost feel ashamed to take part. In regard to winning it is enough to say that I HAVE Boston and Hagerstown Winners. The Schilling Buffs have won on numerous occasions at New York and as I purchased the flock I have a right to advertise these winners. Mr.

Agriculture OR Field & Garden

Cultivation of Strawberries.

The following instructions for handling strawberry plants from the time they are received from the nursery until they come into bearing, are in accordance with the best methods of successful fruit growers, says Epitomist:

If possible you should have your ground ready for planting when the plants are received from the nursery, but if the ground is not ready they should be set temporarily in rows about two inches thick and four inches of dirt between the rows.

You will find that the sooner the plants are set the better the growth they will make, and those set as soon as received from the nursery will require less pains to get them to grow.

The ground should be thoroughly worked and leveled. The rows should be marked with something light so as not to ridge the ground. The rows should be thirty inches apart and the plants sixteen inches apart in the rows.

A hoe with a handle ten to twelve inches long should be used in setting the plants. Stick the corner of the hoe in the ground and draw the dirt slightly, place the plant in the hole and press the ground around it with the hand.

In setting when the ground is moist this need not be done as particularly as when it is dry. When the soil is in right condition one should set from 8,000 to 10,000 plants a day.

The plants should be cultivated at least four times the first season and the weeds kept hoed out, but when hoeing do not dig too much around the plants.

The runners should be cut about two weeks after the strawberry season is over and again in about six weeks.

The plants should be well cultivated and all weeds hoed out before laying them by for winter.

In the spring they should be cultivated as soon as the ground will do to work and again about the time they begin to bud or bloom. A fine-toothed cultivator should be used in the spring, and when hoeing be sure not to cut the roots, as it will put them back, making the crop late.

If these instructions are followed, you will be surprised with the growth of your plants and the size and quality of berries. Cultivated in this way on good soil, one acre should yield about 2,500 quarts.

Agricultural Knowledge

The ambitious young man who has a natural inclination for agriculture should acquire all the useful knowledge possible about his prospective profession, says Rural Home. Theoretical knowledge taught in the colleges is usually a digest of actual experiments and shows a young man how to proceed in all the various lines of agriculture. The young man intending to devote his life to business or one of the skilled professions seeks business education or serves an apprenticeship to the trade. The young man who is a student in agricultural

knowledge and has had some practical farm experience will command a higher salary than the city clerk.

Many wealthy men own farms and operate them from a sentiment or for a retreat from the business cares of the commercial world. They need a foreman or general manager and are always ready to engage a competent young man who is well posted on up-to-date agricultural methods. The well informed, efficient young man will always command higher wages on the farm than the unskilled employee. Not only increased wages, but the ambition and prospect of ownership of a farm should stimulate young men to seek higher agricultural information.

Finding Out What Pays.

It is not only important for a farmer to know whether, upon the whole, he is losing or gaining, but it is, if anything, more important for him to know at what point he is losing or gaining, that he may cut off those things which do not pay, and stress those which pay best. Is he a cotton raiser? If so, does it pay him to raise cotton in the way he has been doing it? Does it pay him to use fertilizers on cotton? Does the rotation of crops he now follows pay best? Does it pay better to raise or buy stock, to raise hogs or buy bacon; to keep ten head of cattle or half that number? Would some other money crop pay better on his farm than cotton? These and dozens of other like questions he may ask himself, and study to very great advantage. Some of these he may answer pretty satisfactorily from his individual experiments only. Don't conclude that since the government has established experiment stations there is no need of farmers to making experiments. The stations make experiments to establish general principles; the farmer should experiment to ascertain how best to apply those principles to his individual farm. Every farm has something peculiar to itself which calls for special treatment. But experiments teach little unless full, systematic record is kept. Experience loses much of its value in the absence of records. One cannot trust to his memory alone; last impressions always overshadow and dominate those that are older.—Southern Cultivator.

DATES CLAIMED.

Under this heading there will appear each week a list of all the shows claiming dates for the coming season. Secretaries of poultry, pigeon and pet stock exhibitions will confer a favor by sending in the dates selected as promptly as possible. It is not only a convenience and guide to secretaries of shows that have not selected their dates, but of great interest to readers of The American Fancier, a majority of whom are exhibitors.

The name of secretary and judges will be appreciated when sending in notices.

Aug. 21-24—Cortlandt, N. Y. Cortlandt County Agricultural Society, W. J. Greenman, Secretary.
October 2-5, Chatham, N. Y. Columbia County Agricultural Society, W. A. Dardess, Secretary.
Nov. 12-17—Houston, Tex., Howey S. Fox, Jr., Secretary.
Nov. 12-17, San Jose, Cal. Santa Clara Valley Poultry and Pet Stock Association, E. Van Every, Secretary, Edenvale, Cal.

Northwest Fairs.

Sept. 17-22, North Yakima, Wash. State Fair, G. A. Graham, Secretary; Harry H. Collier, Superintendent Poultry.
Sept. 24-29, Spokane, Wash. Inter-State Fair, Robt. H. Cosgrove, Secretary.

It is generally conceded that the deep colored yolk contains a greater amount of vital property than the pale yolk, yet the barnstorming actor never notices the difference when eggs are coming his way.

A WISE HEN.

"Do shut up your noisy head!" The mistress to a pullet said.
"Caderk! Caderk!" the hen replies;
"Pray tell me, madam, do, I beg,
How you would know I'd laid an egg
If I did not advertise?"

Weed's Wanderings

Our first visit is to the yards of A. L. Bonfoey, White Rocks. Pen after pen are here to be seen. Mr. Bonfoey does not cater to the egg trade, but prefers to sell stock, believing that it is more satisfactory to both seller and buyer.

We next take in Bristol, and visit the Home of W. H. Card. We found "Wid" about as fat as ever. He and his good wife were very busy with a large lot of young. Mr. Card's success is due to a great extent to the help of his other nineteen twentieths. Mr. Card tells us that he is going to give a chicken talk at Collinsville the same night, so we make up our mind that we will hear "Wid" spout, and arrive in Collinsville in time for the talk.

That Mr. Card did himself proud, there is no question, and while we did not agree with him in all things, still Mr. Card certainly gave them a good practical talk, and gave the club the benefit of his thirty years experience in a good, straightforward way, that carried conviction with every word. Here we had the pleasure of meeting C. M. Maxfield, whose father, some of us old timers remember as a judge at Winsted and other places. Mr. Maxfield, Jr., reports a nice lot of chicks.

Mr. H. T. Reynolds, Secretary of Farmington Valley Poultry and Pigeon Association, reports his Black Minorcas in fine shape and doing fine.

At Plainfield, we had the pleasure of meeting Mr. E. S. Freeman and his White Cochins and Indian Games, but what interested us most of all was his universal regulator for incubators. We do not hesitate to say that it is in our estimation the best improvement and help in artificial incubation that we have ever come in contact with. I predict a great future for the universal regulator.

Did you ever visit the yards of Geo. W. Mitchell?

If you did you certainly came away with the conviction that you had seen the greatest Partridge Cochin Specialist in America, if not in the world. Mr. Anderson, not to be outdone by his employer, has a fine lot of White Cochins, that prove their quality whenever shown.

From Bristol to Torrington is not so far, and there we renew acquaintances with Lewis Hull and Charles Cook, old time subscribers to The American Fancier, who gladly renew; thence to Fernwood Farm, we find Mr. Putnam, Superintendent of the same, a very busy man. He not only has this large farm with its several departments to superintend, but is also officer in several Associations pertaining to agriculture, horticulture, etc. Mr. Putnam takes us to the new farm of Mr. L. A. Ripley, who was some fifteen hundred White Leghorn chicks being raised under a new Colony brooder system that seems to be doing fine work. I think it will be a pleasure to visit Mr. Ripley's yards later.

Geo W Weed

Shull's Saunterings

Charles E. Dalton is a White Rock breeder at Auburn. He has four pens that show quality of no mean kind. They are good large white birds, with true Rock shape, and a credit to any breeder. Mr. Dalton has shown his birds at Rochester and Auburn, and done his full share of winning.

* * *

Seim & Barsch is an Auburn firm that reported everything on the boom. They breed Black Spanish, Rose Comb and Single Comb White Leghorns, and Black Tailed Japanese Bantams. The firm has been doing business for several years, and have done considerable in the way of exhibiting. They won ten firsts, seven seconds, four thirds, one fourth and one fifth at the last Auburn show.

* * *

Gardner & Dunning, of Auburn, have a great collection of B. P. Rocks. Here are gathered together all of their famous winners of this and previous years. If one was given his choice, he would find it a hard one to select. Their second prize hen at the New York Show has done twenty-one eggs in twenty-three days, and was at business when I saw her.

* * *

Philo B. Adams is another Auburn breeder of White Rocks, and has a very promising flock of this well known variety, and will undoubtedly be heard from at the next Auburn show.

* * *

John H. Scott, at Auburn, showed me as fine a lot of Buff Wyandottes as one could wish to see. Fine in color, shape and size, with good combs, and, in fact, it would be hard work to know where to begin to find fault. Mr. Scott has shown at most of the leading shows, New York included, and has always got his share when it came to a division of the blue ribbons. He keeps a trap-nest record of his birds and can show something good in the way of records.

* * *

A. E. Pierce, an Auburn Buff Orpington breeder, has a fine lot of this grand variety, and will have some good ones for the next show season.

* * *

Arthur Sinspaugh, of Ithaca, N. Y., is a young pigeon fancier who is coming into prominence with his fine line of fancy pigeons. He has been exhibiting at a great many of the best shows and fairs for the last year, and has carried off his share of honors in the very best of company. He breeds Fantails, Runts, Jacobins, Tumblers, Magpies, Dragoons, Homers and Helmits.

* * *

While at Utica I called on an old acquaintance, Dr. C. S. Crandall, 12 Steuben Park, a breeder of Barred Rocks, and most of the varieties of Bantams. The Doctor reported things looking up quite brisk for the spring trade. His birds did a lot of winning for him the last show season, he having shown at Madison Square, Schenectady and Auburn, and gathering in many ribbons of the desired color.

* * *

Hovey & Fairbanks, of Utica, is an-

other firm who are coming to the front in Buff Leghorns and Barred Rocks. They showed a few at New York, and their Buff cockerel won second and color special; their winning at Auburn being first cock, first cockerel, first pullet, and second pen young. Dr. Fairbanks, the junior member of the firm is quite an enthusiastic B. B. Red Game man. He has a pen of fine color and shape that he showed at Madison Square, winning second and third pullet on an entry of three birds.

* * *

At North Clinton avenue, Johnstown, N. Y., while visiting the plant of John C. Rice, I saw some as good Barred Rocks as it has been my privilege of seeing for a long time. Mr. Rice is breeding Bradley Brothers strain direct, having in his pen quite a few birds bought at a long price from these well known breeders. He has exhibited at Boston, Albany, Rochester, Johnstown and Gloversville, where his birds held their own in the best of company. Mr. Rice is a man of the square deal variety, all wool and a yard wide.

* * *

Samuel R. Davenport, of Albany, N. Y., the White Wyandotte specialist, has six magnificent pens mated this spring. Among the birds may be seen over twenty prize winners of the past winter, including birds that won at Madison Square Garden. He is now preparing to raise a large number of his white beauties, and will no doubt be heard from again next year at the shows.

* * *

After getting through with Mr. Davenport, I started for Loudenville to see the McEwan's Farm. I took the auto bus that runs out near the farm. The day was not the finest that ever has been, so I was not delighted to be told that the boss was indisposed, and when I asked for the poultryman to be told that he could not be seen. Then I hiked back a distance of two and a quarter miles to take the electric car for Troy.

* * *

Arriving at Troy, I called on Warren T. Lord. I found him at his desk in the City National Bank, where he told me of his world famous Buff Wyandottes. His best mated pen is headed by the one hundred dollar challenge cup winner at Boston, having six very fine hens in his company, among them being his Chicago and World's Fair winners. In Pen No. 2 are ten solid Buff pullets, headed by first Chicago cockerel.

* * *

While on the way to Auburn I visited several places en route. I went five miles by lumber wagon, over a road, or rather through a road covered with mud about a foot deep, and then didn't catch my man. I also visited Mr. Mills, the Rose Hill seed grower, who was very busy fixing things up for the seeding season.

* * *

At the plant of Mr. A. S. White, at Fayetteville, I saw a finely arranged system, if you please, for breeding and housing fancy poultry, the best one I have looked at for a long time.

Mr. White keeps Buff Orpingtons, Barred Rocks, Buff and Partridge Cochins, and has some nice stock in all varieties.

* * *

Stopping in Syracuse, I called at the hardware store of Johnson & Butler, to see my old friend, Mr. Butler, but, unfortunately, I did not meet him.

* * *

Mr. W. H. Brundenthal, with the Central City Engraving Company, corner of State and Water streets, whose yards are located on West Brighton avenue, Syracuse, has some very nice White Wyandottes and Brown and White Leghorns.

* * *

Through the courtesy of Mr. William T. Liddell, I was enabled to see the new plant of Mr. J. E. Blandy, located on his farm about three miles from Greenwich. They have a new brooder house one hundred feet long, by fourteen feet wide, divided into nine compartments. At present it has a gravel floor only, which, if I was to pass opinion, I would say that it would be much better with a good board or plank floor, with hayseed, fine gravel and earth to cover. However, it is as finely constructed a building for the purpose as one sees in a good long saunter. They have a breeding house forty by eighteen feet, where they keep the great laying strain of Rose Comb Rhode Island Reds, among which one could pick out specimens good enough for the king. There is also another large house on the place, which is given up to a mixed lot of chickens for eggs. These will be replaced by Rhode Island Reds as soon as possible, as I understand W. H. Weller, Mr. Blandy's poultryman. There is a fine large barn on the premises, in which is housed a grand herd of thoroughbred cattle. Near the barn is located the dairy, built according to the latest ideas, and equipped with all modern machinery.

* * *

At Norwich, N. Y., I called at the poultry farm of Mr. S. E. Smith, J. E. Mapes being the manager. Here I saw as fine a collection of Single Comb White Leghorns as has ever been my lot to see. They were of the right size, clear white in plumage, and were certainly a picture to look upon. Mr. Mapes says that there are about nine hundred birds on the farm, and the layers have been very prolific. This farm enjoys a nice fancy trade in eggs and fowls, and recently shipped a large consignment to Sweden, where they arrived in good shape and gave great satisfaction. At Frankfort, N. Y., birds from this farm took first cock and second hen, first and fourth cockerel, first and second pullet, and first pen. The first prize cockerel also won special for best bird in show, special for whitest bird in show, special for best bird in Mediterranean classes and special for best cockerel in show.

* * *

Mr. Newton Adams, of Utica, is an old-time breeder of those old-time favorites, Dark Brahmas. He has quite a few of these grand, good birds, and occasionally exhibits at Madison Square, but he is not doing much in the way of pushing them, as his time is almost wholly taken up by his ever increasing business.

* * *

The first fancier I called upon in Albany was that genial fancier and breeder of Fantail pigeons, Dr. John

Hurdis, of No. 15 North Pearl street. The Doctor has birds all mated for the season, and is expecting great results. Incidentally he hopes to have something good for the next show season, and will surely surprise the boys. Dr. Hurdis is treasurer of the Albany Fanciers' Association and devotes himself to all varieties of Fantails, and he has some crackerjacks in his lofts, and is always pleased to show them to visiting fanciers.

JOSEPH L. SHULL.

New York the Place.

Editor American Fancier:

The matter of the next meeting of the American Poultry Association has been of some interest to me, and I could not but wonder at the inconsistencies of the arguments in favor of a city like Auburn. The main argument being that the Association should be held in a smaller place so that the members might have more time to attend the meeting, this being the principal argument against New York, yet it is conceded that a place like Auburn usually has a show of two thousand specimens or more, but if they have the A. P. A. Meeting, it will enlarge the entry, and this is why the Association has been asked to meet with them.

Now supposing, for instance, they are about to increase their entry fifty per cent, and they certainly ought to do that, it will give them a show of three to four thousand birds. Now then, you have a show that is nearly two thirds as large as New York as far as the poultry paper is concerned, without as good an accommodation to care for the visiting poultry men, without the interest taken in the exhibition that there is at Madison Square Garden, which annually calls out thousands of breeders each year, and which would give an opportunity for this multitude of visiting poultrymen to join the Association, making the Association an attraction by having a handsome booth fixed up with some literature, the new membership certificates and Standard.

It seems to me that it is due to Madison Square Garden to have the A. P. A. meet at that exhibit in the near future, and I hope that the members of the executive committee may see this in the same light.

I have written nothing that I am ashamed to put my name to, but being of minor importance in the Association, will merely subscribe myself as "G."

Give the chicks plenty of air. This don't mean to take them to the mountains or seashore, but it is just as necessary for chicks to have pure air as it is for the breeder.

Chicks should begin to pip on the twentieth day that eggs are in the incubator. If they come out before, the temperature has been too high. If over, the temperature has been too low.

Eggs should be collected off the nests at least twice a day now that broody hens are having their innings. Eggs left in the nest three or four weeks usually become chicks or give a bad flavor to the pastry.

FOWL HITS.

The price of eggs is rising fast. The day of luxury is past. Bacon alone is far from nice. But eggs are such an awful 1 Egg-shell-stir!

Guinea Fowls

(Mid-England in Feathered Life.)

At the commencement of the year every farmer pays some little attention to his poultry, and now, if at any time, he takes into consideration the desirability or otherwise of extending his programme. Many farmers will be turning over in their minds, now at the present time, the subject of keeping geese or turkeys or something besides ordinary poultry; and I should like to be able to put in a word with such farmers on behalf of the Guinea fowl, for it is undoubtedly a profitable bird to keep under suitable circumstances. There is no doubt whatever—and I should be the last to question it—as to the undesirability of doing too much in this way; and particularly is it undesirable to mix up too many kinds of poultry-keeping on the same farm. The old-established method of having turkeys, ducks, geese, Guinea fowls, and a stray pea-fowl or two all mixed up together with the farmyard poultry, and all roosting in the same barn, has been proved a failure. In point of fact, even where turkeys are kept, it is desirable that they should be accommodated right away from the ordinary poultry. The same applies to ducks. We may, however, make some exception to the rule, and if we do make an exception it should be in favour of the Guinea fowl which might well be kept by every farmer who has plenty of land. The only objection to Guinea fowls is to be found in their wandering propensities, about which I shall say something presently. Speaking generally, however, the Guinea fowl does deserve to be more extensively kept than it is at the present time, for although it does not pay as a layer, still it pays very well for market purposes. The eggs are very small, but they are very rich flavoured and high in favour as table delicacies. Moreover, the Guinea fowl only lays in the spring of the year and is unproductive altogether during the latter part of the season; but dead Guinea fowls will always fetch a good price in the market. This, of course, involves rather late hatching and keep during the winter; but the Guinea fowl does not cost as much to keep as an ordinary fowl, for reasons which will now be apparent.

Guinea fowls are very difficult to keep within bounds, as they have a habit of wandering off into the fields, and cannot be taught that it is contrary to good morals to trespass upon the plantations of other people. They live, so to speak, in a half-wild state, and their preference is to roost on the most inaccessible branches of the highest trees they can find. For this reason they are cultivated by some farmers as watch-dogs, being very sharp, and sleeping, as it were, with both eyes open. Any intruder, however stealthily he may come, be it upon two legs or upon four, will be sure of detection, and there will be a

screaming from the heights, which will never fail to be heard by the whole district round; if there be several colonies of Guinea fowls in the neighbourhood the whole place will soon be awake. Now, the Guinea fowl has another interesting habit, and that is, that it makes its nest in places difficult to find, although sometimes it will be obliging and come and lay in the hen-roost. As a rule, however, it is situated in some hedge-bottom; and for this reason Guinea fowls need to be watched and their nesting-places discovered. Any attempt to keep them in confinement, even though it be limited confinement, would probably end in failure, because the Guinea fowl, like the wild pheasant, is insectivorous, and requires plenty of range, in order that it may obtain the insect food which constitutes its principal diet.

The farmer who wants to start keeping Guinea fowl will find it best to get one or two sittings of eggs, and hatch these out under common hens. To try to start by buying full-grown birds is useless, for they are so wild and peculiar in their ways that if they are turned out upon a strange farm they will probably make off altogether. They have often been known to take to the woods and become quite wild; and in this connection it may be mentioned that in some parts, particularly in South Africa, Guinea fowls are said to have been turned down to breed in a wild state like pheasants, although they are not so good as pheasants for sporting purposes, because they run along the ground instead of getting up into the air to be fired at. Being of a quarrelsome nature Guinea fowls could not be cultivated in the wild state in the same coverts with pheasants, for the pugnacity of the Guinea fowl would soon terminate the career of the pheasant. This pugnacity is one of the objections which can be raised to them as tenants of the farmyard, although it is an objection which fails where they are not obliged to mix up with the poultry on a farm where there is plenty of range for both.

With regard to hatching out the eggs, which I recommend the farmer to purchase in order to make a start, it may be said that the period of incubation is about twenty-seven days, and when they are hatched out the little Guinea chicks may be dealt with much in the same way as ordinary chickens, being fed upon the same foods, with this exception—that they require something to take the place of their natural insect food, the best thing to give them for this purpose being an extra supply of granulated lean meat, either fresh or dried. The lean-meat shred which is advertised by several firms is good for that purpose. They will need to be reared, of course, in confinement up to a certain stage and then they may be allowed

to roam out, and they will very soon leave the hen and make tracks of their own. They are not by any means delicate; in fact, they are easier to rear than pheasants by far, and farmers need not be afraid of their delicate appearance, for when they are first hatched they look very fragile indeed. Above all things take care that they are not hatched out too early in the year, because cold, snowy weather does not suit them at all, and the sooner they can be got out into the open the better; and, until they can, the greatest care should be taken to see that they are not overcrowded or kept in dirty coops.

In the wild state Guinea fowls pair off, but in domestication it is usual to keep one male bird and two or three hens. They lay freely during the egg period, and such a breeding pen as this will produce enough eggs to enable the farmer to hatch out quite a large flock of young birds for the market. At the end of the year the entire stock can be disposed of, with the exception of the few which it is intended to keep for breeding purposes during the ensuing season. It is not easy to distinguish the sexes, and a little practice is necessary; but, generally speaking, the male is the larger bird, and he has longer wattles than the female. There is no particular preference for any variety, but on the whole the ordinary speckled Guinea fowl is the bird which can be recommended to be kept. The adult birds may be fed in the morning with meal like ordinary poultry, and they will not require any further attention in the way of food until night when they should be fed liberally with oats.

Ventilation.

Under this head comes one of our hardest problems to solve, and this question means so much for success to all poultrymen. After about 11 years experience with all methods of ventilation, and all of them failed to give the results desired, I have now what seems to be doing the business very nicely for me. That is by tacking about eight ounce duck or heavy muslin on the joist instead of straw. I put the joist just high enough so you can walk completely under it, and have good large air space above, also a window in each end, hung on a swivel, so you can tilt the window to your desire as to condition of weather.

I like this system much better than muslin windows, as they have a tendency to make the building dark and dismal, and does not let the bright sun rays in, which is one of the best tonics we have for cheerfulness and health, for the productive hen must be a cheerful and healthy one. The trouble I find with straw, it is continually littering down, and it furnishes a nesting place for rats and mice and other vermin; also absorbs all the dampness and holds it until its odor becomes very offensive. The duck is always clean to be in under, also much easier to thoroughly disinfect, as the duck readily absorbs the disinfectant throughout, with the straw you merely disinfect the bottom. A good disinfectant can be made of kerosene and oil of tar and carbolic acid.

C. H. YAPLE.

TRIAL SUBSCRIPTION—Send twenty-five cents and we will send The American Fancier for thirteen weeks to one address.

NEW YORK MARKET REPORT.

EGGS—The following classifications will hereafter govern all transactions on the New York Mercantile Exchange:

Extras—Free from dirty eggs; good, uniform size; 90 per cent fresh, reasonably full, strong bodied; 1 doz maximum loss.

Extra Firsts—Reasonably clean and of good average size; 85 per cent fresh, reasonably full, strong bodied; 1 doz maximum loss.

Firsts—Reasonably clean and of good average size; 65 per cent fresh, reasonably full, strong bodied; 2 doz maximum loss.

Seconds—Reasonably clean and of fair average size; 50 per cent fresh, reasonably full; 3 doz maximum loss.

All must be in new cases of good quality, smooth and clean, with sweet, dry, substantial fillers with flats or suitable substitutes under bottoms and over tops.

When sold "storage packed" all grades must be in new, 30-dozen, whitewood cases, well seasoned, smooth, clean and substantial; fillers dry, sweet, medium or No. 1 with flats under bottom layers and over tops; packing sweet, dry, excelsior unless otherwise specified. Storage packed extras must not exceed 12, or firsts 18 checked eggs to the case.

Receipts for the week, 169,972 cases.

A Weekly Journal Devoted to Standardbred Stock.

Application made for second-class rates at the Post Office at Ossining, N. Y.

J. H. DREVENSTEDT, Editor.

SUBSCRIPTIONS.

Subscription, \$1.00 per year.
Foreign subscription, \$1.50 per year.
All subscriptions payable in advance.

NOTICE TO SUBSCRIBERS.

Subscribers will be notified when their subscription expires. If a subscriber wishes his subscription to the paper to be continued he must so notify this office and send the amount in payment for the same, otherwise the subscription will be discontinued.

IMPORTANT NOTICE.

All matter, advertising or otherwise, must reach The American Fancier, Ossining, N. Y., or 26 Cortlandt Street, New York City, not later than Monday afternoon of the week in which the same is to appear.

ADVERTISING.

The advertising rate in The American Fancier is fifty cents per inch for each insertion. Five per cent. discount for payment in advance for six months insertions, and ten per cent. for payment in advance for one year's insertion.

CLASSIFIED AD RATES.

Forty-two words or less one time fifty cents; three times, \$1.00; thirteen times, \$4.00; twenty-six times, \$6.00; fifty-two times, \$12.00. Additional words at the rate of two cents each for one insertion, or one cent each for each insertion when run thirteen times. PAYABLE IN ADVANCE.

Did anybody whisper that the American Poultry Association is to be incorporated? The rape of the Orpington Standard should be a pretty severe lesson, but will the old society ever learn or benefit by it? We know that some of the most loyal members and well-wishers of the A. P. A. have been anxious to see the latter placed on a firm business basis and this means it should be an incorporated body, that can do things to those that do it, when the occasion is at hand. It is to the credit of the American poultry press that it has stood loyally by the old association and did not appropriate any of the descriptions of breeds in the new Standard of Perfection, when it could have been done time and time again. The two exceptions to the rule furnish the best reason for protecting the Standard rights in the future.

What has become of that once famous Poultry Press Club, composed of opulent—more or less—publishers and erudite editors? Did we not hear of reforms that were to be made in conducting the reading and advertising columns of the poultry papers, or was it only a dream? Started at Buffalo several years ago and finally organized at Indianapolis a year or so later, it has been lost sight of. The poultry papers seem to look the same as they did before the big upheaval that was to be, and we are of the opinion that

business will be conducted by individual publishers as such, regardless of any co-operation with their brethren in the same field. Better place the bald organization in cold storage, or preserve in water glass until some wild-eyed reformer is ready to take it out and start another shiver up and down the backs of the advertising agents and grasping reading notice fiends.

Mr. J. H. Scott, Secretary of the Auburn Show, writes us that the dates of the latter have been finally decided upon as follows: January 7, 8, 9, 10, 11 and 12, 1907. Nine judges have been engaged up to date, but several more will be placed on the list and the latter, when completed, will be published in The American Fancier as soon as received.

Prof. William H. Card's Buff Laced Indian Games illustrated on another page of this issue are much better than the photo-engraving indicate. They are really fine bred and well marked birds and have the type.

Infertile eggs are subject of much discussion at this time of the year. We are in the midst of the hatching season and thousands of valuable eggs are being incubated under hens and in machines. Failures to hatch reasonable percentages of chickens from a setting of one hundred or more eggs are perhaps more numerous just now than the large percentages that come with later hatched eggs. The cause of infertility and the number of hens that should be placed with a male bird are two matters that occupy the poultry stage with all the lime-light effects.

Some years ago the late William Cook, originator of the Orpington, and one of the largest poultry raisers in the world, remarked: "In many places last year I knew of cases where there were thirty hens running with one

cock, and throughout the whole season they averaged ten chickens out of every thirteen set. I do not say that every one hatched out a strong chicken, but in most cases it did. I have known twenty hens, in many cases, where only one cock is running, breed as many chickens as thirty hens running with four cocks. In some cases there have been chickens out of every egg. If the cock is allowed to run with two hens it is very seldom many of the eggs are fertile. To test this, a poultry keeper should take two cocks hatched from the same parents, and put one to run with twelve hens and the other with four. Let both pens of birds have their liberty. The eggs should be set at the same time from both pens, and in nine cases out of ten there would be more chickens out of the eggs from the pen where the twelve hens were running than from that where there were only four. I found throughout the country that last year was a very bad one for poultry, and invariably where there were a good many hens running with one cock the results were better than where one cock was running with a few hens."

The above represents the opinion of one English expert. Here is another from "Hally," a well known practical fancier who has had much experience and who evidently does not take stock in Mr. Cook's theory, and places the blame where it usually belongs, viz.: injudicious feeding. He says: "In my opinion the most important condition for the fertilization of eggs has been omitted, viz.: condition of the birds. If the birds are kept in too high condition the greater number of the eggs will be infertile, some of the fertile eggs will have germs so weak as to perish a few days after the commencement of incubation, and, if the chickens be hatched, they will not be worth keeping. If the birds be in too poor condition, most of the eggs will be fertile, but the chicks of weak condition. If the birds be kept in breeding condition, that is neither too high nor too low, nearly all the eggs will be fertile and the chickens strong. Due allowance being made for life, vigor, weather, etc., it does not matter as regards fertilization whether five or twenty birds run with the male bird. To give a case in point. A young fancier had a pen of prize Buff Cochins, cockerel and five hens. He seated one hundred and twenty eggs and got only five chickens. I had cautioned him about overfeeding. I went to see the birds, and remarked: 'You have the birds in too high condition.' He replied: 'They are not fat, I have been very careful in the feeding.' 'All the same they are not in breeding condition or their eggs would be fertile. Cut their grub one-third and in ten days all the eggs will be fertile.' He did so. About a fortnight later I had a dozen eggs for a sitting. I had twelve strong chickens from the eggs; by regulating the quantity of food only, the change was produced. Anyone can prove it. Overfeed a pen of birds to a small extent, and infertile eggs will be the result. Cut the food, and fertile eggs will in from five to ten days be laid."

After reading the two above opinions we can go considerably further into this question in order to get at the true inwardness of this business. It seems that neither Mr. Cook nor Mr. "Hally" have gone to the bottom of this vital and very important question

and no absolute rule can be formulated from either one or the other, although "Hally" comes close enough when he advocates the amount of feeding hens should have to do their best in the fertility speciality. It may act as a general guide in most cases, but circumstances and environments are apt to smash such theories to smithereens. Laying down the law in hen culture is a pretty risky piece of business, as hen nature is not as easily understood as that of other domesticated animals, especially when fowls are kept in confinement.

Let us begin with Mr. Cook's ideas regarding the number of hens that should go with one male. To be frank, there is no infallible rule, not even an ordinary guess, as to what is the proper caper in this vexed problem. Breeds vary in plumage and shape as much as they do in reproductive-ness. We have seen two Leghorn males sufficient to place with one hundred hens and produce maximum results, and we have noticed that fertile eggs can be had from a pen that contains but one male and one female. Some fanciers who are very particular in establishing a line bred strain of exhibition birds producing strains often rely on a single pair of birds to produce the choice winners at the great shows. The vigor of the male in some breeds is the very factor in producing fertile eggs and strong chickens. With Leghorns and allied varieties, there is rarely an excuse for infertile eggs, provided proper conditions as to housing and feeding are observed. This will hold good with the American and Hamburg varieties. Asiatics as a rule require much more care in getting good hatching results and the number of females to one male is frequently of some importance and requires careful observation. But even Asiatics, under the strenuous open air culture, will respond nicely when the breeding season is at hand. Once start them in fine condition with the rugged health an outdoor life has given them, and little or no trouble will be experienced in getting fertile eggs, provided the feeding and housing is based on nature's laws and not on some of the pap that is frequently found in books written by persons who are usually long on fine spun theories and short on actual practical experience. In dealing with this problem it is well to start with the one real and vital little joker in the pack of cards that are played in the game of hen culture, and that is hardness. Breeding, speaking, a chicken is not a hot-house plant; on the contrary, it is, if properly bred an extremely hardy animal. That is why it does better, at least many varieties do, in cold climates, than in warm ones.

That there are notable exceptions in the one hundred and nine varieties of domesticated poultry is obvious. But these exceptions are more noticeable in Bantams than in their larger prototype. And there is a reason for this. In Games Bantams the Black Reds as a rule are pretty sure to produce high results in the hatching line, even under ordinary culture. Not so with the Red Pyle. The latter, if on free range and kept active and not allowed to get too fat will show a very large percentage of fertility, no matter what the number of hens may be that the male is with. Yet we have seen some of the poorest results in hatching Red Pyle

Game Bantam eggs, that we have or come across in any other field.

* * *

About three years ago, a pair of Red Pyle hens, mated with a related stag, having free range in a garden and on a lawn, with a hopper full of feed before them all the time, laid eggs that were invariably fertile. The following year some of the pullets from this mating, with the same vigorous male in the pen, their sire in fact, laid eggs that would not produce a chicken. The pullets were too fat, the long winter and close confinement making them more fit for the table than for breeding pen. Some became egg-bound and had to be assisted in delivering the egg. No amount of after treatment in the way of cutting down feed and allowing free range brought them back to a healthy breeding condition. It was too late. The same year two settings of

Red Pyle Game Bantam eggs, bought from a prominent breeder, failed to produce a single egg. Too much yarding, pampering, feeding, no doubt was the cause. Recently we had occasion to observe on the same place two distinctly different results. Out of a hundred or more Game Bantam eggs nearly all proved infertile when tested or the germs were very weak. These Bantams were well housed, in fact, too well, had plenty of feed and good care. Another lot having small runs and good housing and feeding, produced eggs that went to the hundred mark in fertility. The hens are lively and vigorous. These birds had a training of cold weather culture in New York State and while sheltered from the drafts and cold winds, were kept busy in the day time scratching in buckwheat hulls, and picking up different morsels of assorted grains. While in fine condition, they are active and should produce the goods in the way of strong, healthy chickens.

* * *

Now we come to a breed that is a puzzle to even the most experienced fanciers and breeders of the same, the beautiful and peerless Silver Sebright. How many good breeders of the latter could tell a tale of woe regarding the lack of fertility and vigor of chickens hatched of this variety! Most of the fanciers we have interviewed on the subject attribute this to the male bird. As our readers are well aware, the male is hen feathered and this fact seems to lead to the conclusion that a loss of reproductive qualities is traceable to this female attire. We are not prepared to accept this as correct, but do know that shrewd fanciers select the birds as breeders that approach as nearly as possible the masculine type in head and tail adjuncts in order to get the desired results. We should like to hear F. B. Zimmer on this question, as he has had more experience in breeding Sebrights than any other breeder in America.

* * *

We shall also be pleased to hear from readers of The American Fancier on the above subjects. Actual experience is what we are after, and reports on hatching, fertility, mating and feeding furnish mighty interesting and instructive reading. Brief notes will answer better than lengthy articles, as facts concisely stated make a more lasting impression than a long spun out essay. Later in the season we expect to publish some results obtained at the farm at Red Bank, especially incubators, brooders and fertility of

eggs. Supt. J. Frank Hiller is gathering some interesting data, which will prove of some value to beginners in artificial hatching and rearing. At the present time five different makes of incubators and six different styles and makes of brooders are being tested at The American Fancier's experimental farm. Although the season was rather late when operation began, enough has been left of it to get a line on the workings of the machines during the variable months of March and April. The latter certainly had a fine share of cold storage to work off between some of the sunny days, and the author of "Spring, Gentle Spring" is very much in ill favor at the present time. The lay of the hen has been high but the price of her fruit has been low. There was a big glut in the markets after Easter, even the choicest eggs getting down in the teens.

* * *

W. J. Stanton has removed from 56 Dey Street to new quarters at 246 Greenwich Street, New York City. The genial "Billy" has been a familiar figure at the old stand for many years, and many a chicken session has been held there. Nearly every chicken man, prominent and otherwise, has been at the little emporium, dubbed "The Chicken Rathskeller," at some time, and many made frequent pilgrimages and weekly visits. The building in Dey Street will be remodeled and occupied by a large manufacturing concern, so "Little Willy" had to skiddoo for new quarters. He was a busy man last week fixing up his new emporium, several trusty colored gentlemen of the real Kaffir brand putting on coats of lime wash to make everything sweet and clean for the chickens, pigeons and pet stock. The American Fancier wishes Mr. Stanton continued and increasing prosperity in his new abode, and trusts "the boys" will find the latter equally attractive and will while away some of the leisure hours and indulge in good old fashioned chicken talk.

John H. Sebright

Buff Leghorn Club Catalogue.

This Club has just issued a neat, well printed and illustrated 52-page catalogue, telling all about their favorite breed, and nothing but the good and bad points about the Buff Leghorn can be found in this book. It is worth 25 cents to any person who is just beginning in the poultry business, but will be mailed free to any person addressing Geo. S. Barnes, Sec., Battle Creek, Mich. If you are looking for some good fowl to add to your yards, the study of this catalogue will help you wonderfully. Buff Leghorns hatched in July will lay the following December, if given proper food and attention.

AN INCUBATOR 4,000 YEARS OLD.

It has been proved beyond a doubt that incubators were in successful operation among ancient Egyptians. These original hatching machines were about nine feet high, and were arranged with galleries for holding the eggs, which were heated from a central oven. Some 386 incubators have been discovered in Egypt.

TRIAL SUBSCRIPTION—Send twenty-five cents and we will send The American Fancier for thirteen weeks to one address.

Feeding oyster shell, or, rather, furnishing shell, may be a habit, on the whole a cheap one. A dollar expended in shell will last an ordinary flock a year. Those who use shell observe the pens laying the heaviest consume the most of it. Also, after a feed of grain, see the several hens walk up to the shell bin and lay in a stock. These people need no argument to convince them that they have a good thing.

Clean nests induce clean eggs, one depends on the other. Straw is the great universal hen bedquilt, but not absolutely necessary. Excelsior makes a very satisfactory substitute. An egg sent to market with a stained shell does not do the seller justice, or rather the seller is doing his reputation an injustice. Frequent gathering will keep many eggs from being soiled by the not immaculate feet of other hens.

A crate of eggs demands a considerable amount of time to be put in first-class shape for market, and it is the time consuming tasks that cannot be left or shirked, that is bound to drive the henman with ideas of large flocks crazy. Take my word for it, the moments required to perform certain parts of his so-called "light and pleasant work" will have to be cut in two or he will find twenty-four hours too short a day.

A henman whose flock of layers runs above a thousand, said to me recently, "I notice my eggs run larger at times than others. I sometimes think I have found the right food combination, only to find the same old thing repeated," which goes to prove that even so small a thing as a hen can bust most any theory.

Come at last! Here is a man who is willing to admit that his incubator does not do as well as the maker claimed, and that he is not able to hatch every fertile egg. A man, too, who is so painstaking and methodical that he counts every one of the thousands of eggs his hens lay, and yet cannot run his incubator so it will hatch above fifty per cent of fertile eggs. Now, if so careful a man is only partly successful, a lot of us fellows who are thankful to get our eggs shovelled into a basket without counting, and are able to raise one chick from every two eggs put in the incubator, ought to feel greatly encouraged with our partial success.

This same party has confessed his system of hatching with hens is not more successful, four hens bringing but twenty-two chicks from the nests, which is way below par. I do not fancy hen rearing myself, but resort to it when compelled to. I have a room about fourteen feet square to devote to setting hens, but hardly ever have more than two in it at a time. The more the merrier sounds nice, but a half dozen setting hens of the discontented order can make things so merry a cat fight is a tame comparison.

I am more inclined to trust things

to a hen who, on a nest of her own choosing, appears to mean business.

If other nests are handy for the layers and some method of covering the nest to discourage laying in with the setting hen is used, the result will be more satisfactory.

About the most pleasant sight I have noticed lately is three Light Brahma hens sitting in a row, two in one pen, one in another. Not one of them has broken an egg and the other hens have bothered them but very little.

Geo E Howell

FRUITS AS FOOD AND MEDICINE.

That fruit has many uses besides pleasing the taste is well known, but the exact properties of each kind are not so well understood by the consumers, and a few suggestions on the subject may not be amiss, says the Christian Work.

Fruit alone will not sustain life for any great length of time, but helps to furnish a variety in the diet.

It stimulates and improves appetite and digestion, relieves thirst and introduces water into the system, acts as a laxative or astringent, stimulates the kidneys and supplies the organic salts necessary to proper nutriment.

If the medicinal uses of fruit were understood and care taken to use the appropriate kinds much less medical treatment would be needed.

Among the laxatives are figs, prunes, dates, nectarines, oranges and mulberries.

The astringents are blackberries, dewberries, raspberries, pomegranates, quinces, pears, wild cherries, cranberries and medlars.

The kinds used for diuretics are grapes, black currants, peaches, prickly pears and whortleberries.

The refrigerants are red and white currants, gooseberries, lemons, limes and apples.

Apples are useful as a stomach sedative and will relieve nausea and even seasickness.

Grapes and raisins are nutritive and demulcent, making them excellent for the sick room.

It is sometimes difficult to keep raisins, figs and dates away from the inquisitive little ants and roaches, but this is easily accomplished by putting them in paper bags that have been well brushed over with strong borax water and dried before the fruit is put in. The little pests do not like the borax and will not gnaw through the sack when thus prepared.

A fig split open makes a good poultice for a boil. It is especially useful for gumboil. A split raisin is also good.

Lemons are very useful in health or sickness. Hot lemonade is one of the best remedies for an incipient cold. It is also excellent in case of biliousness. For malaria the "Roman cure" is prepared by cutting the ring and pulp of a lemon into a pint of water, then boiling until there is only a half pint. One teaspoonful is taken before each meal. This has cured obstinate cases when quinine failed.

Lemon syrup made by baking a lemon 20 minutes and then squeezing the juice upon half a cupful of sugar is excellent for hoarseness and to break up a cold.

TRIAL SUBSCRIPTION—Send twenty-five cents and we will send The American Fancier for thirteen weeks to one address.

PIGEON FANCY

EDITED BY H. M. POCKMAN

IMPORTED THIRD PALACE—SIRE OF MANY AMERICAN WINNERS

Since The American Fancier decided to add this department, we have been inundated with congratulations on our latest enterprise. It is absolutely impossible for us to either reply or publish the many letters we have received. We must, therefore, ask the many fanciers writing us to accept our heartfelt thanks. We shall endeavor in every possible way to bring about the success that so many wish us, and with your co-operation this can be attained.

* * *

The show reports, with criticisms, will be a prominent feature with this paper. As it is the only weekly published, this will enable us to give the awards promptly.

* * *

William J. Stanton, who for the past sixteen years has been doing business at No. 56 Dey street, has removed to his new quarters, No. 246 Greenwich street, New York City. Friend Stanton can furnish everything in the poultry and pigeon fancy, from squab breeders to exhibition carriers. When we called the other day he was busy shipping a large consignment to Cuba.

* * *

We understand quite a few pigeon fanciers are contemplating sending teams to the English Dairy and Crystal Palace Shows next Autumn. Wouldn't it be a good plan to all club together and procure the services of some experienced man to accompany them? The poultrymen are doing this and will probably send a big entry.

* * *

Mr. Muir's idea of taking the band numbers of all the prize winners is a most excellent plan. It would remedy a mistake which is sometimes made of awarding the prize to the right bird but the wrong pen number. Mr. Muir suggests a plan in the shape of a card system, printed in three columns, the first for pen numbers, second for the awards and third for band numbers. Exhibitors then showing more than one bird in a class would know which bird was awarded a certain premium. This plan would work to a nicety if the judges would fill out such cards. As it is, Secretary E. C. Duffy, of the American Pigeon Club, has his troubles in obtaining the band numbers of the first prize winners from the judges at the different exhibitions.

SEASONABLE HINTS.

Quite a few birds die in the shell each breeding season. This generally can be traced to weakness, the result of indifferent setting or from the want of proper moisture during incubation. At the time of hatching, the eighteenth day, if the eggs are broken a little, it will help save many a youngster. This should be done very carefully.

* * *

A very good idea is to very lightly sprinkle the eggs with warm water

Always use a fountain, unless you have running water in your lofts, as it keeps the water clean and pure. It is very essential to fill the fountains with fresh water every day, or twice a day, if convenient, in summer.

* * *

Have a bathing pan at least four inches deep in your aviary. As soon as all the birds have bathed, empty it so as to prevent them from drinking this water.

* * *

A loft 16x6x6 feet high will easily accommodate twenty-five pairs of birds. Fantails require floor space, not height, as they do very little flying. Therefore, the fancier with limited room at his command can make additional floors in his loft, leaving a passage three feet wide to walk in.

* * *

Sawdust, shavings or sand should always cover the floor. Sand makes a most excellent bottom for the aviary.

JUDGING AT BOSTON.

In these columns, last week, appeared Mr. Glasgow's letter regarding the judging, etc., at the recent Boston Show. The editorial appearing April 7th was incorrect regarding the Challenge Cup winner at the Palace. This bird was, as Mr. Glasgow said, not shown at New York, but was at Boston, together with five others in the young class. This class at the Boston Show was one of the best, if not the best class for quality and quantity we have ever seen. But to our mind it was not handled any too good. We were rather surprised to see the award go where it did. Although it was a

thinking, Fantails which would pass the winner under most judges.

We were indeed sorry to see in the report of the Boston Show Mr. Rutter's entry called lucky to be placed second in this class. This bird and the one before mentioned we considered the two best youngsters in the class.

As to the Challenge Cup winner at the Palace, we quite agree with Mr. Glasgow as to its condition, except the tail was not open in the center, as it has one of the best centers we have ever seen, but never thought for one moment this bird could win in the condition it was shown. But for size and shortness of leg it was away ahead of anything shown. The judge passed what we considered the best in the class, and did not give entire satisfaction, as Mr. Glasgow writes, although he did to some. Judging is a difficult task, especially such quality as was seen at Boston, and to judge one day is certainly enough to tax the nerves of most of us.

The judge probably does own as fine a collection of Blacks as there are in this country, and is a thorough fancier, but made, as we are likely to, mistakes.

H. M. Pockman

SQUAB INDUSTRY.

(By W. P.)

As an industry, squab-raising requires less capital, and less work in proportion to the return than any other business of similar character.

In the first place, experience has taught that the common pigeons of the streets and alleys are not only the healthiest and best breeders, but they also produce the best squabs, young birds that are easily fattened, and that are strong and hardy.

The high-priced and fancy breeds of pigeons, such as Pouters, Fantails, Tumblers, Dragoons, Carriers, etc., do not compare with Homer and Common pigeons for the purpose of squab production, so that at the outset the person who desires entering the business is relieved of the necessity of spending a large sum of money for fancy birds.

As for a place in which to breed pigeons, an extensive structure is not a necessity, the requisites being that the structure should be warm in winter and not too hot in summer, free from dampness, and, if possible, with a Southern exposure; also, that it should be free from rats and mice.

For this purpose, nothing is better than an empty garret, well provided with light, and floor covered with gravel. All cracks should be made tight in order to prevent draughts in winter time. This last condition is much to be desired, if squabs are to be raised in the winter season, which is the time they are rarest, and consequently bring the best prices.

The most interesting and important part of the business is at the time the young are hatched out. Unlike turkeys and chickens, feeding of the young pigeons is attended to by the parent birds, thus saving a great deal of trouble, which in chicken raising must be attended to. It seems that the pigeon has never reached that stage of thorough domestication where the young birds have to be fed artificially, but, like the wild birds of the forest, the pigeon is one of the few domestic fowls that attend to the feeding their young with what the squab

WELL KNOWN PIGEON FANCIERS.

Beginning from the left: George E. Rowland, "Cavy King," and prominent breeder of Fantails and Magpies; William J. Stanton, the popular judge; T. A. Havemeyer, Vice-President Eastern Fantail Club, one of the most successful Fantail breeders in America; H. Clements, known in "Fantail Alley" for the past twenty years; A. Hay, the champion Black exhibitor and breeder, who has bred the winners for the past five years in succession at New York.

during the last week of incubation, especially during a dry season.

* * *

When your birds seem to be out of condition a little lime water will do much toward bracing your stud.

* * *

At this time of the year the birds should be given plenty of outside exercise, whether at liberty or in the aviary. Remember to build your aviary as large as possible and always allow the birds to bathe there.

very fine bird, it was entirely too large to hold the premier position in such company. There are times when a judge has to give first to a certain bird, a trifle too large, owing to lack of quality in the class. This was not the case at Boston. In fact one could have picked five or six very small youngsters just full of quality. Mr. Rutter's second, and Mr. Rowland's medal winner at New York, which was placed at the head of the young cock class over the Boston winner, was, to our way of

raisers call "soft food," or "pigeon milk," until they are old enough to shift for themselves. Thus the troublesome part of the work of chicken raising is absent in pigeon culture.

The young birds begin to eat grain in about a week after they are hatched, and then it is that the squab-raiser should see to it that they are kept well stuffed with grain and never hungry. The parent birds cannot be depended on to look after the welfare of their progeny after the "soft food" period has passed. They have a curious habit of stuffing one and starving the other; fighting the starved one off and feeding its share to the favorite.

Sheep Hints.

Gradually throughout the country special laws are being enacted to protect sheep raisers from worthless dogs. County laws are not sufficient. State laws are necessary, then all commuters would be safe. Sheep are among the most useful as well as valuable farm animals. Farm Journal gives the following seasonable hints:

The sheep should be shorn early, to keep them from suffering from the heat.

They should be gotten on pasture early, so that the grass does not get to coarse and rank before they are turned out.

The sheep should be given hay in the barn in the morning and evening, in order to keep up the food supply and to prevent them from scouring, which is often caused by the quick changes from hay to grass.

Fences should be mended before the sheep are turned out. Then they can't break out on the grain or the meadow land.

Before the lambs are weaned, the sheep should be dipped and washed to rid them of lice and ticks and to clean the wool.

If they are not dipped, the ticks will go to the lambs, and then the lambs must be dipped, or they will run down. Thymo-cresol, or tobacco water, will be an effective dip.

The lamb is put into the dip and his head is kept out. A little dip can be applied to the head, but care must be taken not to get the dip into the eyes, nose or mouth.

The lambs can be castrated and docked when about two weeks old, there is then little loss of blood and the lambs are easily handled.

Loss of blood will be prevented, and flies and vermin kept off, by applying coal tar to the wound.

This time of the year count your sheep a number of times a day. If one is missing, hunt it up. May save you a sheep.

Is there any more distressed-looking creature than a half-starved sheep, with a poor scrawny lamb following her? Don't have any such on your farm.

In the spring, after they have been out in a hard storm, we have found nice sheep lying with their backs down a little hill, not able to get up alone, because of the weight of the wool and water in their fleeces. Watch them carefully nowadays, and, if possible, keep them in out of the hard storms.

When you sort over the apples and potatoes, remember the sheep. They will thank you for any such rarebits.

TRIAL SUBSCRIPTION—Send twenty-five cents and we will send The American Fancier for thirteen weeks to one address.

FARM NOTES.

A proper rotation of crops means improvement of soil fertility.

Remember good quality never comes from poor seeds.

Small farms well worked pay better than big ones poorly farmed.

There is a good deal of science mixed with to-day's farming.

Whitewash brightens and makes unsightly surroundings look neat and tidy.

Lime scattered around stables and in many other places improves the sanitary conditions.

In planting cabbage put in an extra number of plants so as to have plenty for the fowls during the winter.

Don't let the cattle out on pastures until there is a good grass growth established. Their hoofs early in the season do considerable damage by tramping the tender grass shoots.

Try sowing four quarts of pulverized nitrate of soda on the lawn this spring and see how it will make the grass grow.

Hurried preparation or work always means carelessness.

It is a well-paying investment in all branches of agriculture to do everything thoroughly.

Each year's farm results should show improvement. If such is not the case there is danger of rut existence.

Plenty of live stock on the farm is a constant source to help maintain soil fertility. The very best farms are those where there are plenty of live stock.

Some farmers believe the best way to sell farm products is to let them leave the farm on four feet.

Don't try to be a dairy farmer until you can make first-class butter and know how to feed the cows for profitable results; good butter always commands paying prices, and poor butter is always a rank price killer.

Co-operation in fruit growing in some sections has become an established success. Hamonton, N. J., Cobden, Ill., Pocomoke City, Md., and other places, are good examples of what may be accomplished on these lines.

Commercial raspberry growing is again coming to the front. Some years ago in western New York raspberries were grown by the acre for drying. The industry is becoming prominent in the vicinity of Hamonton, N. J.

A few hives of bees should be kept on every farm; they are little trouble, are useful in fertilizing many plants, and the honey is good to have when buckwheat cakes are ripe.

Mr. Hale, the peach king, of Georgia and Connecticut, reports the outlook for a big crop of peaches in his extensive Georgia orchards is very very promising.

Arbor day in all the States should be religiously observed on every farm and at every school. Forests are rapidly being destroyed, orchards are dying from San Jose scale and neglect. Plant fruit trees and ornamental trees. More attention should be given to the planting of nut trees.

It is alleged by those who should know that ninety-five per cent of the fertilizing matter of the food consumed by sheep is returned to the soil. If this is so, and we have no reason to doubt it, it pays to feed farm products to sheep. G. O. BROWN.

MOLES IN THE GARDEN.

Many gardens are so infested with moles, says a Maryland writer in the Practical Farmer, as to make it impossible to have a good stand of peas and other vegetables that are grown in straight drills, as the moles make their burrows up and down the rows in search of insects and destroy the young plants as soon as they are out of the ground. Being much annoyed by these troublesome pests and failing to exterminate them by traps, I almost gave up in despair of ever getting a good stand of peas until I tried the following plan, which has proved entirely successful, and for the first time for a number of years I now have a perfect stand of peas without a break in any of the rows, though the garden is still infested with moles. It is simply this: Instead of waiting, as is the custom, until peas are several inches high before sticking them, I now do it at the time of planting. After laying off the rows and sowing the seed I insert the sticks or brush along the rows about 4 or 5 inches apart and 6 inches in the ground, and then cover the seed. The points of the sticks are not placed in a straight line along the row, but in zigzag order. This entirely stops the moles from making their tracks along the drills; they may sometimes cross at right angles, but do but comparatively little harm. For beans or other vegetables in drills that do not require support, sticks 6 inches long inserted along the rows in the same manner as described above answer the same purpose.

Topdressing Pastures.

Not all farmers understand the benefit of top-dressing pastures with manure, says the New York Farmer. In many seasons it will double the yield. If not broken up, it will also increase the yield the following year. Benefits are two-fold. Plants are fed with readily available plant-food, and they are protected by the mulch-like covering the manure affords.

Top-dressing increases the root development of the grasses. This means that, when the pasture is broken, there is much more vegetable matter in the ground than there would otherwise be. This is just the kind of food that crops which follow need.

In its decay it furnishes them with food and moisture, and it aids in a wonderful manner the mechanical condition of the land. When pastures form a part of the regular rotations, why should they not thus be stimulated?

The squab industry in the South is yet in its infancy.

INTERNATIONAL ROSE COMB BLACK MINORCA CLUB.

The second annual meeting of the International Rose Comb Black Minorca Club was held at the Boston Poultry Show, January 18th, 1906, at 2:30 p. m. The following officers were elected:

President, R. E. Curtis, Rutland, Vt.; Vice-President, S. A. Rowland, Granville, N. Y.; Secretary-Treasurer, Geo. H. Northup, Raceville, N.Y.; Directors, Lewis H. Green, Picton, N. J.; Clarence J. Denton, Round Lake, N. Y.; James W. Cobb, Birmingham, Mich.; C. E. Coggeshall, Miles City, Mont.

The International Rose Comb Black Minorca Club was organized at the Boston Show, January, 1905, and has made greater progress than any other organization of its kind in the same length of time. The club now has in its membership the leading Rose Comb Black Minorca breeders in America and it is our object to interest all breeders of this variety in united action whereby we can bring out to the shows the best exhibits of Rose Comb Black Minorcas and thus acquaint the public with their sterling qualities. We hope also to work together to establish the best methods of breeding to improve our flocks and to assist those who have good birds to receive higher prices for surplus eggs and stock. The club will publish and distribute literature which will benefit members in many ways, and will offer many specials in various shows, so that they will be available for the greatest number possible of the club's members.

While yet less than one year old, the club has provided special ribbons and offered them to nearly one hundred show associations to be competed for in eighteen different States and in Canada, as follows: Massachusetts, Indiana, New Jersey, New Hampshire, New York, Wisconsin, Connecticut, Michigan, Vermont, Illinois, North Carolina, Kentucky, Montana, Pennsylvania, Ohio, California, Washington, Missouri, also District of Columbia and the provinces of Ontario and Nova Scotia, Canada. We hope that most of these States will have enough members a year from now to entitle them to have a silver cup from the club, for State competition by club members, and that all other States will be represented by sufficient members to entitle them to ribbons.

The financial report which was read and approved at the annual meeting showed a balance of \$10.99, after paying for the ribbons mentioned, \$29.00 in cash, special printing, and all other expenses for the year. Geo. H. Northup, Secretary of the club, gave personally a beautiful silver fruit bowl to be awarded to the club member winning greatest number of points on Rose Comb Black Minorcas, donor not to compete. The Boston Show Association gave a cash special of \$15.00. The club invites all breeders of genuine Rose Comb Black Minorcas to join its ranks and share its benefits. For full particulars, address Geo. H. Northup, Secretary, Raceville, N. Y.

TRIAL SUBSCRIPTION—Send twenty-five cents and we will send The American Fancier for thirteen weeks to one address.

BUFF-LACED INDIAN GAMES.

W. H. Card, of Bristol, Conn., owns the only flock of Buff-Laced Indian Games in America. They were shown for the first time at Springfield, Mass., in 1903, and were the centre of attraction in that great New England show, and many flattering offers were extended for the birds and eggs for hatching, all of which were refused by Mr. Card.

Buff-Laced Indian Game Cockerel.

It is claimed by the breeder that the Buff-Laced Indian Game is the true twentieth century fowl, combining all the qualities of every variety of the utility fowls, equal to and greater than the famous Leghorn family in egg production, with flesh producing qualities of the best market fowls, including all the requisites of ideal market

Buff-Laced Indian Game Pullet.

fowls, that is, according to Mr. Card: "Heavy weight, a bright yellow skin and yellow legs, a parti-colored fowl with snow-white under-color, insuring a clean carcass when dressed; the surface color a chestnut buff with a cream white lacing on every feather, making a color scheme of feathering equaled only by the wild birds as Nature paints them."

FARM NOTES.

Get all the farm implements in good condition before they are needed. This can be done in bad weather when outside work cannot be attended to.

To make a good lawn proper selection of grasses is needed. The following is an excellent combination: Kentucky blue grass, red top and perennial rye grass, of each five pounds; timothy three pounds, and of sweet vernal grass and white clover two pounds

each. This quantity will do for half an acre.

The greater the variety of good grasses in the pasture the better for the thrift of the stock that feed there. An especial advantage is that mixed grasses give a longer season of good pasturage. An early variety shades the tender blades of the later one, and it in turn shades the exposed roots of one that has passed the more vigorous period of its growth.

When an apple orchard is being planted different varieties ought to be mixed together in adjacent rows to insure cross-fertilization of the blossoms by bees. The Vermont Experiment Station has given results of experiments which go to show that a majority of varieties of apples do not bear good crops unless mixed in this way. Northern Spy, for example, seldom or never gives a full crop when its blossoms are not pollinated from trees of some other variety.

A writer in New York Tribune says: There are great mistakes made in setting apple orchards as to varieties, as some sorts can be grown and fruit well much closer together than others; as, for instance, the Northern Spy and Ben Davis, and even Baldwins do not require the room that the Greenings do; and, too, some sorts come into bearing when young and small, like the Ben Davis and Russets, and can be set even a rod apart. When they begin to grow together cut out every other row, and two or three years later every other tree in the remaining rows. Where peaches will succeed we prefer to set apple trees 40 feet apart and peach trees half-way between each way. And, by the way, we have good crops of peaches in our apple orchards when trees outside yield none.

There are not many farmers who would be willing to spread 40 or 50 loads of stable manure over the apple orchard; yet if they would do so they would find out that apple are profitable, as the manure would increase the yield, improve the quality and make them more salable in the market, says P. H. Jacobs. If the manure is not obtainable, a fertilizer consisting of 400 pounds of bone meal, 300 pounds sulphate of potash and 100 pounds of nitrate or soda will not be too large an application for one acre.

The farmer of the future will be a different man to the farmer of the past, laboring less arduously, farming more intelligently, surrounded with reasonable prosperity, and exercising his political privileges honestly and conscientiously; his labor will be honorable, dignified and productive, and agriculture and farmers will occupy the rank to which they are eminently entitled—Abner L. Frazer, in Cosmopolitan.

Nothing is so good, says an exchange, as well-rotted barnyard manure for the garden, and nothing is better than the manure pit to get manure into shape for garden use—finely rotted and free from weed seeds. We do not, as a rule, pay nearly enough attention to the garden. It should be one of the important features of the farm, and considerable attention given to it will be well repaid. It will easily supply the table bountifully for six months of the year and go a long way toward a supply for the other six months. Some of the practices of the old-fashioned gentlemen farmers of Northern New York

State could be well copied if I can believe what my father tells me. They kept their tables supplied with a great variety of fresh vegetables during the season and stored away large quantities of roots and tubers for the winter. Housewives dried quantities of lima beans, picked and shelled green, not allowed to ripen and toughen in the pod, and large bags of dried sweet corn, which they boil and get from the cob exactly as though for immediate consumption. Okra, too, can be dried and kept indefinitely and will be practically good for soups as fresh vegetables. But they had rich ground and the garden received every year a splendid dressing of well-rotted manure, and so produced large yields.

WILD-CHERRY TREES.

Wild cherry trees are dangerous nuisances on farms. They are the favorite nesting and breeding places of destructive tent-caterpillars. Every farmer should cut every wild cherry tree on his property. In one day's tour recently the writer of this paragraph counted on one hilly farm 150 wild cherry trees, big and small, every one of which bore from one to thirty tent-caterpillar nests. The trees averaged ten nests apiece, and the total was 1,500 nests. From these nests the caterpillars spread in great numbers, and that one farm is capable of infesting the country for miles around in a single season. Last year the pests entirely destroyed every apple tree on that farm, and this year they will sweep from the farm everything on it that falls within their bill of fare. An infested farm is a plague-spot in a farming region, and if the owner of such a farm refuses to do anything to check the pests his neighbors, in self-defense, should take his case in hand and move against the dangerous and destructive pests.—New York Farmer.

Profit in Capons.

The wise farmer, looking to profit, sees more weight in the steer than the bull. Poultrymen are finding that it pays well to raise capons instead of cockerels. What to do with the cockerel has been a problem, as they are hard to fatten. On the market the capon always finds a quicker sale, and at nearly double prices than ordinary chickens. A very instructive book on raising capons has just been published by George P. Pilling & Son, of Philadelphia, Pa. It shows how farmers and poultrymen can easily make a big increase in the revenue of the poultry yard by caponizing. There are instructive chapters on feeding and dressing capons. Readers of The American Fancier can obtain a copy of this interesting book by sending to George P. Pilling & Son, of Philadelphia, enclosing a stamp for postage. A full set of capon tools are sold by the above firm for \$2.50. They will send you a set with full directions including book, on receipt of price.

CLASSIFIED ADS

Notice.—No every other week or once a month contracts for classified advertisements will be accepted. See editorial page for classified ad rates.

PLYMOUTH ROCKS.

BLUE BARRED PLYMOUTH ROCKS, exclusively Bradley Brothers' strain, double matings, prize winners. We aim to please our customers. Eggs from choicest matings, \$3 for 15; \$5 for 30. 60 per cent hatch guaranteed or duplicated at half price. Incubator eggs, \$5 per 100. S. D. York, Deposit, Broome Co., N. Y. 52tf

WHITE PLYMOUTH ROCKS. FISHEL'S are the best in the world, winning more prizes at World's Fair than any other two White Rock Exhibitors. My new 48-page catalogue is the finest poultry catalogue ever issued. Send three 2-cent stamps for a copy. 5,000 birds to sell. Address U. R. Fishel, Box D, Hope, Ind. 532tf

EDDY'S BUFF ROCKS EXCLUSIVELY.—I have three hundred breeders mated for best results. Extra good layers. Eggs, special mating, three dollars per thirteen; regular \$2 layers, \$1. Discount on large orders. The Poplars, D. B. Eddy, Prop., Somerset, Mass. 94-tf

RIDGELY'S BARRED PLYMOUTH ROCKS, won at Herald Square and Madison Square. Birds and Eggs for sale; eggs, \$3 per 13. Joseph Phipps, Mgr., Towson, Md. 01-52

WORLD'S FAIR WINNERS.—COCKS, Cockerels, Pullets, for sale. Clean sweep wherever shown. Six first prizes at Poughkeepsie; more prizes New York State Fair, 1904-05, than twenty competitors combined. Cockerels, three dollars up; pullets, two. Edgewood Farm, Ballston Lake, N. Y. 538-tf

400 BARRED P. ROCKS, BRADLEY Bros. strain; pure fine stock. Write for prices and show-room record. Blue Barred Farm, Box 40, Chagewater, N. J., F. H. Castner, Prop. 527-tf

WHITE ROCKS. WINNERS OF WHITE Rock Silver Cup at Lititz, Dec. 05. Eggs from prize matings, \$3 and \$1.50 per 15. J. D. Koons, Northampton, Pa. 35-86

BOUCK'S BARRED ROCKS AT AU-burn and Schenectady, 1905, won 9 firsts, 9 seconds, 2 silver cups. This season at Auburn, Frankfort, Schenectady, Gloversville, Herkimer, 5 regular, 35 special prizes. Best eggs, \$3 per 15; \$5 per 30; incubator eggs, \$5 per 100. Arthur G. Bouck, Frankfort, N. Y.

BARRED ROCK EGGS FOR HATCHING, Bradley Bros. Strain, \$2.00 per 15; \$10.00 per hundred. The remembrance of quality remains long after price is forgotten. I. W. Jenkins, 416 Stuart Ave., Syracuse, N. Y. 640-52

BUFF ROCKS—SOLID IN COLOR, WIN-ners of 100 premiums in 3 years at Winter shows, including two silver cups. Eggs from winners, \$2.00 for 15. Other pens same blood, \$1.50, \$3.50, \$5.00 per 100. Dr. Coolidge, Bristol, N. H. 648-650

BUFF ROCKS AND BUFF LEGHORNS for sale; took ten prizes at Rochester Poultry Show and two at New York Show. Eggs for sale. Breed prize winners; they are the kind that pays. A. J. Hamm, Canandaigua, N. Y. 648-650

DEFANDORF'S WHITE ROCKS—1ST and 3d cockerel, 2d hen and 4th pullet on four entries at Cincinnati, in January, 1906. Fine layers and thoroughly practical birds in every way. Eggs from best stock, \$3.00 for 15. J. F. Defandorf, Garrett Park, Md. 648-650

HAM'S BARRED ROCKS AND BUFF Rocks—Winners of first prizes at Madison Square Garden and Grand Central Palace. Grand stock for sale at half price after May 1st. Buff Rock eggs, \$2.00 per setting from solid Buff stock. Frank D. Ham, Livingston, N. Y. 648-650

BARRED ROCKS.—FAMOUS "RING-let Strain." Will replace every infertile egg. Pens carefully mated. J. L. Wilson, "The Portland Farm," Port Chester, New York. 642-54

BARRED PLYMOUTH ROCKS—MATED particularly to produce grand females. Winners at Boston and Lenox. Why pay \$5.00 upward when you can get as good for less. Eggs, \$3 per 13; \$5.00 per 26. W. J. Welsh, Lenox, Mass. 643-656

BARRED ROCKS THAT ARE GREAT layers and always win in the show room. At Cortland, 3 firsts and 2 seconds; at Broome County Fair, 2 firsts, 1 second. Stock and eggs in season. S. P. Bulkeley, Cortland, N. Y. 646-651

AN UNPARALLELED OPPORTUNITY. Eggs for hatching from Barred Rocks at \$2.00 per set. Bradley Bros. Strain direct and everyone a hummer. Winning 1st cock, 2d hen, 2d pullet at great Gloversville Show. A few No. 1 show and breeding pullets yet to spare. John C. Rice, Johnstown, N. Y. 643-655

EGGS FROM STRICTLY FIRST-CLASS stock in Barred Rocks, Buff Leghorns, winners at Madison Square; 2d Buff cockerel, also color special. At Auburn, 1st cock, 1st cockerel, 1st pullet, 2 pen, young. Eggs, \$2.00 per 15. Hovey & Fairbank, 9 West St., Utica, N. Y. 644-656

BARRED PLYMOUTH ROCKS—CHAS. M. Griffin & Son, Shelter's Island, N. Y. 644-651

BARRED PLYMOUTH ROCKS—BRAD-ley Bros. Strain, pure. 95 prizes, 1905-06. Nine breeding pens mated for this year. Mating list gives photographs of the males heading each pen; also winnings. Eggs, \$2.00 per 13. Blue Barred Farm, Box 40, F. H. Castner, Prop., Chagewater, N. J. 640-666

CANADA'S BEST BARRED AND BUFF Rocks—I have mated some of the grandest specimens of these two varieties that can be found. Will give excellent value in eggs and stock. Fine illustrated catalogue on application. Eggs, \$3.00 and \$5.00 per sitting. Stock for sale. J. R. Boyce, Box 412, London, Canada. 647-698

FAIRFIELD STRAIN OF WHITE Rocks—Sure winners. During the past winter shows, won on three shows; fourteen firsts, also Ivory Soap Special for best white bird in show. Eggs, \$2.00 per 15. Larger lots, a matter of correspondence. Write for catalogue. Fairfield Poultry Farm, H. W. Schnitzer, Prop., Fairton, N. J. 642-657

WHITE PLYMOUTH ROCKS—EVERY breeding made is of pure and unchanging whiteness. Any setting that does not produce twelve chicks will be duplicated at half price. Eggs, \$1.50 per 15; American champion Bronze Turkey eggs, \$10 per dozen. George W. Salisbury, Phelps, New York. 649-651

WYANDOTTES.

HICKORY GROVE POULTRY FARM, Tionesta, Penn.—Home of some of America's best White Wyandottes; winners wherever shown. Winners at the late Pittsburg Show. Stock for sale at all times. Eggs in season at \$2.50 per 15. C. J. Killmer. 02-53

BUFF WYANDOTTES EXCLUSIVELY. Madison Square, 1905, 1st Pullet, 2d Cockerel and 3d Hen, and at Auburn, N. Y., the Buff Wyandotte State Cup, 1906, Madison Square, 1st Cockerel and 1st Hen, and again at Auburn, N. Y., the 1906 Club Cup. Stock and Eggs in season. Write for mating list. J. H. Scott, Auburn, N. Y., R. F. D. 9. 600-651

IT IS IN THE AIR; THIS WHITE Wyandotte fever, one cannot help catching it. The real worth of the breed, the real beauty as well, appeals to all. You are interested and want to know where to get stock or eggs of the best. Why not try a short cut and come to headquarters the first jump; to the acknowledged leading White Wyandotte Specialist for ten years past. Eggs, \$5.00 a setting; two for \$8.00; three for \$10.00. Two-cent stamp for catalogue. Arthur G. Duston, 34 High St., So. Framingham, Mass. 600tf

FOR SALE.—BLACK WYANDOTTES and Pekin Ducks. Winners at New York, Boston, Cincinnati and Cleveland, in 1906. Eggs in season, \$3.00 per 15. F. C. Sites, North Dover, O. 639-51

Boston Suburban Poultry Club.
Editor American Fancier:

Believing that a short notice of the doings of the Boston Suburban Poultry Club may be of a little interest to your readers, I take the liberty of sending a short account, giving the meetings to date.

The club is composed of the breeders and poultry men in the immediate vicinity of Boston, in fact, some take the trouble of a thirty or thirty-five mile ride to attend these meetings. They are held in Tremont Temple Building. The first was held three months ago, at which time E. H. George, of Haverhill, gave a very interesting talk on the breeding, mating, and fitting of White Plymouth Rocks. This was vitally interesting to a good proportion of the members as a number of the White Plymouth Rock breeders are represented in the club.

The next meeting was held a month ago, and Arthur C. Smith, of Waltham, Past Master in the art of mating and breeding of Barred Plymouth Rocks and Brown Leghorns, gave an especially instructive and entertaining address, illustrating the same with specimens typical of the breeds and with typical birds of the double mating system. This was followed by a short reminiscence talk by H. P. May, of Natick.

The last meeting, held Tuesday, April 17th, was especially instructive, being on incubation, by Dr. Cooper Curtice, of the Kingston Agricultural Station. This was illustrated by a large number of charts, results of his experience and study. This could not but be very helpful to those just taking up Agricultural Incubation as well as to those who have been hatching chicks in this way for years. Had I the room to speak, but there are two thoughts that I will speak of, and which seemed to impress themselves on me. One was that after years of study, he has decided that it is unnecessary to turn the eggs over; they are put into the

would help in most cases those starts which are made by enthusiastic but poorly informed poultry men, and aid putting the whole industry on a firmer basis.

In my next report, if you so desire, will give you more in detail of the club and the working of it for there will be only meeting to give account of—and “will boil it down.”

“A.”

NO. 650

THE FARMER'S POULTRY

BY HENRY R. INGALLS

The following address was delivered at a Farmer's Institute, held at Nortonhill, N. Y., by Henry R. Ingalls, the well known Buff Wyandotte fancier and breeder:

I have for my subject that department of the farm that is but little thought of or looked after in an up-to-date and intelligent manner—the poultry department. I guess there is not a farm in this vicinity but what supports a flock of fowls, but on very few farms does the poultry help to support the farm. Poultry keeping seems too small and insignificant a thing for the average farmer to devote time and attention to. This does not prove that it is; but, just the same, many otherwise progressive farmers look at it in that light.

Most farmers will devote hours of time and care to the saving of a little lamb or pig, that they will keep for six months and sell for three dollars, but they have no time to fool away with a brood of a dozen chickens that in three months would bring them six dollars. The average farmer is a man of large things, cows, horses, sheep and hogs are raised and kept in as large numbers as the farm will support, but the busy little hen is wholly overlooked as a medium of production and profit because she is small.

Now, when it comes to making the wealth of this great country of ours, that same insignificant, little hen has all the rest of the great mediums of wealth knocked silly. We may be obliged to make an exception in favor of Standard Oil stock, but we are talking about farm crops. Probably not everybody knows that the eggs and poultry produced in this country exceed in value any other farm crop. Even the gold and silver mines have to take a back seat when they go up against the little old hen, but it is a fact that the few eggs and the few chickens produced on these farms and small places exceed in value every year the value of any one other product of the farm.

One hen is a small thing, but when we come to foot up what all these millions of hens are doing and are worth, we get a total that is simply astonishing, and this on a very small average product per hen. If through better knowledge of the hens needs and consequent better care we increase the production twenty-five per cent, or fifteen per cent, or even ten per cent per hen, we would be adding thousands upon thousands of dollars to the wealth of the farmers. The hen does a great deal, but she can be made to do very much better, and it is my purpose to point out some things that will help to accomplish it.

While no man can make a hen lay,

almost any man can make conditions favorable for egg production, if he only gives the matter some thought and attention. We all know it is no very hard job to get hens to lay in the spring of the year. They do so because they have to, for nature has provided the hen with organs of reproduction and the spring is the natural breeding season, so the hen shells out the eggs at that time.

Hens do not lay because they want to, or, at least, I do not think they do, but because they have to, and the only way we can get eggs in the fall and early winter is to get the birds in the right physical condition, or, in other words, in breeding condition, and nature will do the rest. A hen is born with the germs of all the eggs in her that she will ever lay, and it all depends upon how she is fed and kept, how long she will be laying what eggs nature has provided her to lay. It is estimated that a hen can lay about six hundred eggs, and, if this is the case, and she lays twenty-five a year it would take her twenty-four years to lay them all; but, if she can be induced to lay two hundred a year, three years would suffice to exhaust the supply. Very few hens lay two hundred eggs in a year, but a vastly greater number lay nearer the twenty-five mark than to the two hundred mark. It seems strange that if all hens are provided by nature to lay about the same number of eggs why it is that some hens are so much better layers than others. It must be that it is a matter of temperament. Hens differ in temperament the same as human beings, and the hen that is of a happy temperament and can be easily suited, and that is content with life as she finds it is the one that lays the eggs out of season and in season. This may be a strange theory to apply to hens, but it is the only way I can account for the great difference in hens as regards their ability to lay. I had an illustration of this in my own yard this winter. I have one pen of eight hens all of one variety, all fed the same, and only one of these hens has laid. She began to lay November 4, and laid eighteen eggs in that month and twenty-two in December. Why is it that this hen should lay and the others not? When we discover this secret we will know what to do in order to make hens lay in winter.

If my theory in regards winter egg production is correct, and I think it is, it is more a question of proper housing and favorable surroundings than it is a question of feed, although most poultrymen think that feed is the all important part. Probably we all have seen cases where one man would get lots of winter eggs and feed nothing

but corn, while some other man gave his hens a better ration and more variety and yet he got no eggs. I do not think the feed had much to do with it. It was the difference in the conditions under which the hens were kept that made the difference in egg yield. As proper conditions play a more important part in winter egg production than does the feeding, any hints that I may be able to give in regards to anything that goes to improve conditions should be of service to those who have never given the matter any particular attention.

Fowls should be housed in warm and dry quarters, for dampness is sure to cause trouble in more ways than one. A poultry house need not be an expensive affair, but for best results it should be as warm as possible or at least free from drafts. I have a nice poultry house but it is not built warmly enough. It is one thickness of matched boards and is lined with tarred felt and I know it will never be a good house until it is ceiled on the inside. I believe the house should be lathed and plastered, as this makes a wall that is solid and free from cracks in which lice can harbor. Most people when they ceil up a hen house use cheap lumber and a wall so made is liable to be full of cracks and this lets the lice get in between the walls of the house, and that about stops poultry keeping as far as that house is concerned.

Any farmer can have a good poultry house, and if he is going to keep fowls at all, why not make conditions as favorable as possible? It can be done at little additional cost. The farm poultry house should be built on one side of the barnyard, if possible, so the hens can have the run of it at all times, as there is no better place for fowls than a barnyard. The hens should have an open shed, and such a shed is found in connection with almost every barn; but, if they cannot have access to the barn shed, one should be built as a part of the poultry house. The house proper, or roosting room, should be tightly and snugly built, but the fowls should not be confined to it all of the time, but should be allowed to run in the open shed or the barnyard whenever the weather will allow. If fowls are kept active, cold air does not hurt them, and on very cold days they will prefer running out in a shed and seeking direct sunshine to staying in the house, even though the house is warm. This arrangement allows the fowls some liberty and a chance to do what they please, and this makes them more contented and happy, and that means more eggs, according to my theory. No matter how well you house and

feed a hen she will not lay much unless she is happy and contented.

If one has a tight and warm poultry house it requires some attention to keep it in proper condition. Such a house will get damp on the inside in very cold weather if care is not used to keep it well aired. It should be opened every day for an hour or two to let in a large volume of fresh air, and if this is done the house will not get damp. Another very important point is to keep such a house clean and in a sanitary condition. The droppings should be removed at least twice a week, and every day would be better.

If a farmer did not clean his horse and cow stables every day he would be called lazy and shiftless, and all that sort of thing, but the best and most careful farmers generally clean their hen houses once a year. Just imagine how a hen must enjoy roosting over a pile of filth of a year's accumulation, and also think what the effect must be on the health of the hen. Is it any wonder that hens do not lay any better?

The roosts should all be on a level and be placed about a foot above a smooth platform upon which the droppings fall, and the platform should be cleaned often, and the droppings composted with something that will keep them from heating. Hen manure is our best fertilizer and should be saved. The floor of the hen house should be covered at least six inches deep with fine straw or chaff and all whole grain should be mixed with this litter and the hens made to scratch for all they get. This gives them exercise, promotes digestion, makes the hens contented, and helps the egg yield. This method of making the hens take exercise is one of the most important points in keeping the flock in good health and condition during the confining days of winter. I make my hens dig for all the hard grain they get, and I have never had any feather pulling or egg eating among my birds.

A hen needs exercise as much as any animal, and they cannot be kept in good health unless they do exercise, especially if they are well fed. Heavy feeding of an entire grain ration and lack of exercise is the cause of much of the trouble with poultry. Few people who keep fowls stop to think that a hen needs green, bulky food, the same as a cow or a sheep, but this is the case. If the hens have access to the barn floor or any place where hay is fed or handled they will be able to get about all the bulky food they need, or at least enough to keep them in fair condition. They pick up and eat bits of hay, especially clover heads and leaves. Cut clover, or clover meal can be purchased specially prepared for

poultry feeding, and if the hens cannot get where they can pick up what they want in this line it should be given them.

Two dollars worth of clover will save five dollars worth of grain, and at the same time keep the hens in better health. We use shredded clover; this is second growth clover hay that has been shredded up fine and then cut into quarter inch lengths. This clover forms about one-half of the bulk of the mash feed. We put the clover in a pail or tub, pour boiling water on it and let it stand a while to soak and soften. We have a mixing box in which we put what ground feed we use and then we pour the clover and water on the feed and mix it up so as to form a crumbly mash. Clover is a balanced ration in itself and is rich in protein and lime. Hens that have plenty of clover will not lay soft shelled eggs, neither are they liable to get disease of the liver so common to hens that are fed on grain exclusively.

Some of my neighbors have trouble with their hens in the winter by the birds getting stiff and lame and some will lay flat on their bodies with their legs sticking straight out behind and they get so they cannot get on the roosts and all that sort of thing. Now all that is the matter with them is they are fed on nothing but grain, and they are all diseased, and the only way to prevent all this is to see that they have plenty of bulky vegetable food. Cabbage, turnips, beets, and even apples, are good, but prepared clover fed in the mash is the best of all. Animal food should not be overlooked as it is necessary for best results. Animal meal and beef scrap can be purchased of our local dealers and either is good and a little put in the mash every day will benefit the fowls and increase the egg yield. Grit is as essential as food and I find there are lots of people who do not supply grit to their fowls in winter. To such we will say, they might just as well get rid of their fowls as to try to keep them if they are too careless to provide good hard, sharp grit for the birds. Oyster shells are not grit by any means and should be supplied independent of grit. Grit can be purchased for seventy-five cents a hundred pounds and that amount will supply the average farm flock for the winter.

As to what should be fed to the fowls, we will not say very much, as it is more the way they are cared for and housed than what they are fed that keeps them healthy and productive. For whole grain, corn, oats and buckwheat are most common and will be the most used. Oats are the best and should form at least one-half of the whole grain ration. For mash, wheat bran, wheat middlings, ground oats, animal meal and clover should be used. If most of the whole grain is corn do not use any corn meal in the mash.

Most farmers have a flock composed of hens of various ages, early and late hatched pullets are running together. Now, this is no way to do as the old hens and the pullets should be kept separate, for they require different treatment. In such a mixed flock the old hens are likely to get fed too much and the pullets are likely to go half starved, and neither will do as well as if kept separate, and cared for and fed according to the needs of each. Pullets will require and stand liberal feeding while it is a very easy matter

to overfeed the older fowls. Hens two years old should be either sold or eaten and their places filled with early hatched pullets. Generally it is the pullets that do the laying through the winter and they should be coaxed and cared for so as to get them started to laying as early as possible.

The trouble with the average farmer and his poultry is that he does not think he has any time to fool away with the chickens, but in this he is wrong, for he can afford to give the chickens a certain amount of his time each day the same as he does his cows and other stock. He would get better returns for the time spent with poultry than with any other stock. Fresh eggs are always in great demand and bring fancy prices. Of course the farmer with his comparatively few hens cannot get these fancy prices for he cannot produce the goods in sufficient quantities. There is a fine chance for co-operation among farmers along this line. Suppose that ten of the most enterprising farmers in this vicinity should get together and form a co-operative association for the production of fancy eggs. We will say that each one would keep one hundred White Leghorn hens, that would make a thousand, and with this number of hens these farmers could supply quite a large fancy trade and they could get prices that would certainly make a flock of one hundred well-bred, well-cared for hens pay their cost, pay the taxes on the farm and furnish all the groceries used by the family. I will wager that if ten farmers started in along this line with one hundred hens it would not be more than a couple of years before they would be willing to increase the number to two or three hundred each. Feed could be bought on the co-operative plan and the cost of keeping the birds reduced to a much lower figure than where each man buys in small quantities at retail. The trouble with the farmer is that he lets the middlemen eat him up.

Over in Denmark the farmers on their little farms would seem to our big American farmer to be unworthy of any notice, but these same little farmers over there have hundreds of these little co-operative societies. In fact they market nearly all of their produce and buy nearly all of their supplies in this manner. They make a specialty of dairying and poultry keeping, and they market their eggs in England at a good profit, and the English themselves are a nation of poultry keepers. Why farmers in this country do not take co-operation is a great mystery. There is certainly a fine chance for farmers right here in this vicinity to take hold of the poultry and egg business on the co-operative plan as above outlined and make a great success of it and add very much to their incomes at a very little outlay of cash.

Establish a well-kept poultry department on your farm and see that it has the time and care devoted to it that it deserves and it will surely be found to be profitable. Enough chickens should be raised every season to keep up the number of hens that should be kept. If we keep one hundred hens we should require at least fifty pullets every season, this would give us fifty pullets and fifty yearling hens. This makes a very good kind of flock if the hens and pullets are kept separate as they should be.

Probably the most difficult part of the business is in hatching and raising

the chickens. Sometimes the hens do not want to set until it is too late to get out the chicks as early as we want them. Late chickens are no good, I have learned this by bitter experience. They eat and give nothing in return. They are more liable to disease than the more vigorous, early-hatched ones. If we depend on the hens to hatch the chickens we will have to wait until the hens get ready to set, no matter what time it is. If quite a number of chickens are wanted an incubator and some brooders would be a good investment although hatching and rearing chickens by artificial means is more or less difficult and by no means certain of good results. As but few farmers have incubators and brooders it is not necessary to spend time in giving any directions for their use.

We find the worst drawback to the successful raising of chickens on the farm is lice. Lice kill about seventy-five per cent of all the chickens that are lost. Lice are the worst enemies of the poultryman, especially if he does not know about how many kinds of lice there are and their habits. It is only by continually fighting them that we can raise a good per cent of good, healthy, vigorous chickens. No hen should be set unless she is well dusted at least four times with some good lice powder and the little chicks need attention or they will soon be covered with lice. The big gray head louse is the worst, they will kill the chickens if they are not kept off.

While the hens are running with the chicks they should be well dusted with lice powder once a week and the chicks should also be dusted as often. The coops should be kept clean, for filth and lice go together. Keep the coops clean and use some liquid lice killer and lime in them. Lime is a great cleanser and disinfectant and should be freely used around the chicken coops. If the chicks are not lousy they will grow and thrive very well under almost any kind of feeding but it is best not to give sloppy food to little chicks and not give them more than they will eat up clean in a few minutes. If the chicks have free range, cracked corn is as good a food as the farmer can use. See to it that the corn is not sour and musty. Spoiled corn will kill the small chicks.

Farmers should provide larger and better coops than they do. It does not cost much to make roomy and watertight coops and they are much better than the makeshifts usually used. If little chickens are kept dry and free from lice they are not liable to have disease unless they get the gapes. On many farms gapes kill off the chickens about as fast as they are hatched, but it is not necessary to be troubled with gapes. Put your chickens on ground that has never been used by the fowls, keep the chicks dry and clean, use lime around the coops and do not feed sour, or wet, sloppy food, and your chicks will never have the gapes.

Poor management and lack of proper attention cause most of the trouble in the poultry yard. Any farmer can have a profitable flock of poultry if he only gives the matter some thought and the same care that he gives the rest of the stock he keeps. Most farmers take more or less pride in keeping their stock in good shape and any farmer who does not take a little pride in his stock and his business in general, is past redemption, and it is

no use to try to help him for he will not help himself.

The farm is the ideal place for poultry keeping and any farmer who does not make some effort to keep up a good productive flock of fowls, if for nothing else but to keep his table supplied with eggs and meat, is sadly in need of something to stir and enliven his ambition. Poultry is profitable if properly used, and thousands of people know it and make use of it accordingly, but it is with poultry as it is with everything else, one cannot get something for nothing, and that is what too many of our farmers are trying to do. Give the hen a chance and she will certainly help to pay your taxes, at least.

We know that to get a profitable egg yield at the season when egg prices are highest in price we should have early hatched pullets and yearling hens that have moulted out early and should house them properly, give them a chance to exercise, in fact, make them exercise, give them as much liberty as possible, see that they have a variety of food, different kinds of grain, cut clover, cabbage, beets, etc., animal meal and grit. Clean houses, that are dry and free from vermin, are also a necessity, as well as good food.

There is one point that we have not yet touched upon, and that is a uniform flock, and the only way that we can get that is to use nothing but pure bred stock. It is not necessary for every farmer to be a fancier, but the chances are if he gets a fine flock of pure bred birds he will sooner or later begin to take pride in seeing how good birds he can breed. George O. Brown, in *The American Fancier*, says that when your neighbors begin to call you a chicken crank, you should go around back of the barn and hug yourself, for you are getting to be a success as a poultryman. Just so with any farmer, when he begins to take pride in and talk about his nice birds, he is surely on the road to success for he is beginning to look into the whys and wherefores of the poultry business.

The fancy poultry business is getting to be a large item, as it supports many poultry papers and hundreds of shows throughout the country, and the prices that are paid for the finest birds are simply beyond belief. One thousand dollars was refused for a single bird at the Herald Square Show, in New York City, and one hundred dollars is getting to be a very common figure for a fine bird. Of course all this is beyond the farmer, but any farmer can and should have a pure bred flock for the sake of having a flock all as near alike as possible. Little hens, hens, and medium sized hens do not work well when they are all kept together for the reason that the small active birds and the large sluggish birds need different food and different care in general.

The cost of starting a flock of pure bred fowls will be but little and in more ways than one will the returns be better. As an illustration of what any farmer can do with pure bred fowls, I will say that if any careful farmer will come to my place I will give him all the eggs, from fancy birds, that he wants and when the chickens are large enough so I can tell how good birds they will make, I will give him one dollar each for what I want; I would not give ten cents for one of his common hens. No matter what breed of fowls a man may have, if they are good, pure bred stock some.

will be looking for just such birds and will be willing to give a good price for them. Nobody wants the scrubs usually found in the farmer's yard.

All the different breeds of fowls have been bred for years with a certain object in view, some for eggs, some for meat, and it is reasonable to suppose that these traits are a part of the nature of that particular breed of fowls. Leghorns are layers and do not sit, Wyandottes are good layers and good market fowls, Plymouth Rocks are larger than Wyandottes, are just as good for market, but they probably do not lay as well. A flock of Leghorns will give you the eggs but they are poor market fowls and are not so good winter layers as Rocks or Wyandottes, but they will lay more eggs in a year on less feed. If you are looking for eggs alone you would keep Leghorns, while if you wanted a general purpose fowl Rocks or Wyandottes would be the thing. The average farm flock is made up of birds of many different types and no bird in it has any fixed characteristic, and no man can tell whether his birds are built for any purpose or not.

If a man has a flock of pure bred fowls the birds will all be of the same and have the same characteristics. The scrub hen, the scrub cow, hog and sheep cost the farmers of this country more than fires, robber trusts and hail storms put together. If any man can look at a scrub hen and tell what in-born trait of character she has that is likely to make her useful he may be justified in keeping her. A nice flock of pure bred Leghorns will lay more eggs than any flock of scrubs on the face of the earth for the simple reason that they are pure bred Leghorns.

One of the principal factors of success in the poultry business is the uniform flock and nothing but the pure bred flock is it. Do not overlook the fact that the pure bred hen is as much better than the scrub hen as the pure bred cow is better than the old brindle cow, with horns three feet long, that used to run through the woods and fields in the early days of our history. The old brindle cow has largely passed into history and now let us place the scrub hen beside her or behind her.

If we have good tools to work with we can do a good job of work, if we try; and occasionally there is a man who can do a fairly good job with poor tools, but how much better we can work if we have something good to work with, and this applies to stock as well as tools. Poorly bred stock, or more properly speaking, stock without a breeding at all is the curse of our farms. No farmer who is handicapped with scrub fowls will be able to make the most of his time and opportunities. This is as true of poultry as it is of other stock and pure bred poultry might be a stepping stone to a better bred stock of all kinds. Once let a man get the breeding fever and he will not be satisfied unless he is improving his stock from year to year.

The use of nothing but pure bred males is the first step in the right direction and every farmer should see to it that he uses nothing but the pure bred male. A pair or a trio of pure bred fowls, calves, lambs or pigs will cost but a small sum but they would be the foundation of the pure bred flock or herd of the future. We cannot say too much for well bred stock, for such is the only thing that the business farmer should have.

Sketched from life

1905

SILVER GREY DORKING PULLET

Winner of Champion Challenge Cup, Boston, 1905. Bred and owned by Watson Westfall, Sayre, Pa.

THE SILVER GRAY DORKING.

By Watson Westfall, Sayre, Pa., Secretary-Treasurer American Dorking Club.

In these days, when we are hearing so much about our newest and latest manufactured breeds of fowl, I thought perhaps, for a change, at least, it might please and interest your readers to look upon the pictures of a pair of really fine Silver Gray Dorkings, and hear a word in their praise from one who has bred this grand fowl exclusively for seventeen years. The pictures, as mentioned, are of the champion challenge cup winners at Boston and New York, both bred by the writer and they were sketched by Artist Graham directly from photographs taken at the time of winning. As the sporting world admires an athlete, with his strong, sturdy limbs, broad, heavy shoulders and deep full chest, so can all lovers of fine poultry admire

the Dorking fowl, that for years has shown these developments superior to all others.

I venture the assertion that there has been no fowl yet produced possessing the amount of flesh proportioned to the amount of bone as will be found with the Dorking, and this point will be very readily recognized by the butcher and the marketmen. During all the years I have had the Dorking fowl, I have found them possessing every quality which goes to make up the general all-purpose fowl. Small bones and sweet, tender, fine-grained meat for the table. Their short legs, large wings and gentle disposition makes the females especially adapted for setters and mothers. As layers, my record is seven hundred eggs in eight months, from five pullets, the count beginning on January 1st. The growth of young stock, my record is one hundred and thirteen ounces in one hundred and twenty days for a cockerel and seventy-seven ounces for

a pullet of the same age.

Since organizing the American Dorking Club some few years ago there has been a steady and increasing interest and demand for the Dorking, and as a result some of the very finest Dorkings in England and Scotland have been imported by its members, and there are now raised each year specimens fully equaling those in their mother country.

At our last Boston Show, where were exhibited one hundred and twenty-five Dorkings, there were two English winners, one a hen, second prize at the last Crystal Palace Show, and the other a cockerel, third prize at the last Dairy Show. Both were nice birds, but the former only won sixth place and the latter fifth against our American bred birds. That the Dorking may continue to gain favor and finally take its proper place in the front rank of our fowls in America is the earnest wish of the members of the American Dorking Club.

(G. O. Brown.)

See that all the needed repairs to the harness is attended to, so as to be in readiness for spring work. Copper rivets can be bought at hardware store and a good deal of the mending can be done at home.

Rough hillside lands can be turned into sources of profit by utilizing them for poultry runs and setting out fruit trees for orchards. Such lands cannot well be cultivated.

Make a study of the soils of the different fields. Intelligent farming

always means profitable results. There is no such thing as luck in farming, good or poor results come from specific reasons.

In some sections of the country women make good "pin money" raising violets. Some branches of hot-house culture are especially suitable for women.

Give the hens a chance to follow the plow. They find worms, grubs and other insects that will help the yield of eggs, and their aid in helping to keep in check insect depredators will be quite an important factor.

Rhubarb pie and sauce are good spring medicines to take, and pleasant ones too. The acid is good for the blood in spring. Good wine and jam can also be made of it.

If a certain vegetable is plentiful on the market, gather the best and leave the common on the farm. If scarce, cull close and sell each kind

and size for what it is.

Let your word be surer than your bond, and your wholesale customers will have the larger part of your load sold before it gets to the store and the consumer will have the pot on ready to receive it.

Have a good portion of the garden flowers the old time favorites. They call up pleasant memories to the older members of the household. Many of the old-time flowers are beautiful.

When you get a case of the blues go out in the garden with the hoe and get busy. You will soon become so interested that you will be enjoying the wonders of nature, and you'll have a good appetite for the next meal.

Harden the tomato plants by setting them out under cold frames. If they remain too long in the hot-bed they will spindle up. Short stocky plants are best and will produce more tomatoes.

Shull's Saunterings

Next, I called upon the well-known and popular fancier and breeder of White Wyandottes, Dr. H. Judson Lipes, of 178 Washington avenue, Albany, who rears a superior strain of White Wyandottes on his farm outside of the city limits, where he has a very fine plant. It is to be hoped that the Doctor will send The American Fancier a description and half-tones of both plant and birds, for they would be very interesting to all true fanciers.

* * *

I also called upon William C. Jordan, Assistant Secretary of the American Fancier's Association, who is a breeder of fancy pigeons and White Wyandottes, which have won a number of prizes in good company at several shows. Mr. Jordan is a jolly good fellow, and is never at a loss for something to say, and is a personage whom it is a rare treat to meet.

* * *

Two miles east of Johnstown, N. Y., is the well-known plant of John C. Blunck, known as the Prospect Hill Poultry Farm, which is given wholly to breeding and rearing Game and Ornamental Bantams and Standard Games of all varieties. The genial John had over seven hundred birds when I visited him, and even to give a synopsis of what I saw is quite beyond me. The first pen to attract my attention was an aggregation of Black Breasted Red Games, a cock and ten females that for size, color and station, and make-up generally, lay way over everything it has been my pleasure to look upon in many a moon. The cock bird is a big fellow, grand in color, and of the typical wedge-shaped body, with splendid reach and station. Next I looked upon a pen of Black Games. Here I met a genuine surprise, it being universally understood that in Black and White Games that the quality is away below that of all other varieties, and I must say that I never expected to see anything like the collection I saw. It was a showing that it will take other varieties a good long while to beat. Silver Duckwings were next in order. Here was a grand variety, among which I saw the first prize winner at Madison Square, this same hen winning the special for the best female Duckwing in the show. Next came the Golden, with seven or eight as nice a birds as ever delighted the eyes of a fancier. The cock at the head is one of the grandest birds of his variety. In Brown Reds, John has them to satisfy the most exacting, many of the original stock being imported from England. The pen of Birchens that I came upon next were a delight, and, to be truthful, I cannot do them justice. In fact it makes a fellow stop to think where he could find fault with them. Grand in color and station, with long, snake-heads, blue-black in face, with the black and white markings, make this variety a combination that it is hard to beat for beauty. In Red Pyles, John again has something away up in G, a large, healthy looking lot of birds, great in size, with plenty of style and station, long, snake-like heads, with good orange colored legs, taken together

with their beautiful plumage, they make up a deservedly popular variety, that have few, if any, equals, and no superiors. Black Sumatras are last on the list, but by no means least in quality, as the owner can verify by his winnings in the past few years. Black as crows, with that metallic green cast to the feathers, when the sun strikes them, with the quality, style and general make-up, they are considered by many to be one of the most handsome of the Game family. Mr. Blunck is also a breeder of Game and Ornamental Bantams and Silkies, all of which he breeds to a great style of perfection, breeding about every variety of Ornamental Bantams known, and some other time I may have something to say of them.

* * *

Situated on Porter street, Gloversville, N. Y., are the yards of Ira Sitterly, the well known electric railway man, who rears Golden Wyandottes, Golden Penciled and Golden Spangled Hamburgs. His birds did some remarkable winning for him during the past show season. The Wyandottes are of good size and marking, and originally came from the best blood obtainable, which he has been line breeding for the past seven years. His Hamburgs came from the yards of Oke & McNeil, the well-known Canadian breeders, and Mr. Sitterly has been breeding them for several years, and has unquestionably the finest flock of this variety that one would want. His winnings the last show season speak well for his stock, and will no doubt bring him his share of patronage.

* * *

At the Stephen Thompson Paper Mills, at Greenwich, N. Y., I met H. E. Humphrey, who is a breeder of standardbred White Leghorns, having bred this variety for over a quarter of a century. He lately secured stock and eggs from some of the best breeders, which makes his present stock second to none. At Cambridge, he lately won two firsts, one second, and three thirds. With two entries at Schenectady, a cockerel and a pullet, he won two firsts, also special for best pullet in class. He has the birds of the true type, which have proved themselves to be prolific layers of large eggs.

* * *

Joseph Miller, Jr., of Greenwich, N. Y., is a young breeder of Rose Comb Rhode Island Reds. He won at Cambridge, Albany and North Adams during the last show season, taking second cock at Cambridge, second cock and second pullet at Albany, and second cockerel and first pullet at North Adams on an entry of two birds. His birds are free from smoot or foreign color in plumage, and are liberal layers of large brown colored eggs. The cock bird in Pen No. 1 is sire of more birds winning first than any bird of its specie in the country. Pen No. 2 is headed by second cock at Cambridge, six very fine pullets being in his company.

* * *

I next visited Elmer Holbrook, S. C. B. L. S., which means Single Comb Brown Leghorn Specialist, who has a

very nice lot of these egg machines, that are right in it when it comes to winning. In Pen No. 1 is the cockerel that won first at New York in 1905, who had eight birds mated to him in hopes of producing show cockerel birds of a uniform color. For his pullet matings he has third hen at Rochester, 1905; also first and third hen at Schenectady, 1906, and a few more very fine birds that he has never shown. Mr. Holbrook also has three more pens mated that should prove good breeders of either pullets or cockerel, not a poor one being in the lot. At the Great Eastern Show this year Mr. Holbrook won first cock, first cockerel, and second and fourth hen. His birds are of good size, and are phenomenal layers, and their exhibition record certainly prove them to be a very attractive bunch of the right article in feathers.

* * *

Single Comb and Rose Comb Brown Leghorns are the hobby of William F. Liddell, of Greenwich, but just at present the owner is out of the former variety. He has at this writing first cock and first cockerel, and also third pen at Madison Square. He won four firsts and one second prize at Gloversville, besides his World's Fair and Chicago winners. In fact, Mr. Liddell has always been a most liberal exhibitor, and has few equals as a fancier, all of his birds being reared on farms, which gives them good size, plenty of bone and stamina, which helps to make prize winners.

* * *

V. E. Lincoln, of Groton, N. Y., is a breeder of Single Comb Black Minorcas. He has birds of good size and shape, together with the necessary color, if black is called a color. Their combs are the grandest ever, and they lay a large white egg, one of which is almost a meal in itself. Birds from this flock have won at Dryden and Auburn.

* * *

A. J. Shothofer, of Clinton, N. Y., is another breeder that I met at Utica. He breeds Single Comb White Leghorns and White Wyandottes. His birds are noted for their great laying qualities, and have won a name for themselves in the show room, winning during the last show season in good company at several of the leading shows.

JOSEPH L. SHULL.

BUSINESS HAS BEEN GOOD.

From all parts of the country come the same reports of prosperity and cheerfulness in the poultry industry. The past season has certainly been one to be long remembered. Our advertisers write of the remarkable returns which they have received from their investments, and altogether the situation appears to be one for congratulations. There never has been a time in this country when the poultry business promised as much for both small and large operators as at present. Our advice to all is—take advantage of this opportunity and make your profits while they are in sight. We would not reduce breeding stock too much, but the youngsters should be hurried forward and put upon the market early.

The duck is not a "quack" always; neither is a goose a "goose" when handled properly.

TRIAL SUBSCRIPTION—Send twenty-five cents and we will send The American Fancier for thirteen weeks to one address.

FINE PRINTING.

We desire to call the attention of our subscribers who are in need of printed matter to our modern facilities for doing all kinds of job printing. We have a large display of type for this class of work, and our machinery is of the most improved order. Our prices are very low, much lower than can be gotten elsewhere for the same class of work. All work done by us is guaranteed to give perfect satisfaction or money will be refunded. We will be pleased to estimate on any printing that you may want, and will give you reasonable figures on same. Let us hear from you, and we will, no doubt, be able to help you get up some attractive printing and engraving that will bring you customers when nothing else will. A trial order will convince you of the merits of our work.

The Bantam Fowl

BY REX

The display of Bantams of all kinds and character has never been so large as last fall at the fairs and winter shows. At some of the most popular fairs the display of Bantams was at least one-fourth of the whole exhibition. At several fairs that we have visited in the East the past season we were entered for competition from four to six hundred bantams. In some of the classes as many as twenty-five or thirty individual specimens competed, and the quality of the birds throughout all the classes better than have ever been shown before.

The Asiatic Bantams seem to lead in popularity, following the Black Red Game Bantams. More Cochins Bantams were shown than of any other variety, unless it might be the Game Bantams. The quality of the Asiatic Bantams has improved so very much in the past few years as to surprise even those most interested in them. The Light Brahma Bantams are beginning to take more of the breed characteristics of the Brahma; in fact, many of the specimens shown are simply miniature Light Brahmas, weighing about twenty-eight to thirty ounces, the color of the hackle, wing and tail so much improved as to rival the larger Brahmas. The striping of the neck hackle needs considerable improvement as yet, as does that of the flights and secondaries of the wings, but from the general appearance of the surface-color and the markings they are very much more attractive than ever before.

Formerly the Brahma Bantams were simply of the same shape and form as Cochins Bantams with Brahma markings. This has been so greatly improved that the Brahma Bantams, both Light and Dark, look like Brahmas. This is as it should be, and more attention should be paid to this by breeder, exhibitor, and judges alike, so as to compel those who hope to win prizes on Brahma Bantams to have them of Brahma shape and type. Vast improvement has been made in the Dark Brahmas as well, in shape, size and color. The stud of Dark Brahma Bantams that was shown at Boston a year ago and then sold to Mr. D. Lincoln Orr are as finely bred and of as fine a quality as are any of the standard-bred Dark Brahmas themselves. No one has better Light and Dark Brahma Bantams than has Mr. Orr, he having, we presume, given more attention to importing and having the best than any other breeder in the country.

In Cochins Bantams the march forward has been so regular and strong as to add largely to the beauty and value of all the four varieties. The Buff Cochins Bantams, we presume, are the best known of any variety of bantams in the world. More of them are bred, exhibited and sold than of any other, and we quite frequently see at the present time, male birds of as perfect Cochins type and color as is seen on the large Buff Cochins fowls. Dark or cinnamon color should not be

allowed in the show pen any more. It is old-fashioned and should be discarded. The soft, smooth, even golden-buff is the only color that should be encouraged and allowed in the show-pen. Judges and exhibitors alike should drive the cinnamon Cochins out of Bantam alley. Seldom, if ever, do we see a very dark or cinnamon-colored female shown. In fact, some of the most beautiful of all Cochins as to color, either large or small, have been seen in the little Buff Cochins Bantam females.

White Cochins Bantams and Black Cochins Bantams are now produced of the very highest quality of size, shape and color. Some of the very best shaped Cochins Bantam females that we have ever met with have been Black Cochins. They suffer less from the divided backs than any of the other Cochins, it seems. One of the greatest faults in the Buff Cochins is to have the back divided into four sections. One section the cushion and tail standing out alone, another from in front of the cushion to the neck, and the wings on either side, appearing like four divisions of the back. The true Cochins Bantam back should be one continual formation from right back of the neck clear down and including the back, cushion, saddle, and wings; all should be built out round and full as in the perfect Cochins hen.

More improvement has been made in the Partridge Cochins Bantams in the past few years than in any of the other Cochins Bantams. Better form, color, and marking are presented each year in the specimens shown. Some of the little females are almost as well marked as are the larger specimens, but the body color and the color of the penciling not so good yet as we would like to see it. In fact, the females fail very much in this when compared with the larger specimens. The rich mahogany-red color so desirable and so much talked of in the large Cochins females has not yet been brought to equal perfection in the Partridge Cochins Bantam females, but so much improvement has been made in them in the last five years as to almost warrant us in saying that in the near future we shall hope to see the Partridge Cochins Bantam females coming very close, at least, to their large ancestors in color and marking.

The Langshan Bantams that made such a furore a few winters ago have dropped almost entirely out of sight. Much mention was made of them for a time, but now they are seldom heard of. The statement was made that they were simply descendants from standard Langshans that had hatched some young very late in the winter, and through neglect they had made such a slight growth as to furnish the groundwork for a grand lot of Langshan Bantams. Many are of the opinion that they were simply produced from very spare-feathered, long-legged Black Cochins Bantams, crossed upon the bantams to get the more erect carriage, and the result was the

outcropping of considerable hock-plumage. However, in careful hands some of the best selected of these Langshan Bantams might have been gathered into beautiful specimens of the bantam kind.

We have seen some Minorca Bantams and some Ancona Bantams which were minatures of the larger of their kind. The Cuckoo or Scotch Gray Bantam has been brought to the front in this country under the name of Plymouth Rock Bantams. They are, however, simply the Scotch Gray or Cuckoo Bantam of England as bred there for many years, a small bantam rather of the Leghorn type, with single comb and barred like the Plymouth Rocks. It would be much better to continue them under the name of Scotch Grays so as to have uniformity in this country and in England in this variety or breed. The long, flowing tail of the Scotch Gray Bantams would scarcely conform with the proper shape and form of tail of the Plymouth Rock, and it is quite misleading and rather detracts from the interest of the breed to call them Plymouth Rock Bantams and exhibit them with flowing tails. There is rather too much latitude given to this kind of thing both by poultry show managements, judges, and exhibitors. It would be better for the poultry business at large if less latitude were allowed along these lines.

By whatever name they may call a bantam they should either have distinctive color and marking of their own or be named after some standard-bred breed and variety and they should conform to the shape, color, and marking of the breed they imitate. This is in absolute demand for all the Asiatic Bantams, Brahma Bantams, and the most miniature bantams in form, as Cochins Bantams, must conform to the same shape, form, and feather as demanded in the large Cochins, color in every case being alike as described in the Standard for color of the large breeds and varieties. If every one would bear in mind the fact that their bantams must positively conform to the shape and the color of the breed they imitate or imitate, there would be less trouble and dissension and fault-finding both in the buying, selling, and exhibiting of same. No bantam should be permitted to be classed or exhibited in a class under the name of a fowl that it does not conform to in shape and color. If these rules were followed out absolutely and continually, we would find far greater improvement still, coming to all breeds and varieties of bantams.

DATES CLAIMED.

Under this heading there will appear each week a list of all the shows claiming dates for the coming season. Secretaries of poultry, pigeon and pet stock exhibitions will confer a favor by sending in the dates selected as promptly as possible. It is not only a convenience and guide to secretaries of shows that have not selected their dates, but of great interest to readers of *The American Fancier*, a majority of whom are exhibitors.

The name of secretary and judges will be appreciated when sending in notices.

Aug. 21-24—Cortlandt, N. Y. Cortlandt County Agricultural Society, W. J. Greenman, Secretary.

Sept. 11-13, Mercer, Pa. Mercer County Fair and Poultry Show. T. E. Orr, Judge; John P. Orr, Secretary.

Sept. 17-22, North Yakima, Wash. State Fair, G. A. Graham, Secretary; Harry H. Collier, Superintendent Poultry.

Sept. 24-29, Spokane, Wash. Inter-State Fair, Robt. H. Cosgrove, Secretary.

October 2-5, Chatham, N. Y. Columbia County Agricultural Society, W. A. Dardess, Secretary.

Nov. 12-17—Houston, Tex., Howey S. Fox, Jr., Secretary.

Nov. 12-17, San Jose, Cal. Santa Clara Valley Poultry and Pet Stock Association, E. Van Every, Secretary, Edenvale, Cal.

Nov. 21-23, West Haven, Conn. D. A. Nichols, D. J. Lambert, W. R. Graves, Judges; E. J. Crawford, Secretary.

Nov. 27-Dec. 1, York, Pa. C. T. Cornman, William G. Minich, Judges; J. N. Lovett, Secretary.

Dec. 3-9, San Francisco, Cal. California Poultry Association, J. C. Williams, Secretary, Fruitvale, Cal.

Dec. 4-7, Holyoke, Mass., George Barnett, Jr., Secretary.

Dec. 4-7, Philmont, N. Y. D. A. Nichols, Judge; G. J. Anderson, Secretary.

Dec. 4-8—Youngstown, O., H. J. Cossler, Secretary.

Dec. 4-8—Wilkes Barre, Pa., David T. Miller, Secretary.

Dec. 4-8—Providence, R. I., Rhode Island Poultry Association, W. I. Brown, Secretary, 6 Exchange Place.

Dec. 5-8, Grand Rapids, Wis. Grand Rapids Poultry Association; B. G. Eggert, Secretary; Frank Heck, Judge.

Dec. 5-8, Paterson, N. J. Paterson Poultry, Pigeon and Pet Stock Association; Charles Frost, Secretary.

Dec. 5-8, Danbury, Conn. Western Connecticut Poultry Association, Charles H. Brundage, Secretary; Judges, J. H. Drevenstedt, T. F. McGrew, Hon. David Nichols and W. H. Card.

Dec. 5-8, Ellensburg, Wash., Harry H. Collier, Judge; Mrs. S. F. Montgomery, Secretary.

Dec. 6-9—Danbury, Conn., C. H. Brundage, Secretary.

Dec. 11-14, Lewistown, Mo. Lewistown Poultry Association; A. O. Brooking, Secretary, La Belle, Mo.; Frank Heck, Judge.

Dec. 11-14, Winsted, Conn. F. D. Hallett, Secretary.

Dec. 11-16, Tacoma, Wash., Henry Ber-rar and Harry H. Collier, Judges; Mrs. C. A. Pratt, Secretary.

Dec. 12-14—Kingston, N. Y., F. E. Miller, Secretary, Rifton, N. Y.

Dec. 12-15—Corsicana, Tex., W. E. Elliott, Secretary, Box 281.

Dec. 12-15, Fresno, Cal. Fresno Poultry, Pigeon and Pet Stock Association, George R. Andrews, Secretary.

Dec. 12-15, Stoughton, Wis. Stoughton Poultry Association; Sylvanus Ames, Secretary; Frank Heck, Judge.

Dec. 12-15, St. Mary's, Ohio. Wick Hathaway, Judge; F. F. Aschbacher, Secretary.

Dec. 17-22, North Yakima, Wash., W. C. Denny, Judge; S. H. Schreiner, Secretary.

Dec. 18-21, Geneva, Ohio. R. H. Munger, Secretary.

Dec. 19-22, Holland, Mich. Holland Poultry and Pet Stock Association; L. S. Sprietsma, Secretary; Frank Heck, Judge.

Dec. 19-22, Mohnsville, Pa. Wyomissing Poultry Association; George W. Hatt, Secretary, Mohn's Store, Pa.; Charles T. Cornman, Judge.

Dec. 20-22, Wenatchee, Wash., Harry H. Collier, Judge; John N. Johnson, Secretary.

Jan. 2-5, South Bend, Wash., Harry H. Collier, Judge; F. M. Heath, Secretary.

Jan. 7-11, Aurora, Ill. Aurora Poultry Association; Walter M. Smith, Secretary; Frank Heck, Judge.

Jan. 7-12, Auburn, N. Y. Annual meeting of American Poultry Association with Auburn Fanciers' Association. J. H. Scott, Secretary.

Jan. 8-10, Lenox, Mass. Honest "Dave" and Shaylor, Judges; L. H. Peters, Secretary.

Jan. 8-11, Middletown, Conn. Graves and Bunnell, Judges; Arthur L. Clark, Secretary.

Jan. 8-13, Seattle, Wash., George D. Holden, Judge; N. Anderson, Secretary.

Jan. 9-12, Alameda, Cal. Alameda County Poultry Association, C. G. Hinds, Secretary.

Jan. 9-12, Tiffin, Ohio. Chas. McClave, Judge; V. Crabtree, Secretary.

Jan. 9-13, Chilton, Wis. Chilton Poultry and Pet Stock Association; A. Stransky, Secretary; Frank Heck, Judge.

Jan. 15-19, 1907—Kansas City, Mo., P. H. DePree, Secretary.

Jan. 15-19—Angola, Ind., Tri-State P. and P. S. Association, W. K. Sheffer, Secretary.

January 15-19, Scranton, Pa., A. W. Close, Secretary.

Jan. 16-20, Charlotte, N. C. Charlotte Poultry Association; W. B. Alexander, Secretary.

Jan. 16-22, Portland, Oregon, Elmer Dixon, Judge; F. Fenwick and E. Carlisle, Secretaries.

Jan. 21-26, Walla Walla, Wash., Elmer Dixon, Judge; J. M. Davis, Secretary.

Jan. 28-Feb. 2, Cleveland, Ohio. Cleveland Fancier's Club Co.; F. L. Gruchl, Secretary; 1922 Woodland Ave.

Jan. 30-Feb. 2—St. Albans, Vt., C. O. Barrett, Secretary.

Feb. 5-9, Hudson, Mich. Southern Michigan Poultry Association; Ed. R. West, Secretary; Frank Heck, Judge.

TRIAL SUBSCRIPTION—Send twenty-five cents and we will send *The American Fancier* for thirteen weeks to one address.

A Weekly Journal Devoted to Standardbred Stock.

Application made for second-class rates at the Post Office at Ossining, N. Y.

J. H. DREVENSTEDT, Editor.

SUBSCRIPTIONS.

Subscription, \$1.00 per year.
Foreign subscription, \$1.50 per year.
All subscriptions payable in advance.

NOTICE TO SUBSCRIBERS.

Subscribers will be notified when their subscription expires. If a subscriber wishes his subscription to the paper to be continued he must so notify this office and send the amount in payment for the same, otherwise the subscription will be discontinued.

IMPORTANT NOTICE.

All matter, advertising or otherwise, must reach The American Fancier, Ossining, N. Y., or 26 Cortlandt Street, New York City, not later than Monday afternoon of the week in which the same is to appear.

ADVERTISING.

The advertising rate in The American Fancier is fifty cents per inch for each insertion. Five per cent. discount for payment in advance for six months insertions, and ten per cent. for payment in advance for one year's insertion.

CLASSIFIED AD RATES.

Forty-two words or less one time fifty cents; three times, \$1.00; thirteen times, \$4.00; twenty-six times, \$6.00; fifty-two times, \$12.00. Additional words at the rate of two cents each for one insertion, or one cent each for each insertion when run thirteen times. PAYABLE IN ADVANCE.

Mr. Charles M. Diffenderfer, of Baltimore, Md., received a letter last week from the party in England to whom he sold some of his Partridge Cochins Bantams stating that they were way ahead of anything yet produced on that side of the pond. He also received another order from the same customer for a very fine trio of birds, which includes a choice cockerel and two very extra choice pullets, to be shipped this week. Mr. Diffenderfer is naturally very proud of this achievement, and has the letters from one of the most prominent breeders in England to prove this, should any one doubt it. We are just as pleased to note his success and hope to see more choice birds go over to King Edward's country and place the American breeders in the front rank, where they should belong.

If there are any breeders in the United States, Canada or England that have White Crested Blue Polish fowl for sale, we should be glad to have their addresses, as we have had an inquiry for the same. They must be good specimens.

Since Ray Ruliffson became famous because his Black Cochins Bantams laid eggs that looked like small marbles, "Johnny" Tallinger, of the same city, (Rochester), became interested in Wizard Burbank's experi-

menting, and has produced a rubber necked Indian Runner Duck, that has the reach of a giraffe and will keep his peach trees free from the San Jose scale by simply feeding on the latter. But "Johnny" was always clever at such things. Years ago he had a strain of White Wyandottes that laid eggs the shape of door knobs.

Twenty Rouen Ducks, consigned to Doctor E. H. Morris, Sparkill, N. Y., arrived by "S. S. Victorian" from England, last week. They were reshipped to a customer in North Carolina.

The brief article on Silver Grey Dorkings, by Watson Westfall, as well as the two illustrations accompanying the same, deserve more than a passing notice. Mr. Westfall is an earnest and enthusiastic fancier of England's most famous fowl and has never wavered in his support of the same. We wish we could induce more fanciers to take up this fine fowl. It is far more useful and profitable than some of so-called popular newer varieties. Dorking eggs are large and white, the carcass is large and the flesh delicious. A fine combination—no better.

The International and Crystal Palace Show managers are trying to amalgamate, it is whispered. Good, if true. It seems to us, from what we have heard and read, that it is up to the Palace people to surrender and join hands with the now popular International management. Two big shows in one week, in one city, is too much of a good thing and not calculated to smooth over the strained relations existing. Shows that fail to meet their obligations sooner or later become dead cocks in the pit. The Palace had the "twenty-three" tag on two years ago and has been skiddooing ever since. As there are some American birds going over to these shows next fall, it would be well to know in good

season how matters stand in the show business in "Dea Old Lunnon."

Col. S. Sandbach, Royal Welsh Fusiliers, made a brief call at The American Fancier office last Saturday. The Colonel had just returned from a long trip to the West Indies, and was on his way to London, England. The two days he had in little old New York were largely taken up in looking up some of the chicken fanciers, and, of course, he "happened in" at "Billy" Stanton's, where there is usually a gathering of the feathered cranks. Col. Sandbach regretted his lack of time, as he intended visiting some of the numerous plants in the vicinity of New York. He took several Barred Plymouth Rocks over to forage on English fields and expects to import some more later on. The Colonel sent some Lakenvelders to this country in the past, but Partridge Wyandottes and Barred Rocks seem to be his favorites now. He does not like the American Partridge Wyandotte and thinks our fanciers are breeding the latter too dark in color. In this some of our most observing fanciers of Partridge Wyandottes will argue with him. Too many females, no matter how exquisitely penciled, are losing that rich brown color so much sought after in a Partridge Wyandotte. He likes the sharp and narrow barring and color in our first-class Barred Rocks, something, we believe, the English Rocks are not so nicely begarbed with. The more we think over such matters as the above, the more we are convinced that an International Standard for poultry will prove a universal blessing, provided we can get judges on both sides of the herring pond to place their awards as the Standard demands.

Where will the next Newark show be held?

Editor Frank Heck is getting a few left-handed bouquets fired at him by some of his editorial brethren because he had the temerity to criticise the Chicago Show. "Frankie" says these fellows are interested financially in the show, hence their displeasure at his criticisms. Keep the old push ball moving, Frank, it will do much good. Chicago must line up in Class A of shows after this. This reminds us that there are a few other shows that need a little stirring up. There is such a thing as being too independent and regardless of the interests of exhibitors. The latter make successful shows possible, but some secretaries get the enlargement of the coco and think they are it with the big I attachment.

There will be no poultry show at Young's Pier, Atlantic City, this season. This is too bad, as Deacon Ivory Sparks and Uncle Thomas Rackham proposed doing a new marine stunt in the ocean, both being presented with beautiful red silk sashes by the Bambergers, of Newark, to use as bathing wraps. The Deacon is very busy just now, taking care of hundreds of White Wyandotte chicks and dodging rain drops on showery days.

A most welcome visitor to The American Fancier office, last week, appeared in the stalwart form of George E. Howell, whose "Practical Pointers" column in this paper, now, as well as

in past years, has always been enjoyed by those that really know something about chickens. George is all chicken and always has been. If ever a man had practical experience in raising chickens, selling eggs for market, and for a number of years handling thousands of dozens in New York City, Mr. Howell is the real goods. He started as a chicken farmer and is now back again on the old farm, breeding Holstein cattle and supplying the fancy market with choice eggs, laid by a select flock of Leghorns and Minorcas. We will never forget the year Mr. Howell passed in The American Fancier office, at Johnstown, N. Y., the first year of this paper's existence. George and the writer spent many pleasant, albeit, busy hours together trying to get out the paper. It was a case of being bookkeeper, mail clerk, scribe and everything else in those days. But the combination worked nicely and what was lacking in a princely income, was fully made up in the pleasure derived in seeing the child grow up and become a real poultry newspaper.

Another welcome visitor turned up in the person of "Billy" Hammell, of Toronto, Canada. The famous Game Bantam fancier had a few days vacation in New York, and, of course, had to run up to see "Jimmy" Glasgow, at Mahwah, N. J., and talk Bantam for a day. He told us that the "genial James" had a great lot of Bantams and pigeons and will make the fur fly at the big shows next winter. We noticed that "Billy" had a fine Birchen Bantam stag to take to Canada, and it's safe betting that Hammell's string will be in the fight at Madison Square next January. He is raising some very fine Brown Reds and reports a grand pen of breeders of this variety as doing remarkably well, the early chicks being strong and promising, with the Bantam months yet to come and hear from.

There was a great old party held the other night at Short Hills, N. J., in honor of "Doctor Ben" Thorton, the Game Bantam King of the United States. Mr. Fincke acted as host, and that is "nuff sed." It was a glorious night, a fine dinner and a grand time. Some of the invited guests could not get there, but R. L. Hutchings and F. H. Dillingham ran up from New York, and reported a most enjoyable trip. Doctor Thorton is quietly getting his cards shuffled for a big Bantam deal, which if it goes through, bring out a large entry of crack birds at early and late winter shows.

An editorial in the May 5th issue of the New York World gives some interesting facts regarding the American hen. It appears the latter made a record last week. On Thursday, May 3d, there were received in New York City over 40,000 cases containing 15,125,000 eggs. This was almost four eggs each for every man, woman and child in Greater New York, or more than three times the average daily consumption. The value of these eggs was \$250,000. This beats the annual statistics and generous praise of "Old Biddy," by the Secretary of Agriculture, who is quite a hen crank from all accounts. Secretary Wilson reports that last year the eggs of the United States were worth more than the cotton or the wheat, more than all the

Another point made in favor of this new regulator is given in the circular, as follows: "The vital point in the success of an incubator is the absolute control of the temperature of the eggs. In order to accomplish this, it is necessary that the regulator be operated directly from the temperature of the eggs themselves, as in the case with our system, instead of trying to govern the temperature of constantly moving currents of air surrounding the eggs, which is the system followed by every make of regulator heretofore placed on the market. With this regulator the machine can be started at any time, placing in the eggs at once, placing the patent thermometer on the cold eggs, and the operator can leave it with the positive assurance that, when the eggs reach a temperature of one hundred and three degrees, this regulator will keep them at this temperature as long as they are left undisturbed. It makes no difference what the temperature of the air in the machine is. The regulator will take care of that and will supply the eggs with the exact degree of heat necessary to keep them at the proper temperature, regardless of outside conditions." We have placed one of these regulators on one of our most reliable incubators and shall give it a thorough trial. We advise readers of *The American Fancier* who are interested in artificial incubation to send for a circular describing this innovation in the matter of artificial incubation, or better yet, try one of the

regulators. The price is reasonable enough, considering the great value it possesses in regulating the heat.

Placing Bantam eggs in with large eggs in incubators is not profitable; on the contrary, it is bad practice. It has spoilt many good eggs that might have hatched. Even in placing Bantam eggs only in incubators, great care must be taken to get the temperature of the eggs at the proper degree. In some incubators, the hanging thermometer is a chicken killer, as more than one unfortunate Bantam breeder can testify to. It will pay incubator manufacturers to be a little more careful in giving directions for handling the different kinds of eggs that are to be hatched in their machines, especially when it comes to Bantam eggs.

From several sources we learn that April hatches have not been as good as those in March and earlier in the season. Excepting in a few instances, this has been the case on our farm. Weaker germs seemed to be the cause, the fertility as a rule being very good. It was more noticeable in the incubator hatches than in the eggs placed under hens. Some of the hatches by the latter were good when the hen was good, but there are hens and hens, and some are anything but reliable when called upon to perform the duties a well educated feathered lady is supposed to be capable of in a twenty-one day's sittingfest. They evidently believe too much in race suicide.

This leads us to remark that we are now in a season of the hen year when the poor fellow that sells eggs for hatching is being fried on the pan by disgruntled, disappointed, disagreeable and other "D" buyers, that have failed to get fourteen chicks from thirteen eggs. Reputations are lost and destroyed for the time being. But selling eggs for hatching is, and always will be, a more or less unpleasant business, especially when eggs are sold at five to ten per.

The shipping of day old chicks in England is getting to be quite a business, and one that is destined to become profitable and important in this country as soon as the *modus operandi* is thoroughly understood. Several letters have appeared in the Feathered World, England, regarding the best method of shipping such tender charges, and the one in a recent issue by D. Montagu-Turnor, seems to be the best description of the above method we have read. He writes:

"It is most important that the chicks should not be packed and wedged firmly together. Scores and scores of deaths are attributable to suffocation through that very method of packing, and to advocate such a practice is quite a mistaken idea. Chicks when packed should be so placed in their box that there is just sufficient room for them to turn round comfortably. A little peat moss may be placed in the bottom of the box, and the corners rounded off with a little hay.

"This is all that is required, as the boxes sold by up-to-date firms are all scientifically ventilated and made to a certain measure. Chicks will take no harm from the jarring of the train, or handling of the porters (if handled, of course, in a reasonable manner).

"As an illustration of what a chick can stand, instance a brood with the old hen. First she kicks one over, treads upon another, rolls on five or six when dusting, but they all come through it all right, none the worse.

"In conclusion, let me again exhort those who are about to embark on the day-old chicken trade, whatever they do, not to try and wedge and so firmly pack the chickens that they cannot move, else their venture will end in a fiasco."

As Mr. Montagu-Turnor has shipped one day old chicks for the past ten

years all over Great Britain, France and parts of Germany, with success, his opinion is of considerable importance. We should be glad to hear from any of our readers who have had experience in this branch of the poultry business and would also be pleased to receive a description and illustration of the shipping boxes.

We received, last week, from Mr. J. Robert Livingston, Poultry Manager of Biltmore Farm, Biltmore, N. C., a newly devised egg carrier. The eggs were wrapped in paper, placed in a pasteboard compartment box, the latter being suspended in a splint basket by a patented device consisting of stout rubber stays. The eggs arrived in excellent condition, not a broken one in the lot. It looks like a safe package for even the most hard-hearted and careless express agent or messenger to handle.

The next Scranton, Pa. Show will be held January 15-19, 1907. The Scranton Poultry and Pet Stock Association has now been permanently organized and is to be incorporated. It has about eighty members, who have subscribed for some two hundred and seventy shares, at ten dollars a share. A much larger and better hall has been secured for the coming show and at least 1,500 birds can be penned comfortably. The first annual exhibition of the above mentioned excellent association was such a pronounced success, that we may look for the banner show in the Keystone State next season.

Speaking of Pennsylvania shows, what has become of the once much-advertised Philadelphia Show? Have the Quaker City fanciers given up all hope of pulling off a show in that good old burg? We have heard nothing regarding the Pittsburgh Show. The fire that destroyed the building where last year's show was to be held is out by this time and some hall must be available in the Smoky City for a show in 1907. The shows in Pittsburgh have been so successful and well managed in the past, that we naturally expect to see the welcome announcement of another one to be held. Come Messrs. Skiles, Seldon, Moore, Sutch and Hilldorfer, get the ball rolling and prepare for the next big annual. Sharp Butterfield is just aching to get to Pittsburgh and judge the smoke and tell "Joe" Hilldorfer how to breed Black Minors.

Change of Directors.

Messrs. George E. Howard and Thomas F. McGrew, of Washington, D. C., have resigned from the Board of Directors of The American Fancier Printing and Publishing Company, and Messrs. T. Farrer Rackham, of Newark, N. J., and Harry M. Pockman, of Jersey City, N. J., have been elected to fill the vacancies. Messrs. Howard and McGrew found it impracticable to run over from Washington on account of their various business interests, and Messrs. Rackham and Pockman were chosen as individuals who will ably look after the duties of their office.

Bantam News

"The proudest Bantam in any barnyard crows two octaves higher when he is scratching in some other rooster's gravel.

It might be a good thing among Bantam breeders, as well as among others, to hold a series of poultry revival meetings where each one could come forward and tell his experiences in borrowing or lending birds for exhibition. This would necessitate a hall with an extraordinarily large stage, as there would probably be quite a rush forward after the meeting had been formally opened.

Mr. F. B. Zimmer, the Beagle and Bantam wizard, of Gloversville, has been handing out a pretty stiff line of talk in *The American Fancier* lately. He is getting uncomfortably close to some of our soft corns, but let her zip, Zim! We can ride as fast as you can pump.

If Crawford raises the entry fee to \$3.00 per bird, it will take a darn good Bantam to stand the price, not mentioning the competition, and the sale of market poultry at the close of the Madison Square Garden Show will hereafter be discontinued.

No doubt a great many who voted for Auburn as the next American Poultry Association meeting place were unaware that one of the largest State prisons is located there, and an exhibitor caught faking will undoubtedly become a permanent resident of the city.

After reading a recent editorial in *The American Fancier*, it is a pretty safe guess that R. J. Ruliffson, of Rochester, will send "Drev." another dwarfed egg soon. (Nit!). Next time, Rulie, send him a crate of eggs, instead of one, and the editorial page will be held sacred to your memory.

George L. Young, of Brooklyn, Secretary of the National Bantam Association, has proven himself an able and efficient officer. He has conducted the affairs of the Association with honesty and integrity, although he is engaged in the coal business. One cannot resist mentioning the old story of the Irishman in a cemetery, who on coming to a headstone with this inscription, "Here lies the body of a lawyer and an honest man," turned to his companion and asked: "How the devil did they come to put the two in one grave?" Secretary Young is a successful breeder of Black Rose Combs, but will devote his entire attention to breeding white birds when he retires from the coal business.

At the mention of the National Bantam Association, one cannot but think of the immense quantity of valuable timber which it contains. It can boast of an Oke, a Micheltree, some Beeches and a number of Chestnuts.

UNCLE DUDLEY.

"Chilmark Farm"

OSSINING, NEW YORK

The Home of Prize Guernsey Cattle, Yorkshire Swine, and Standardbred Chickens and Pigeons

There is an old adage that it is not what we get that makes us rich, but it is what we are permitted to see that gives us joy and pleasure. So, it is with great good grace that The American Fancier presents to its readers a short resume of an hour's visit that two of its representatives recently paid to "Chilmark Farm," the possession of V. Everit Macy, at Ossining, New York.

It is, of course, to the chickens that the duet of The American Fancier first turned their thoughts, after having agreeably passed the time of day with Charles V. Phelps, the genial, business-like superintendent of Chilmark's broad acres and wooded heights.

That the Chilmark poultry plant is a model one may be recognized from the half-tone perspective view which accompanies this article. The main buildings is two hundred and fifty feet long, and eighteen feet wide, running east and west, and having large wire runs extending to the southward.

The poultry and pigeon stock at present consists of Single Comb Black and Buff Orpingtons, White Crested Black Polish, Single Comb White Leghorns, Barred Plymouth Rocks, Cornish Indian Games, Mammoth Pekin Ducks, White and Pearl Guineas, Homer and Runt pigeons. This will probably be augmented by the best specimens obtainable of Buff Plymouth Rocks, Plain White Polish, Single Comb Black Minorcas, Silver Grey Dorking and Buff Cochins Bantams, for

IMP MASHER'S JUSTINEE (16002)
Official Year's Record 10,450 Milk 510 Butter Fat
J. Albert Lewis, Photographer

"Chilmark" will compete in the big shows during the coming season.

The poultry house is thoroughly up-to-date in every particular, having running water in every pen, heated by hot water in winter, and has a large dressing room, with all the modern fixtures.

Hiram W. Schriver, late proprietor of the Oak Lane Poultry Yards, Chester, Orange County, New York, who has been breeding and exhibiting poul-

try at all the leading fall and winter shows since he was thirteen years of age, is the manager of the plant, and is ably assisted by John Dunstan, a young man who has had considerable experience at the business. In fact, Manager Schriver, is not so old, but he has always been mentioned in the winning columns of the show awards.

The young stock on the farm is hatched with Cypher's Incubators, and

reared in the same make of brooder. Eggs from "Chilmark" are in great demand, and find their way to all parts of the country.

The pigeons have a large flying yard, and are also allowed their liberty. They are bred for squab and exhibition purposes, and have produced winners at Madison Square Garden. The majority of the parent birds were imported direct from England.

One of the delights of "Chilmark" is the large dairy barn, a mammoth structure, which is as comfortable and slightly as it is large and well-proportioned, being of a style of modern architecture and convenience that leaves nothing to be desired, and would fit the ideal of any mortal. Here Superintendent Phelps has a cosy office, not the least attraction enconced therein being the showing of awards that have been gathered in by the "Chilmark" herd, swine and poultry at different exhibitions throughout the country.

The herd of Guernseys at "Chilmark" are the result of most careful study upon the part of Mr. Macy, who personally devoted his attention to the subject at the "Model Dairy," at the Pan-American, at Buffalo. Here ten cows of ten breeds were tested for six months, and the test determined that the soft flavor and natural color of the products of the Guernseys, as well as their ability to economically produce cream and butter, were the desirable features wanted in the "Chilmark" dairy.

Therefore, Superintendent Phelps

IMP. ANTIONETT'S QUEEN'S PRIZE VII (16010)

was sent to the Island of Guernsey to select representatives of the best families and lines of breeding on the Island. The first importation consisted of fifteen head, and later importations have increased that number. There is not a milk-bearing cow on the farm but what has been imported or is out of imported stock, and the excellent work done by the herd attests the wisdom of the selection.

Here are some of the records:

Imported "Masher's Justinee" (16,002), official yearly record, supervised by Cornell University, 10,450 pounds of milk, 510 pounds of butter fat.

"Justine's Golden Queen," 10,241 pounds of milk, 514 pounds of butter fat.

Imported "Beatrice of the Isle,"

A CHILMARK COCKEREL
Single Comb Black Orpington.
J. Albert Lewis, Photographer

(16,005), 8,976 pounds of milk, 518 pounds of butter fat.

There are on the farm the first prize two year old and three year old heifers on the Island; also, the first prize champion, and reserve grand champion at the World's Fair, at St. Louis.

The two young cows whom Photographer Lewis so admirably secured photos of are both entered in the advanced registry, and are making splendid records.

The imported Guernsey bull, "Cora's Governor of Chilmark" (8971), son of the noted bull, "Governor of the Chene," three times champion of the Island, is head of the "Chilmark" dairy herd.

The "King of the Bacon Hog," the improved, large Yorkshire, was chosen to occupy the swinery. The first importation was made early in 1903, and has been added to by later importations. In the fall of 1904 there was also added to the herd the reserve grand champion sow, Summer Hill Dal Empress, XXXI, No. 5,351, at the St. Louis Exposition.

This herd has won championship at New York State Fair Sweepstakes over all breeds at Trenton, N. J. two years in succession, and won 108 First Prizes out of 112 entered for.

The number of prizes won at the leading fairs in the country is ample proof of the good qualities of the herd.

In 1904, out of thirty-one classes entered, "Chilmark" captured all first and second prizes. At the New York State Fair and at the Inter-State Fair, at Trenton, N. J., this herd won over all breeds.

At eight different fairs in 1905, "Chilmark" herd was not defeated, winning all first and second money prizes, amounting to over five hundred dollars.

Running an incubator does not differ from any other machine, one needs but to know how and have a little experience to fall back on. It may be a coincident or even a habit, yet it is noticeable in the few accounts of actual operation made public, the same is invariably accompanied by an apology, not for the writer's forgetfulness, "but for this and that." "If I had done so and so," are common expressions. Now here is a well-meaning poultry authority telling why his machines did not hatch until the twenty-third day, which he ascribes to the fact that he ran them at a temperature of 103 degrees, instead of 104

degrees, as he has now convinced himself.

Granted his thermometers were correct, does any reader believe this was the real reason. It is just as warm in the egg chamber with the thermometer registering 103 degrees of heat on a cold day as it is on the hottest day of July, and with this temperature maintained evenly throughout both periods, the outside weather never can affect the time of hatching.

Should any care to investigate, it will be found that the old hen does well to get an average temperature of an even hundred degrees in the eggs she covers, yet she brings forth her brood at the end of twenty-one days and has no apology to make.

As I said lately, I am satisfied with the deal I get, and when a hatch is run off I refill and start over.

In duplicating a poor batch for me, a friend tells me that if I don't do no better this time I had best throw away my machine. Complimentary to the make thereof, I am sure. In self-defense, I placed some under hens; should the results from them be on a par with the machine I will know it has vindicated itself.

The conditions of the atmosphere, moisture supply, and lots of other things that have to be guessed at, play a more vital part in the result than the mere handling of the machine, and until these are determined there must be more or less of a lottery about the whole business.

Another notch has been cut from the price of eggs, the market has been in favor of the producer all through the spring, in fact, I do not know of any other branch of agriculture from which the returns have been so gratifying. More and more producers are making a speciality of new laid eggs, that is, they are finding the customers who are willing to pay the extra price, and shipping direct. Every egg thus disposed of is removed from the stagnant market channel that slowly drags along toward the consumer. The poultry raisers should do their part to maintain the pleasant relation now existing with the handling of their product, an increase in size, a careful grading that in time will be bound to secure the confidence of the receiver, and above all the ability to ship in the winter months, all these are bound to promote the industry and add to the wealth of the poultry-keeping community.

Geo E. Howell

WEED'S WANDERINGS.

First this morning, we will go to Niversville, N. Y., and see J. F. Van Alstine and his Wyandottes. The readers of The American Fancier have all heard or read of his winnings. We have simply to add that he has fine stock, kept in fine condition, and the vigor of his youngsters show that his breeders are as they should be.

We stop over one train at Canaan to see F. F. Stevens and his Buff Bantams, then to Danbury, Conn., and meet Mr. Charles H. Brundage. Mr. Brundage is simply snowed under with orders for eggs and stock, which explains his withdrawal of "ad" from The American Fancier. He immediately took us in hand and introduced us to the following fanciers: Mr. R. Ellis, who has some fine Barred and White Rocks; Mr. George M. Silverwail, who, when it comes to the hatch act with an incubator keeps them all guessing; Mr. W. B. Eastman, who has White Wyandottes good enough for any one; Mr. Ben. Brundage, who is simply a past master in snake killing. As we were looking at a fine young brood of Wyandottes, we saw a large water-snake stealthily approaching to have a chicken breakfast, but "Ben" was there, and catching that snake by the tail, with a vigorous swing he snapped that snake's head clean from its body.

Next, to G. E. Brundage's, who differently from his brothers, has taken Barred Rocks, and certainly has great birds, and some fine youngsters started.

Carl Lueder's Silvers have the blue ribbon stamp. He also has the best developed young I have seen.

Mr. C. W. Clarke ties up to White Wyandottes, and very few have better.

Mr. G. E. Eckert, and Mr. Hall, his next door neighbor, are Buff Rock enthusiasts. Danbury certainly feels the effect of having a successful Poultry Association.

Geo W Weed

PIGEON FANCY

EDITED BY H. M. POCKMAN

IMPORTED THIRD PALACE—SIRE OF MANY AMERICAN WINNERS

Mr. H. J. Bailey, of Passaic, N. J., will probably make his debut in the Pigeon Fancy next season. This gentleman has just received from England quite a shipment of English Owls. Included in the lot are some specimens of high quality. We congratulate Mr. Bailey in having the nerve to purchase these birds, and hope he will be the means of bringing out a good entry of this lovely variety, and strengthen the fancy. At a recent auction sale of Owls in England, it was no uncommon occurrence for a fancier to bid from \$125 to \$200 per bird.

We publish in this issue a very interesting letter from Mr. George E. Rowland regarding some facts about his entry at the last Boston Show. It was rather a hard proposition he had to swallow with such specimens, but when the bell rings for the 1906-07 exhibitions this fancier will be there, and there will be "something doing."

Dragoons are a variety which are gaining rapidly in favor with American fanciers. In England this is one of the most popular varieties. At the recent Palace Show, over three hundred being on exhibition. The quality throughout was of a very high order.

The Dragoon Club, Mr. F. H. Wright, Secretary, has accomplished a great deal in this country in bringing this variety to the fore by offering numerous specials, silver cups and cash prizes; also, seeing that they receive the proper classification at our shows.

This Club is supported by the best breeders of this variety. Their members have imported at a big expense some of the best in England.

Dragoons are very hardy, fine feeders, and breed very true to type, making them ideal exhibition birds.

Next issue we shall publish a Dragoon article together with a cut of one of the best Dragoons out.

SEASONABLE HINTS.

Gentian Root makes a very good tonic. About a quarter of pound dissolved in a gallon of boiling water, then let stand for a few hours, strain. A teacupful added to a gallon of water will act as a good toner.

Always use a disinfectant in the

loft. A good plan is to sprinkle the floors with a carbolic acid solution. One pint of crude carbolic acid mixed with two pounds of soap and boiling water. Thoroughly mix these, then add about two pails of water and you have an ideal disinfectant for your loft. Have the floors sprinkled about twice a week during this time of the year.

Pigeons like a variety of food. Remember this, and give them a change now and then. A little green stuff, such as lettuce, watercress, etc., will be beneficial.

A fine whitewash is made by using the following proportions for mixing: Mix about five pounds of ordinary lime in a pail of water, and while it is slacking add one-quarter pint of flour mixed with enough boiling water to make it thick. Thoroughly mix these together and apply with a good sized brush.

WASHING.

For one to undertake to wash a pigeon for an exhibition who has not previously had experience, they had better let the bird take a natural bath, and not spoil what chances the bird might have. But to properly wash an exhibition bird will improve it wonderfully, the colored varieties just as much as white. The young fancier better gain his experience with birds not intended for the show, least he be disappointed. The room should be at a temperature of seventy degrees, wrought by a good bright fire. Have everything ready before you begin. Three tubs of water, first warm, second tepid, and the third cool. Immerse the bird in the first, just allowing the head to be above, and allow to "soak" a short time. This will loosen all the dirt, then with a sponge, plenty of soap (Ivory is one of the best—do not use the common brown), lather the bird, always remember to rub with the feathers. Be sure every part has been soaped, and is thoroughly clean before taking the bird out. When you do this squeeze as much of the soapy water out as possible. Now plunge the bird in the second and rinse it, getting all the soap out of the feathers. Then just dip it a few times in the third and this will complete the bath. With a large sponge absorb as much moisture from

the plumage as you can, and after this dry with a soft Turkish towel. This should be done very carefully, as the feathers are easily spoiled when wet. After this the bird may be placed in any exhibition cage, with clean sawdust, and placed before the fire. To protect the bird from draughts, see that the three sides are covered. I would advise washing a few days before the show. In washing colored varieties a few teaspoonfuls of glycerine added to the third process will improve the color and add lustre.

MR. ROWLAND'S REPLY.

Editor American Fancier:

When the error crept into your comments, referring to the judging at Boston—that the Crystal Palace Jubilee Cup Fantail winner was first at New York, I meant to ask you to correct the statement, but considering the matter of trifling importance, neglected to do so.

Now that I have been "called," I would like the space to say that I had no idea at the time we were talking that anything said would be published—for I was speaking generally, and only mentioned Boston casually. I cannot deny, nor do I wish to take back anything, though I will qualify as to my reasons for dissatisfaction.

In the first place, I do not claim that the bird referred to should have won, but, in the young class at Boston, I penned six young whites with the following records: No. 1 Hen, first cup and medal, and runner up for Lord Mayor's Cup, for the best pigeon in show at Dairy; first and Jubilee Cup, Challenge Cup, and two gold medals, Crystal Palace, (twenty-nine in class, two hundred and sixty-seven Fantails in show). Pigeons and Poultry says of this bird: "A real gem, the very best Fantail we have ever seen." First and certificate, York; first Newark, and first Edinburgh, the only times shown and therefore never beaten till Boston. No 2 Cock, second Dairy; third Beith; first and gold medal, New York; only times shown. No. 3 Hen, second Grand Central Palace and fifth New York. No 4 Cock, first Grand Central Palace and fifth New York. No. 5 Hen, third Providence (18 in class). No. 6 Hen, first Altrencham; first Beith (Blair, Judge), first and two specials Northampton, special for the best Fantail in show (Gray, Judge), first and two specials Johnstown, special for best bird in show (Hutton, Judge); first and two specials Iverness; special best young bird in show; very highly commended, Crystal Palace; fourth New York. This latter bird is a full sister to Palace Hen.

The English papers without exception proclaimed the Palace winner the best Fantail ever seen. In Boston, the reason given, I understand, for not placing the bird, was that it "lacked substance."

Now I do claim, with a team of such evident quality, and only one of them, the Palace winner, out of condition, that it was quite impossible to not get a single mention unless the judge leaned to large-type birds. Then, of course, I could not expect to win.

I will admit that the winner had a beautifully laced tail, as were very many of the birds at the show, while mine was shown in natural state; but I hold that a judge should not be influenced altogether by fine "hand-work."

It has been said that the Palace winner had a split tail and was wet from

washing when judged. This I refute, for the bird never had a split tail, and never will have, for it is very full, double feathered. As for the wetness on the rump, my shipping boxes stood in a driving rain at Boston, and the birds were wet from that alone. I have tried to acquire and breed the smallest type, and as we get the suggestion that large birds were favored, I cannot see my way to another sound beating by again showing at Boston under the same judge. Because one owns one of the acknowledged best varieties of Fantails in America, it does not infer that he must in consequence be entirely capable of judging all varieties.

I say there were mistakes in Boston, and can hardly believe that we were all satisfied. It is all right to take one's medicine at a show, but please, the dose may be too big to swallow.

GEORGE E. ROWLAND.

SHORT CHICKEN TALKS.

Pure food always.

Eat your old hens.

Egg foods make eggs.

The hen is a good thing.

Free range means less feeding.

Exclusive grain diet never pays.

Open an account with your hens.

Profit by utilizing others' wastes.

Prevent rather than cure cholera.

Egg-producers increase the income.

Prompt action saves many a calamity.

The egg fowls have a type of their own.

Clover is a great helper in making eggs.

The hen pays well when given half a show.

New blood occasionally is spice for the whole flock.

Fresh eggs command a ready market on a cash basis.

Deterioration of the stock means beginning all over again.

Fowls must have comfortable quarters to be at home for laying.

Vegetables should play an important part in the feeding of fowls.

The important parts of the poultry business should be done by one's self.

Mismanagement is a bad practice to follow; it is responsible for many dire results.

If you are raising ducklings, it is well to remember that a duckling is about the easiest thing drowned in the poultry line. It cannot stand much rain, neither should it be allowed in the water until it begins feathering.

When eggs are laid outside the nests there must be some reason for it. There may be an insufficient number of nests, or some of them may be too light, or too dark, or infested with vermin. The cause should be searched out and remedied as far as possible.

Don't buy cheap or inferior stock. Get the best or none at all.

About every poultryman that has tried to raise poultry in the orchard has been well satisfied with the results.

The trap-nest is said to be the greatest friend to the poultryman since Noah built the Ark.

The crop-bound fowl is usually the result of careless feeding.

Although the days are getting warm, the nights are cold, so the young chickens need warm and well ventilated roosting quarters.

These are the days when body lice and mites begin to get in their fine work. A close watch should be kept on both fowls and premises.

BROWN'S BUDGET

The more variation in food for both old and young poultry the better. The seeds of all legumes, such as peas, beans, etc., contain elements of sulphur phosphorus and other salts. Any fruit that poultry will partake of is apt to contain acids that are health promoting. Ripe fruits can be allowed with impunity, but green fruits sparingly.

Some people declare hens are egg machines, but some of their owners are too mean to give food enough to keep the "machines" in even good running order. They are the kind of people who answer advertisements offering something for nothing. Their hens should tell them such ideas are a myth.

What became of the 10,000 capacity Leghorn farm that Hetty Green's son Eddie was establishing, or did do so, near Terrel, Texas? Green is a good name to start in on such a scale and Texas might be large enough. Can any of our Texas readers let us know how this Green adventure has done?

An exchange says that "a California woman has just paid a mortgage on her farm by frog-farming." She has a one hundred and fifteen acre farm, which has on it three large ponds with bullfrogs by the thousands in them. She ships these chickens—the U. S. Government classes frogs as poultry—but they should be classed as "spring" chicks—to all parts of the country, and abroad too. She is evidently successful notwithstanding the croaking connected with her business.

"Fancy" fowls on the farm is in some sections becoming the rule instead of the exception. What does it mean? Very much indeed. It means more meat pounds at same age for the same or less cost, more eggs and of size and color uniformity that makes them sell faster and for better prices. It means more slightly flocks and better satisfied farmers.

Farmers are tying to incubators pretty snugly too, I tell you. Old Bill-ups said the other day at the Cross-roads post-office grocery: "I'll be gol darned ef the hens haint having of an easy time hereabouts. Every tarnal farmer I know has got one of them inkerwhatacallem mersheens, cept Cy Skinner an he's too close-fisted ter buy coal oil or he'd run one—that is ef some cuss 'ud give it to him."

An early spring report in the Maine Farmer tells of an egg on exhibition at a store on Factory Island, Saco, Maine, "that scaled ten and three-quarter ounces and measured eight and one-eighth by eleven and three-eighths inches. The hen responsible for that sample was a cross of Indian Bantam and Plymouth Rock.

Don't throw away the horse-radish namings, boil them with the vegetable mash for the hens. If the hens

are short of greens they will eagerly eat the pieces in the raw state. In fact one should always utilize the vegetable wastes by using them for poultry feeding.

It will soon be time to see a biddy come straggling homeward with a small brood, wild as partridges. You've never missed her, and may have seen her occasionally clucking around at feed time—but she always gave you the slip and hid herself to her well-hidden nest. 'Twas ever thus.

The express company messengers are now in their glory, making football stunts with baskets of "eggs with care." What do they "care"? Isn't it about time poultrymen should arise in wrath and fight for a postal package law that would bring the express companies to a sense of their responsibilities. United effort would most certainly hatch out evidence enough to probably develop into something that might start a move that would result in success.

It is the man who doesn't haggle at the price or try to buy lower when he visits your poultry yards, that makes poultry raising a success. The man who wants something cheaper generally gets the kind that makes a doubtful start, and his finish comes soon and sure.

Good results are usually the reward for intelligent methods, bad results the lack of it. We often see these things classed as good and poor luck. Deacon Thrifty is thorough in all his methods; feeds the best feed he can get; provides good accommodations for his flock. Farmer Slowgo runs everything on the slap-dash, hap-hazard method; feeds any old thing or nothing; hens get shelter any old place. Deacon has "good luck," is successful. Slowgo has "poor luck," is unsuccessful. Each man is rewarded according to his methods and work. Luck is a myth.

A friend of the incubator, in an exchange, gives the following advantages of incubators:

"An incubator breaks no eggs and hatches no lousy chickens. It is always ready for business while in late winter it is difficult to find broody hens to hatch early chicks. Every first-class machine, and there are several of them, is self-regulating within one or two degrees, so that if adjusted at 103, the head will not go above 104 nor drop below 102. Moisture, ventilation and the application of heat vary in the different machines, but if the manufacturer's instructions are carefully followed, no trouble should be experienced in hatching a large percentage of the fertile eggs if they contain strong germs."

Lookout for sudden showers when you have chicks in coops on the runs.

FANTAILS MAGPIES

GEORGE E. ROWLAND, P. O. Box 24, Jersey City, N. J.

NO BIRD FOR SALE UNTIL NOVEMBER. LIST READY SOON AFTER.

Locate the coops so that running water will not get in them. Chicks that become suddenly drenched in cold rains soon lose vitality.

The spring fever cleaning should now be at its height. The whitewash brush should be in use. Coops and houses inside and out should be gone over. Roosts coal-oiled, nest boxes cleaned and nesting material burned and new take its place.

Charcoal is specially valuable for fattening fowls, it aids digestion. Charcoal should be accessible at all times to fowls and chicks.

If the hens have to be confined to bare runs while the garden is being planted, let them out for an hour or so before they go to roost. They will keep busy picking grass and weeds and will do little if any scratching.

Don't forget to make liberal use of air-slacked lime on all the runs. Where gaps are experienced good heavy liming will somewhat lessen the trouble.

Remember that neglects are penalized in poultry keeping same as other occupations. What you do, do thoroughly or else complain not from the lack of expected results. Good results don't come from poor work.

The shtrangest oidea in the wurruld to me,

That is taxin' me noodle at presint, Is how can a poultryman make it to be,

That a chicken is dressed, when it isn't. —Yonkers Gazette.

Conveniences are great time savers. Where there are many poultry yards, gates should be made where access can be had from one yard to another without unnecessary steps. Arrange to have the water vessels in shady places. This is another time-saver, as the water will longer keep in condition for drinking purposes

There is always a tendency to enumerate the expected juvenile arrivals from the eggs before their advent from shellidom. It is often the case to expect more than is realized, but as we seldom realize more than we expect—unless we figure out on paper the possible profits from a flock of hens. Mishaps, miscues, mistakes and other misses are not figured in—the calculations are made with a sunshine pencil. But even so, a sunshine picture looks better and is more natural with half-tones and shadows. Use hot-air judiciously.

G. O. BROWN.

Parkville, Md.

SPECIAL CUT PRICES

For the remainder of the season we reduce price of eggs to \$1.50 per 15; \$4 per 45, and \$8 per 100. This is an unusual opportunity to get high grade eggs at a very low figure in good season. You'll get a fair deal here. Our matings this year are very small, only ten females to a pen—quite a number of them prize winners. Short backed, deep bodied, full breasted, snow white birds that breed the kind we all like to see. Some choice cocks, cockerels and pullets left that we will sell at a very low figure rather than carry over. Write to

POPULARIZING DRAGOONS

T. J. Ambrose, "Pigeon and Poultry," England

7 leaps and bounds this fascinating breed is forging ahead. The club, a model institution, recognises that the encouragement towards perfection of the breed is not their sole aim and object. They exist to encourage breeders of all grades, and have recently framed an arrangement whereby shows providing a certain number of price limit classes for Dragoons are to have a medal. Approved judges will naturally be a condition of the arrangement. Not only that, but I trust the whole amount realized above catalogue price, should an exhibit be claimed by more than one claimant, will go to the society under whose patronage the show is held. This should effectually checkmate these classes being abused as they too often are by those who utilize birds of far greater value, win the prizes and then claim the birds back, and by means of fifty per cent. of the increased price safeguard their own pocket. Another reason, too, why Dragoons are booming is because those interested in the variety are ever willing and ready to frankly discuss all that appertains to the breed. Keen as mustard over the birds, but yet respectful for the personal feelings and opinions of each other, a point too often forgotten in discussions on Fancy topics. What is the secret of this success and club government, some may ask? Respect for principle and indifference to persons. Hobbyists of great prominence are ever ready to regard and welcome the opinion of lovers of the breed, accept the evidence and appreciate it for its weight, and not acknowledge it as some I fear may do in other sections, only when it comes from favoured circles. Dragoon enthusiasts govern in the interest of the breed and not for the advantage of individuals. There, and there alone, is the secret. The annual subscription, ten shillings, unfortunately is rather exclusive, but not in proportion to the benefits derived. Mr. J. Smith, 35 Barry Road, East Dulwich, London, is the honourable secretary, and will be glad to furnish particulars of the club to any enquirer.

Is the breed suitable for novices, is oftentimes asked? I say decidedly so, but not if a novice thinks that all one has to do is to simply utilise any premises, buy the show birds, keep them clean, simply feed and water them, and pack them off to a show. Dragoons need preparation and constant attention, and it is just as absurd to think they need no preparation as it is to suppose that Tumblers, Fantails, Turbits, Carriers, etc., are shown just as Nature provided them. One point, however, must be impressed upon the hobbyist who commences with Dragoons. It means constant attention.

Courtesy of Pigeons and Poultry, London, England

Shown very successfully by Mr. T. J. Ambrose

Perserverence will have abundant weight—sticking to it, shall I say? Few breeds spell ruin as quickly as do Dragoons if neglected, and yet few I am certain are more hardy if a proper selection be made, and these kept under conditions calculated to suit the variety. Damp and draught are fatal, and yet cold makes practically no difference to them. Abundant air and sun is an absolute necessity to maintain that fitness so desirable to score in the show pen with hard colours. Trees and the locality where water abounds should be avoided, a humid damp atmosphere being most detrimental. Absolute liberty is in my opinion not advantageous, as it tends to increase length of feather, and that is by no means desirable, especially nowadays. Reasonable space is essential, open wire aviaries, in addition to comfortable sleeping quarters, the former flights so erected that both the sun and air can have direct play upon the birds. This to a very large extent maintains the damson cere that goes to fascinate breeders, and furnish an otherwise good headpiece. Naturally damson cers must be bred for; that is, this beautiful attribute must be strongly in evidence in the strain of the parent birds, or better still, present in the specimens you are breeding from. Abundant perch room should be provided, this preventing the birds somewhat from indulging in their natural proclivity, continual fighting.

Another advantage, too, which should always be maintained, is abundant room. Never crowd your birds into limited space. If so, continual fighting at roosting time always follows. Never disturb the birds more than is absolutely necessary by changing from one loft to another. This is the cause of frequent quarrels and much disfigurement. In transferring a show bird or two to new quarters, it is well to remove the usual occupants for a day or two, blocking up their favourite roosting quarters the meantime, returning them to their own perch late at night. This, too, is a wise plan when birds are away at shows, it prevents many a quarrel that would otherwise happen, and with birds of a natural quarrelsome disposition, therein lurks a great danger. Some may question why I lay such stress on this point. Simply because this continual squabbling destroys the bloom and beauty of the head points, and thus minimises the value of the bird as an exhibition specimen. So determined will these battles become sometimes, that permanent injury results, whilst oftentimes a bird is injured to such an extent as to spoil it for show for a long period. Old cocks with much wattle are best kept to themselves. If housed with younger birds, especially yearlings, impromptu battles with no time keeper is declared between heavyweights and lightweights, and finishes usually with a

need of much sponge, water, and boracic powder for the heavyweight.

In selecting a stud, great care is needed. The best are always cheapest, at least that is my experience. The difficulty naturally is to decide which are best for either show or stud. The most successful breeder is he who possesses the greatest powers of selection. This perhaps by some may be considered a natural aptitude, but to my mind the greatest governing factor is a combination of a love for the breed, the power of looking into the future, and great pertinacity. Observation is a splendid educator, and mental or otherwise you must jot down the results of every step you take as a breeder, to say nothing of remembering what your winning adults were like as first and second year birds. Possibly they were not even regarded as show birds, much less winners, no doubt due to the craze for bulk. By so doing you profit perhaps more by your failures than you are encouraged by success. Type, however, must be the first consideration; a short, thick-set pigeon, free from angularity. Insist on this, even if the specimens lack weight, i. e. are not stout. Attach more importance to the stoutness of such. The strength of the lower mandible influences me far more than the upper. I value hens greatly that carry the weight of such to the extreme tip, finish bluntly, and show no tendency in a downward direction. Down faced or long necked birds are in direct conflict with modern requirements, and should be avoided as much as possible. Depend upon your hens more for strength and structural properties, your cocks for colour, eye and quality. Naturally have abundant good properties in both birds if possible, but these are both difficult to obtain and expensive to boot. Select if available birds that pose well, stand well up on their legs, and demonstrate a proud swagger-like appearance. Don't however, confuse bad carriage with shyness, as many birds show badly when first placed in a show pen, correct carriage following greater familiarity with their prison-like surroundings. A crouching attitude, however, in a Dragoon is an abomination. The bird must pose, stand at attention, otherwise in my opinion he is a moderate specimen, lacking one of the chief characteristics of the breed. Avoid birds that are poor in colour; bad colour is a bad point for breeders short of experience to set right. Colour of eye should be carefully watched, as there is scarcely any other striking feature so fleeting as colour of eye. Somewhat influenced by climatic conditions and the health of the specimen, fascinating ruby eyes

will fade away to nothingness if the breeder does not pay great attention to the point. Observation forcibly impresses upon me that the maintenance of such is largely influenced by attention to strain, avoiding as far as possible breeding from old birds whose eye colour has considerably weakened. As I pointed out before, stamina largely influences the brightness of the eye, but the value of such from the breeding standpoint are those that have the least orange around the pupil, and it is astonishing how few are entirely free if closely scrutinized. Using younger birds in the breeding loft, say yearlings and two year olds, I find better quality ceres, and these of a darker shade are forthcoming. Not only that, the colour of eye is kept brighter for a longer period with a thin hard cere than it is with those thick flabby ceres that do so much to dishearten the young Dragoon enthusiast. A word in passing, remember that if you continually use birds the age mentioned, you will have either those hard guttery wattles or those with just a thumb-like impression that appear so hideous to the eyes of anyone favouring a well finished head piece.

At this juncture it is well to advise those who aspire to the exhibition pen as to the means best calculated to get their birds into show form. This must not be left until the last minute. A Dragoon should be kept fit, rather than made fit. To do this, however, persistent application is the best policy. Carefully look over your birds at least once a week. A lantern after dark in their roosting quarters is an excellent means. Adult birds should then have their ceres and wattles examined. In the cavities of both ceres and wattles, cheesy-like secretions will be hidden, and must be carefully removed with the finger nail. At the same time wattles should be worked with the thumb and forefinger into the desired peg-like shape, the bird being held in the left hand against the body, with the tip of the thumb on the top of the skull, keeping the wattle well forward in the meantime. By so doing, wattles that would be frightfully ugly can be greatly improved, whilst a good shaped one can be moulded almost to perfection. At the same time I know of no artificial method that can produce a correct wattle. These must be bred for, and then the thumb and finger persuasion is sufficient, except sometimes a superfluous growth may need nipping in the early stages with a pair of scissors. As an example the wattle which appears in the illustrations of the headpiece given this week of my silver chequer cock has been brought to its present state of perfection, and I give my word that on that bird I have never drawn blood. It is this cheesy matter, however, that causes so much trouble as regards sprouts in the ceres. Once these grow and are left unchecked, the worries and troubles of a Dragoon hobbyist commence. In the early stages these should be removed, but only by someone who has had previous knowledge or seen such work done by an expert. This some describe as faking, but if left alone it will effectually ruin any specimen, to say nothing of the suffering set up the inflammation, caused by the malformation of the cere. Jewing, the wattle on the edges of the lower mandible, too, should be removed. This, however, is only necessary in the older birds, and to any extent only with coarse birds that should

always be discouraged. The treatment is similar to that with sprouts, and can usually be done by the aid of bloodless surgery. If greater attention, however, was paid to type and quality by judges, especially those who officiate at the all round shows, paying less attention to bulk and stoutness of beak, breeders would produce birds of type and quality, and there would then be little need to remove the jewing. All should strive to this end, because such birds are a much greater pleasure to look after, whilst for the novice it is highly important.

Before a show, birds should always be penned and well trained. In damp weather this is more essential than when the climatic conditions are dry and bracing. Birds penned in a nice dry pen room after a spell of wet weather, will improve amazingly; it hardens up their ceres, tightens their feathers and brightens their eye, whilst the steadying influence will improve the bird amazingly from a show standpoint. Dragoons must be steady, so that the correct pose can be seen at a glance, steady, yet bold and defiant, and this you must train your birds to display. As is well known, a blunt end to the beak is desifable, something resembling in finish the shape of a tick bean, but not as pronounced quite. A small file is the best for this purpose. The top mandible should be filed first, and then the end of it reduced so that it exactly fits the lower mandible. The latter should not be touched in any way, if so imperfect fitting is usually noticeable. Some birds need little attention in this direction, whereas others grow very parrot-like, and what is worse, become almost malformed if continually fed from a hopper. Thus prepared, the bird is ready to fight its battle, and my only reason for giving these particulars is because it is often asserted that the novice does not know how to prepare a show bird. Everyone has to have a start, and in my early days I spent many hours at the best shows studying the winning birds, trying to solve the problem of how show form was obtained. My deductions were useful, and these added to whatever experience I have gained since, have clearly proved to me that scissors must of necessity be used with heavy wattled varieties to check malformations, the neglect of which creates abundant disease, not that this excuses any of us, for all the liberties we take. A beautiful Dragoon, however, is bred, not made, and those who give the prizes should only recognize birds of abundant merit and free from any traces of artificial preparation.

A word or two as to present-day requirements may not be out of place. Watch for youngsters that are first leaving the nest to avoid scalping. Remove them to a nursery; an inside place if the weather be bad is best, keeping such for youngsters about the same age, removing those that are making progress and becoming quarrelsome to quarters more suitable for birds of greater development. When the parent birds are due to hatch or the squabs show any inclination to support themselves, turn them out of the breeding quarters. They do better away, and should be fed on the same food as hitherto, with an abundance of grit within reach. Maple peas and tares, and these of the best quality, are my favourite feed during the breeding season, with a few tick beans substituting the tares when the birds are moulting, and during the winter time.

On no account coddle your birds, and those that are not cured quickly by some simple remedies, remember you are better without. Cleanliness, fresh air, and plenty of Epsom Salts will aid you in keeping a clean bill of health, whilst abundant information is obtainable from Dragoon hobbyists if they once realize that you are worthy of such assistance, and appreciate the principles of good fancier fellowship.

These notes apply generally to all colours, but yellows and reds must naturally be protected from the sun, covered in aviaries or shade of some kind being an absolute necessity to protect the colour.

That Buff Wyandotte Challenge.

Editor American Fancier:

About April 1st, I issued a challenge to all Buff Wyandotte breeders of America, and mailed a 1,000 copies of it to the different breeders of this variety. In it I said I would like to be one of the seven (7) or more breeders to donate \$25.00 each, in gold, to be given as a gold special for best three cocks, three hens, five cockerels, five pullets and three pens, at Madison Square Garden, January, 1907, and that I had in mind seven of the most widely known breeders, as follows:—Simon Beuth, R. W. Sturtevant, W. R. Wooden, Andrew Riddell, L. C. Piser, A. C. Hawkins, and W. T. Lord, and that if these seven breeders had enough sand, we could see the largest and best class of Buff Wyandottes ever shown, etc.

In the April 28th issue of the American Fancier, I see that Mr. J. E. Burt, of Athol, Mass., takes exception to part of what I had to say, and answers as follows:

"Evidently Mr. Lord does not consider me eligible to compete with other breeders, as my name is not included in his list. Perhaps if Mr. Lord had inserted in his challenge that the birds to compete must have been bred by the exhibitor (not bought or borrowed), it would have been easier to have found out who is breeding the best Buff Wyandottes. Perhaps Mr. Lord intended to cut out small breeders like myself, by requiring them to make such a large entry as he named," etc., etc.

Mr. Burt concluded by saying, "Come, Mr. Lord, modify your challenge, and let us all in and perhaps some of us small breeders would have the sand to put up."

Now, I admire Mr. Burt for coming right out boldly, and what he says is practically what I intended to insert in the challenge. Before going any further, I will state that the challenge is meant for every breeder of Buff Wyandottes, big or little. The reason that I named the seven breeders in particular was, that I did not want either one of them to find a hole to crawl through, and to those seven breeders let me say that if Mr. Burt has enough sand, why not you?

For the benefit of Mr. Burt, I will insert in the challenge that all birds to compete in this "scrap" must be bred by the exhibitor and not bought or borrowed. I will not, though, reduce the number of birds to compete—three cocks, three hens, five cockerels, five pullets and three pens—as anyone should be able to show up that number, and if anyone desiring to compete can't raise at least five cockerels and five pullets, fit to show, they have no business in the race. Furthermore, I will say that anyone

intending to enter this scrap, must deposit the \$25.00 in Mr. H. V. Crawford's hand on or before December 1, 1906.

I am satisfied that Mr. Burt has written in good faith, and will stand by what he says. Let me say that if anyone else has any replies to make, I would suggest that they confine themselves to the point, and make no bluffs.

W. T. LORD.

Troy, N. Y.

An Old Polish Breeder Speaks.

Editor American Fancier:

I notice in the last issue of your paper an article on Polish containing some things, I am very sorry to learn, as according to my experience they are incorrect, in so far as they concern White Crested Black Polish. I cannot say about the other varieties. I have known Polish since I was a small boy, when my father imported from Canada six pullets and a cockerel, about 1843 or 1844. I have been a breeder for quite a number of years, and have always regarded them as hardy fowls and good winter layers. Have never found it necessary to isolate them during the moult, and have never taken pains to keep them out of the wet, unless it was some time when I didn't want their crests to get dirty. I am acquainted with a number of other Polish breeders, and have never heard of their separating them during the moult. It is not customary in this country. They also consider them hardy and good winter layers. Now, Mr. Editor, I am sure you don't wish to publish anything detrimental to any particular breed of fowls; and don't you think the aforesaid article, by one who signs himself "A Breeder," is detrimental? I can not say but what his article may be correct for England, but it is not for this country, and must give a wrong impression to many not acquainted with the bird.

L. M. STANTON, M. D.

Wellsbridge, N. Y.

Another Buff Wyandotte Breeder Breeder Heard From.

Editor American Fancier:

In regard to Mr. Lord's challenge to the Buff Wyandotte breeders of America, I also wish to express the hope that Mr. Lord will modify his challenge so as to let us small breeders in. Would suggest that the contribution be \$10 each and the special be awarded to the best cock, hen, cockerel, pullet and pen. Now, I hope the Buff Wyandotte breeders will let the matter drop, and if Mr. Lord don't modify his challenge let the Secretary of the Club take it up and I am sure many of the small breeders will put up, and we will have the best class of Buff Wyandottes ever shown at Madison Square Garden.

WM. EDGAR.

So. Bethlehem, Pa., May 6, 1906.

Fowls must have exercise when confined. To provide this, scatter the grain food in the litter on the floor and force them to keep constantly at work scratching for it. This will insure a free circulation and perfect digestion. Early-hatched pullets make the earliest layers.

Bulky food is as necessary for fowls as animal.

When the chick becomes chiller dies. Thousands of chicks die annually from this cause.

Farm, Field and Garden

BY G. O. BROWN

If you think farming is the hardest kind of work, when you go to the city watch some of the porters in the big shipping houses. All day long they tug with heavy articles. At night they swelter in their hot, stuffy homes. There is no monotony in the farmer's life. He changes from one thing to another, and each has a refreshing nature attraction. At night he enjoys the pure air, often laden with the fragrant odors of new mown hay, the fruit tree blooms, the orchard fruits in fall, and from the lawn the incense of flowers.

Very little barbed-wire fence is now to be seen on the farms. It was a veritable barbarous affair, often seriously wounding live stock. The era of wire fences is at its height, and has, and will continue to be a great source of economy. Years ago fences were the most expensive part of some farms.

Some farms adopt a soiling system. The stock is kept confined in stables or yards and fed there. This does away with much fencing. There does not have to be fences between fields of different crops. The spaces that would be occupied with fences is therefore crop-producing. Saving fence expense and raising a crop on the space is indeed a good economic step.

If you have a roadside watering trough on the farm keep it clean. Whether you may consider it of little value to you personally should make no difference. Remember how your own team enjoys such a luxury as a trough sheltered by the friendly outspreading branches of an elm. The water comes rippling down along the old moss-covered V-shaped shoot, making a rythmical tinkle as it trickles into the trough. The day was hot, you uncheck the dust begrimed horses, and while they drink you take that old "bandana" and wipe your forehead, and enjoy the breeze that cools it. Some one will do the same at your farm watering trough.

The man who farms well, will do better than the one who aims to see how much land he can farm. Often the amount of manure or fertilizer used on twenty acres if used on ten would produce an equal yield of crops and of higher quality. This too with half the labor and seed.

What are you doing to protect the birds on the farm? Birds are valuable friends to the farmers. The few cherries and berries they destroy is more than counterbalanced by the myriads of destructive insects they kill.

It is always in order to overhaul farm machinery and make needed repairs in advance of the season in which they are to be used. This will often save vexatious delays when loss of time may be costly too.

Now is an opportune time to dig out the borers of the fruit trees. Remove the dirt for four inches or so around the trunk of the tree. Cut away some of the killed root bark

where the borer has been working. Next insert a small stiff wire in the runways and kill the pests, then throw back the dirt.

Don't forget that a mulch is beneficial around small fruits, especially those recently set out. Always loosen the soil before applying the mulch.

Aim to prevent weeds from going to seed. Destroy them whenever you can. A spade made of a chisel to cut off weeds below ground is an effective method. If there are certain patches in the garden where the weeds have "got away" with the crops, after a rain pull them up roots and all and throw them in the pig pen.

Apples cost more now in Baltimore than oranges. A large orange is sold for three cents and an apple of the same size is rare to find and brings five cents. Now is the time when the cold storage trust fiends are reaping a harvest.

There is a wonderful amount and superb quality of garden products now in Baltimore market, such as asparagus, peas, cauliflower, cabbage, tomatoes, potatoes and many other things from farther South. The local market gardeners are envious admirers. Their opportunity will come later, but alas, not at present prevailing prices.

Dandelions make excellent greens. Where the lawn is infested with them have greens every day for dinner. A table knife run in the ground an inch below the surface to cut off a dandelion is the best way to get rid of them.

Plenty of root crops in the garden mean later on good vegetable dinners. Don't complain of lack of variety on the home table if you neglect to make the garden a good supply store to draw from. Health and good nature often shake hands across the dining table that is well supplied with fruits and vegetables.

The cane fruits do better if they have a trellis or wire supports, or even a stake near the plant with arms to it. Lucretia Dewberry is very trailing in its habits and supports will be very satisfactory in saving the berries from dust and rotting on the ground.

After you are through making cuttings from the asparagus beds, give them a liberal coating with well-rotted barnyard manure. Keep the weeds pulled, don't give them more than a chance to get big enough to pull out.

Have a variety of herbs in the garden. They are useful for soups and various other things. The old-fashioned medicines made of wormwood and tansy never lose their interest or usefulness. Think of the lack of appropriateness of a garden with no mint growing at the season when "mint juleps" are ripe.

In these days of enlightenment, when communities are judged by their surroundings, the rural schoolhouse should no longer be made conspicuous by its unattractiveness. A little

united effort by the farmers in a section or district could soon make the schoolhouse surroundings attractive and more inviting. Cheerful surroundings are always desirable in developing the better side of human life.

The farmer's garden is a health resort. The vegetables aid digestion and act on the system in various ways. Nearly every well known vegetable has its especial elements of value to the human system. They are effective remedies for certain ailments, and may truly be considered the very highest class of pure foods. Vegetables fresh from the garden are always better than those that have been shipped to markets because they do not undergo the heating or sweating process that is caused by being packed, etc. Generally speaking, farmers do not devote as much attention to gardens as they should. The well known seed houses sell seeds of all improved vegetables. They make a business of raising the very best vegetables that skill, science and fertile soils with proper cultivation can produce. It is always a good investment to pay good prices for the best seeds that can be obtained. During the past three years field corn has been "bred up" to a high standard, resulting in a notable increase in bushels per acre. Seedsmen have for a good many years been engaging in improving all varieties of vegetables. Garden soil cannot be too rich to get the best results. The products produced by market gardeners should be an incentive to farmers. Good dinners are as dependable on good vegetables as dairy products or meats. A little study of the seed catalogues will enable the farmer or village gardener to select such seeds as can be planted, so to have a great variety in the garden. They can also plant the seeds of early crops so that the same ground later on can be occupied with a second crop of something else. The old time method of depending on the hoe for the entire cultivation of gardens is past. The planting should be done in straight rows the long way of the garden, so that cultivation can be done with horse power. The hoe should, however, be considered indispensable in the garden, as there are many vegetables that require careful earthing up, or loosening of the soil around, tender shoots. A coop of chicks in the garden with the hen kept confined in the coop, will help keep down insect pests and both garden and chicks will be benefited. In many villages there is a spirit of friendly rivalry. Such gardens are always worth inspection and their owners are naturally proud of them.

A West Virginia writer in an exchange says: I am greatly interested in gardening. I try to make every foot of space count. Therefore when I plant my sweet corn I put pole beans in every hill and squash in every fourth hill and every fourth row. The bean vines cling to the cornstalks and thus save sticking. As to the squash vines, they literally cover the field, and when I cut the corn in the fall some nice squashes present themselves to one's eye. These three crops can be cultivated as easily as the sweet corn alone. It may seem like close cropping, and so it is, but it is very satisfactory. I am not satisfied with one crop when I can get three off the same ground.

Grafting.

Every farmer should know how to graft, not political or insurance grafting, but tree grafting. Many farms contain apple trees of quite worthless varieties which could readily be top grafted with the kinds that sell in the markets at top prices. April is a good month to do grafting in the northern States. Grafting should be done before the leaves come out. The following instructions are given in an exchange for making grafting wax:

"Rosin, 4 parts (ounces or pounds), beeswax, 2 parts, and tallow, 1 part.

"Melt the ingredients in an iron vessel of some kind over a slow fire, mixing thoroughly and taking care not to burn. When well incorporated (in half an hour or so) pour convenient portions, from time to time, into cold water, and when sufficiently cooled (in a minute or less) take out and pull, like taffy, until it becomes light-colored, when it may be made into rolls three or four inches long and an inch in diameter, for convenience in using. A little tallow—as little as possible—will be necessary on the hands in these operations to prevent sticking.

"As the sticks are made they are to be placed in another vessel of cold water, to harden, after which they can be put away in the cellar or other cool place until wanted for use.

"If the weather is cold at the time grafting is done, the wax will need to lie in moderately warm water in order to work well, but if the weather is warm it may be necessary to keep it in cool water. The operator will soon learn to regulate this.

"Care in having all the ingredients pure and manipulating properly will be rewarded with the best kind of wax."

It is a good plan to melt some of this wax and dip strips of cotton cloth in it; then, when they are cold, wrap these around the union of the graft and scion. The strips will adhere closely and will support the graft better than the mere wax, which will, at times, soften in the sunshine on warm days and thus permit the grafts to loosen in the wind.

The Spring Primer.

Do you see the Man?

The Man has some things upon his Shoulders.

Yes, so I see. But what are They?

They are Garden Tools, my Son.

What is the Man Con-tem-plating?

That is a large word my Son, but I am glad you have Sur-round-ed it. The Man Con-tem-plates doing much Garden work.

Will he do it?

Yes, he will do much Garden work in a way.

In what way?

He will spend his Time from now until the Ground is Workable planning out his Garden.

The Man will Ev-i-dent-ly do a great deal of work.

Yes, my Son, but most of it will be in his Mind.

Most people who sell eggs as a business for setting, try to have them good. They must do that if they expect to continue in business. As a rule, therefore, when eggs fail to hatch, we should carefully investigate the conditions before blaming the man from whom we purchased them,

Shull's Saunterings

At Kingston, N. Y., I called on Mr. H. R. Brigham, who is a breeder of several varieties, and expects to have plenty of good stock in the fall, and also to increase his business by a large measure.

Mr. Judson Neice, of Washington avenue, also in Kingston, is a breeder of Rose Comb Black Minorcas and Buff Plymouth Rocks, and has some good ones.

I next called on Mr. George E. Standing, also of Kingston, Mr. Standing has about 800 young chicks, and I found them all looking well and strong.

In Albany, N. Y., I called on Mr. John Etling, of Delaware avenue, who breeds several varieties of poultry and who has some very fine ones. He has his plant in Slingerlands.

I also called on Mr. Young, who is conducting the seed and poultry supply business formerly conducted by the firm of Young & Halstead. They do a large business in these lines, both wholesale and retail, and have been in business for a number of years in the same place.

From Albany I went to Slingerlands. Here I called on Mr. C. A. Houck, of Orchard Ridge Farm. Mr. Houck made me welcome and showed me around his extremely well-constructed plant. He is breeding Single Comb White Leghorns and Rhode Island Reds.

I also called on Mr. Chester Long, a breeder of S. C. White Leghorns and Rose Comb Rhode Island Reds. Mr. Long has some very fine stock and is expecting to raise several hundred chicks this season.

At Round Lake I called on Mr. Chas. Johnson, a breeder of White Leghorns and Rose Comb Black Minorcas. Mr. Johnson has about 700 head of breeding stock and they are looking fine.

At Altamont, N. Y., I called at the yards of Mr. James Hellenbeck, the White Leghorn and White Wyandotte Specialist. Mr. Hellenbeck has some very fine birds, and, if we are any judge, will have something good this fall.

At Round Lake, we called on Mr. Chester Rulison, who has been a breeder for years, and who, at present, is breeding White Leghorns, Single Comb and Rose Comb Rhode Island Reds, and Silver Spangled Hamburgs. Mr. Rulison has some very nice stock in all these varieties.

At Cambridge, the first one whom I called on was Mr. Ralph Nicholson. Mr. Nicholson is a breeder of White Rocks and breeds some very fine ones.

I next started out to see Mr. C. M. Battie, who used to be a large breeder of standard-bred poultry. While going along the street, I was hailed by

a large, good-looking man whom I found to be just the man I was looking for. Mr. Battie had some good words for the Fancier and for "Drev."

At Granville, N. Y., I called on Mr. S. H. Howland, who is a breeder of Buff Wyandottes and Rose Comb Black Minorcas. Mr. Howland has some very nice birds and has won quite a few prizes in hot competition.

Mr. E. C. Hewitt, breeder of Buff Plymouth Rocks, was next on my list. He has several nice pens of the above variety.

Arriving at Salem, N. Y., the first breeder I called on was Mr. E. W. Philo, manager of the Cycle Hatcher Company. Mr. Philo, I found to be a genuine chicken enthusiast. At present Mr. Philo has forty of his Hatchers running, and a more healthy looking lot of chicks, I have never seen together. He has chicks six weeks old that will tip the scales at two pounds. All his hatching and brooding is done by Cycle Hatchers and Brooders.

At Cobleskill, N. Y., I called at Mr. VanDresser's farm, and must say that it can not easily be beaten. They have a large main house and about ninety colony houses of their own original idea that come as near being perfect as any we have ever seen.

I also called on Mr. Allen Blodgett who breeds a large number of varieties of poultry and pigeons. Mr. Blodgett can always be trusted to bring something slick out, and is sure to be in it when the blue ribbon is passed around.

I then called on Mr. J. W. Calkins, a friend of The American Fancier and of "Drev." He is a breeder of the grand old Langshan, and expects to import quite a few this fall.

While waiting for the train, I met Mr. A. H. Saxton, a Pit Game breeder, who is breeding several strains of fighting blood.

At Livingston, N. Y., I called on Mr. Frank C. Hamm. Mr. Hamm's poultry plant is splendidly located. He is breeding Barred Plymouth Rocks and showed me some very fine pens of birds.

From here we went to Mr. Jonas Haynor's place. We found him out with the chickens. He had about 250 chicks—Barred Rocks and White Orpingtons—all looking well.

At Hudson, N. Y., I called on Mr. McKittrick, who is a breeder of Rose Comb Black Minorcas. He has shown at quite a number of good shows and has won his share of the ribbons.

At Philmont, N. Y., I called on Mr. John H. Brennan, Treasurer of the Philmont Pigeon, Poultry and Pet Stock Club. Mr. Brennan is at present breeding Partridge Wyandottes and is quite an enthusiast.

Only a short distance from Mr. Brennan's yards, is the poultry plant owned by Mr. P. Canavan, Barred Rock Breeder. Mr. Canavan can show some cracking good ones and no mistake.

At Chatham, N. Y., I called on Mr. W. A. Dardess. Mr. Dardess and Mr. George McClellan of the same place are breeding several varieties and have a very fine stock.

I found Mr. Percy M. Callender, a breeder of White Plymouth Rocks, also at home, and a very pleasant person to meet.

I also called on Mr. W. P. Pratt, who has some very nice Buff Wyandottes.

At Rifton, N. Y., I called at Woodcrest Farm, and here I found one of the most ideal places for a summer residence one could wish. I also found strictly first-class White Wyandottes, Barred Plymouth Rocks and Light Brahmas, among which was one of the best White Wyandotte cockerels I have yet seen.

At Shushan, I called on Mr. C. L. Piser, the well known Buff Wyandotte breeder. Mr. Piser has at present about 125 head of breeding stock, and they are looking fine.

I started out from Piser's and called on Mr. Andy Riddell, another Buff Wyandotte breeder. I found Andy, smiling as a rose, and he reports everything on the jump in the Buff Rock alley.

From Mr. Riddell's I called at the home of Mr. Andrew Collins, who is a breeder of Rose Comb Black Minorcas.

JOSEPH L. SHULL.

Linseed meal makes an excellent food for poultry if properly given. A pound of linseed meal, mixed in the mash, and fed to fifty hens twice a week, will promote the egg production and health of the fowls. It should not be fed more frequently than this.

There are many places on a farm, worthless for cultivation, that could be utilized with splendid results for a goose pasture. In locating a place for geese, have it near water—an unused spring or branch will be a paradise for the birds.

Poultry should not be packed until thoroughly cooled. Pack in boxes with plenty of straw between each layer. Pack the box full and put plenty of straw on top to prevent disarrangement during transportation. It is a good plan to wrap each fowl in brown or white paper before packing.

The poultry yard is now a busy place. The musical chirp of the chick makes a pleasant melody for the fancier to hear.

May is a good month for hatching the smaller breeds, but not so well for Asiatics.

Keep up the battle against lice, as this army of pests increases daily, and nothing but continual "battling" will keep them down.

The secret of success in modern business is judicious advertising.

Correct management is everything in the poultry business.

The hen is a chemist, a banker and a manufacturer.

FINE PRINTING.

We desire to call the attention of our subscribers who are in need of printed matter to our modern facilities for doing all kinds of job printing. We have a large display of type for this class of work, and our machinery is of the most improved order. Our prices are very low, much lower than can be gotten elsewhere for the same class of work. All work done by us is guaranteed to give perfect satisfaction or money will be refunded. We will be pleased to estimate on any printing that you may want, and will give you reasonable figures on same. Let us hear from you, and we will, no doubt, be able to help you get up some attractive printing and engraving that will bring you customers when nothing else will. A trial order will convince you of the merits of our work.

Ornamental Bantams

By L. W. Pinckney, Auburn, N. Y.

Not many years ago the Bantam breeder was considered a crank and not to be considered among the list of poultrymen as of any consequence. Things have changed, however, and where Bantams were formerly bred almost entirely as pets or for exhibition, they are now being bred for utility the same as the larger breeds and the Bantam breeder of to-day is on an equal footing with the breeders of the larger varieties.

A great many people may ask "in what way are Bantams bred for utility?" And I would answer as follows:

First—To the city man who likes fresh eggs and a broiler once in a while for his breakfast and who has not the room for a large variety, the Bantam is his standby as he can keep a large flock in a very small space and they stand confinement well. They are good layers, and is there anything nicer than a young Bantam as a broiler.

Second—To the man who has bred chickens all his life on a farm and retires to the city to live and wishes a few fowls to keep more as company and to have something to take his time, these little beauties are just what he wants on his limited space.

Third—To the breeders of pheasants, who wishes a fowl to hatch and raise his pheasants, there is nothing that can equal the Bantam, as they are excellent setters and make the best of mothers, and are so light they do not break the eggs or kill the young by walking on them.

Fourth—To the exhibitor who shows at five fairs and carries a large string of birds and makes his money on the prizes he wins, the Bantam is one of his main varieties, as on account of their size they are more convenient to carry from one show to another than the larger kinds.

Fifth—To the rich man who wishes a suitable pet for his children, so as to afford them pleasure and keep them out of mischief they are just the proper thing.

Sixth—And last, the man who admires beautiful things breeds them simply that he may have them to look at, the same as others breed Cavies, Fancy Pigeons, Chinese Rats, Rabbits, and other varieties of animals.

When a person starts in the Bantam business he or she should think just what he wants a Bantam to do and get the kind that comes the nearest to filling his wants and then stick to that variety.

If he wants a non-setter I think the Sebright would be his first choice, of which there are two kinds, namely, Golden and Silver, and both are very beautiful specimens of the Bantam class. If he should want a setter, the Cochins, I think, conceded by all Bantam breeders as the best setter and covers the most eggs.

the Cochins Bantams there are varieties, namely, Buff, White,

Black, Partridge and Cocoo. Of these I prefer the Black for a beginner as they breed true to color, and owing to their color do not show dirt. The Buffs, although very pretty and decidedly popular, are harder to breed to color, and the same can be said of the Partridge and Cocoo. The Whites are hard to keep looking clean, especially on a city lot.

There are a good many other varieties of Ornamental Bantams that are excellent, but space and time forbids my speaking of them at present, in fact, if you admire some one variety of large fowl and would like a Bantam of the same kind you can find almost always a Bantam that is an exact duplicate of the large variety in everything except size.

To those who are already Bantam breeders and are of the lukewarm kind, I would say, wake up, join some Bantam Association, if convenient offer some special prize on them at some poultry show, and talk Bantam all the time and help push the variety you admire. Be honest with all your dealings with the beginner and set a good example for him to follow.

Help the good cause along is a good motto for all Bantam breeders to follow.

International Bantam Breeders Club.

The International Bantam Breeders Club seems to have less of the approval of "Uncle Dudley" than I wish it did. In regard to the Club and Eastern Bantam breeders I want to write a few words, not in a controversial way, but by way of explanation.

I am responsible for the letters in "several languages" inviting Eastern breeders to join the Club. Those letters brought members, so that the International is now almost, if not quite, as strong in the East as in the West. Among the Eastern members are some of the leading Bantam breeders and a number of the breeders who win regularly at Madison Square, where the National Bantam Club holds its annual meeting.

Now, to hold a club show is only one-half of the work of the International. We are striving to promote an interest in Bantam raising all over the country, and in order to do this we have just issued a neat little catalogue, and offer cups in the various States as well as at the Club show. If I am not mistaken, the National Bantam Association confines its work to bringing out a large display at Madison Square. No wonder then that the National, by devoting itself to the one object, can get out a large display at their Club show. But, since the International undertakes much more, it should not be even mildly criticised for not getting out such a large display at Chicago. We hope that our finances and influence will be such, however, that we may do

more than ever to make the Chicago Show a Bantam center. I might say in this connection that I have the kindest feelings for the National Club, and prize my membership in it very highly.

What we want is for all breeders of Bantams in the East and West, in Canada, in short, everywhere, to join the International and help in popularizing the Bantam fowl. We have a good start, as the roll of membership in our catalogue will show, and by adding more members to the club we can do still more. We want every Bantam breeder to send for the club catalogue and see what we are doing.

FRANK W. RADFORD,
Secretary.

Oshkosh, Wis.

HER PEDIGREE.

"Now who is that?" asked the dignified hen;
"That chicken in white and gray?"
"She's very well dressed, but from whence did she come?"
"And her family, who are they?"
"She never can move in our set, my dear,"
Said the old hen's friend to her, later;
"I've just found out—you'll be shocked to hear—
"She was hatched in an incubator!"

Hens are early risers and should be fed as soon as they come off the roost. A good plan is to have a scratching pile arranged with a few handfuls of wheat or shorts scattered over it for the hens to scratch for. Start a hen at her work early in the morning and she will invariably lay before sundown.

NOTICE TO CORRESPONDENTS AND ADVERTISERS.

Owing to the increasing circulation of The American Fancier, together with a corresponding demand upon our advertising columns, correspondents and advertisers are notified that all communications should reach the New York office of The American Fancier, Havemeyer Building, No. 26 Cortlandt Street, or to Ossining, N. Y., before 4:30 o'clock, P. M., on Monday of each week, in order to secure insertion in the current issue of the paper.

DATES CLAIMED.

Under this heading there will appear each week a list of all the shows claiming dates for the coming season. Secretaries of poultry, pigeon and pet stock exhibitions will confer a favor by sending in the dates selected as promptly as possible. It is not only a convenience and guide to secretaries of shows that have not selected their dates, but of great interest to readers of The American Fancier, a majority of whom are exhibitors.

The name of secretary and judges will be appreciated when sending in notices.

Aug. 21-24—Cortlandt, N. Y. Cortlandt County Agricultural Society, W. J. Greenman, Secretary.

Sept. 3-6, Taunton, Mass., E. P. Washburne, Pigeon Judge and President.

Sept. 11-13, Mercer, Pa. Mercer County Fair and Poultry Show. T. E. Orr, Judge; John P. Orr, Secretary.

Sept. 17-22, North Yakima, Wash. State Fair, G. A. Graham, Secretary; Harry H. Collier, Superintendent Poultry.

Sept. 24-29, Spokane, Wash. Inter-State Fair, Robt. H. Cosgrove, Secretary.

October 2-5, Chatham, N. Y. Columbia County Agricultural Society, W. A. Dardess, Secretary.

Nov. 12-17—Houston, Tex., Howey S. Fox, Jr., Secretary.

Nov. 12-17, San Jose, Cal. Santa Clara Valley Poultry and Pet Stock Association, E. Van Every, Secretary, Edenvale, Cal.

Mr. L. P. Clark, Superintendent of Rosemary Farm, Huntington, L. I., writes that he has purchased the entire stock of H. B. Swarner's White Indian Games. Mr. Swarner for a number of years bred and exhibited a fine strain of the latter, and Mr. Clark did well to add them to his own grand collection.

Ferdinand Bulldog Zimmer, the retired adjudicator of fowls, writes from his Gloversville, N. Y. bungalow, as follows: "The imported birds came a week ago on the Victorian. A grand lot and every bird in the pink of condition and laying. If I don't raise some Red Pyles, and more particularly Black Red Bantams, this year, then ask me." Fred Y. Parfrey, of Richland Center, Wis., has all the Silver and a part of the Golden Sebrights of this importation and expects to raise some of the same sort; he also had two old British bulldogs come over with them. It seems as if the famous Bantam and Beagle fancier has caught the Bulldog fever in a most violent form. For several years past, the master of Debonair has been quietly at work gathering up a stud of these popular canines and promises to make some fast running for other fanciers of the latter in the near future. The three "B's" Beagles, Bulldogs and Bantams, will keep "Shorty Z." a very busy man from

now on. "Zim" is through with judging chickens for good and always.

This reminds us that Senator A. F. Peirce, of Winchester, N. H., will also retire from the field as a poultry judge, officiating at only a few leading shows next season. Mr. Peirce's cattle business has become so important and takes up so much of his time that he feels compelled to forego the pleasure and work of the chicken gatherings. We are sorry to lose "Alec" Peirce as a judge, for there is no more conscientious or better one, but hope he will find it possible to meet once a year with the "old guard," of which he was a loyal and honored member.
